### MultiTrans 7 Release Notes

### New features and enhancements

Here are the new features and enhancements available in MultiTrans 7.

#### Integration with SDL Trados Studio

Users can connect to MultiTrans from directly within Trados Studio.

Tasks worked on using this MultiTrans/Trados Studio connector are tracked within the MultiTrans audit trail to offer continued traceability.

#### **Usability Enhancements**

Performance has been improved in a variety of areas of the Customer Portal including project submission and various searches.

MultiTrans has added flexibility on accepting more tags in a target segment than the originating source segment for documents translated within Trados Studio.

The look and feel of the MultiTrans Web Editor has been updated to match the fresher look of the MultiTrans workflow applications.

#### **REST API Enhancements**

A variety of additions have been made to the public REST API, including more secure authentication methods, provider authentication allowed (restricted to the provider's own data), and new metadata and information available when retrieving tasks using the **getTasks** method. Better error messaging is available when incorrect query parameters are sent to **getProjectDetails** and **getLanguageList**.

### Program updates

- 1. (48546) SDLXLIFF files can be pre-translated using the **Flow Machine Task MultiTrans Pretranslation**.
- 2. (48682) The Web Editor **Non-translated segments** filter properly identifies segments containing tags.
- 3. (48857) The **Extract Excel worksheet names for translation (XLSX, XLS)** option is used correctly and the target file generated with no errors.
- 4. (48773) \*.DOC files can be successfully exported following translation when the **Skip hidden text** option is selected in the XLIFF Editor.
- 5. (47630) An unexpected exception is no longer causing files processed in the Web Editor to require manual repair.
- 6. (4487) Unclosed tags cannot be generated in \*.DOCX files, allowing the proper export back to the source format from XLIFF.
- 7. (48797) The MultiTrans Analysis gives results for a number of files that were previously not accepted.
- 8. (48803) Some unnecessary logging has been removed from the flow.log allowing easier troubleshooting of potential issues.

# SDL\*

## **About SDL**

SDL (LSE:SDL) is the global innovator in language translation technology, services and content management. With more than 25 years of experience, SDL delivers transformative business results by enabling powerfully nuanced digital experiences with customers around the world. Find out more at **sdl.com**
