

XPP 9.7 & XPP RESTful Web Services API 1.2 Available Now!

March 22, 2024

We are pleased to release these new XPP versions which contain new features, feature enhancements, new platform support and, of course, security mitigations which are a focus with every product release.

In addition, we're announcing some exciting changes we've made that will promote increased engagement and collaboration across the XPP community!

Reference the [XPP 9.7 Release Notes](#) for details. Here are just a few highlights!

Dynamic Recomposition – Powerful New Feature

This new feature allows users to define a scope of content that can be recomposed to produce a specific outcome based on the results of processing that occurred within that user defined scope. Specific use cases can yield significant performance improvements when this capability is implemented.

OpenType font – transition completion

We have finished the transition from distributing and using Type 1 fonts to distributing and using Noto OpenType fonts.

Customer Engagement

Coincident with these releases, we are excited to introduce our new distribution method for sample jobs, on Github. This is where we will provide examples that highlight new features as they are released and jobs that illustrate best practice transformation and formatting for often requested production requirements.

These samples will serve as the foundation for the subsequent stage of our initiative, which aims to extend this platform to the wider XPP community to contribute and share their own examples.

In addition, we are launching a refresh of the XPP Community with improved organization for faster access and navigation and to strengthen direct engagement with our users.

Any maintenance customer currently using XPP 9.x is entitled to this new version release.

To initiate the ordering and delivery of this version release, please open a support ticket through the RWS Customer Support Web Portal.

Effective with the XPP 9.7 version, the release status will be:

- Full Support: XPP 9.7 & XPP 9.6.2
- Full Support: XPP RESTful WS 1.2
- Retired: XPP 9.6.1 and previous
- Retired: XPP RESTful WS 1.1 and previous

Customers running on retired releases should consider upgrading soon as although we may still be able to provide technical support, we are not able to provide Hot Fixes for a retired version release.

Should you have any questions concerning this announcement, please do not hesitate to contact Customer Support.
