

XPP RESTful Web Services v1.3 Available Now!

June 7, 2024

XPP RESTful Web Services v1.3 contains a roll-up of issue fixes. Any XPP 9.x maintenance customer is entitled to this new version release.

We encourage you to upgrade to this latest version release, even if you have already received Hot Fix patches. We ask that you review the Release Notes which are available here: [XPP RESTful Web Services Documentation](#)

To initiate the ordering and delivery of this version release, please open a support ticket through the RWS Customer Support Web Portal.

Effective with this version, the release status will be:

- Full Support: XPP RESTful Web Services 1.3
- Retired: XPP RESTful Web Services 1.2 and earlier

Customers running on retired releases should consider upgrading soon as although we may still be able to provide technical support, we are not able to provide Hot Fixes for a retired version release.

Should you have any questions concerning this announcement, please do not hesitate to contact Customer Support.
