

XPP 9.8.2 Service Pack released!

March 6, 2026

We are pleased to announce the release of this service pack.

This is an important update for customers using XPP on MS Windows environments that have implemented a Zero Trust security policy. Building on the previous service pack release (9.8.1) that introduced code signing improvements for the executables, this extends the signing to the ancillary libraries (DLLs) as well. This is covered by DigiCert certificates under the RWS certificate authority.

A small set of bug fixes are also included in this release, please see the release notes for more details.

Reference the [XPP 9.8.2 Release Notes](#) for details on this and other updates.

Any maintenance customer currently using XPP 9.x is entitled to this new version release. To initiate the ordering and delivery of this version release, please open a support case at [RWS Customer Support](#).

The release status effective with XPP 9.8.2 is:

- Full Support: XPP 9.8.2, XPP 9.7 & XPP 9.6.3
- Full Support: XPP RESTful WS 1.7
- Retired: XPP 9.6.2 and previous
- Retired: XPP RESTful WS 1.6 and previous

Customers running on retired releases should consider upgrading as soon as possible, although we may still be able to provide technical support, we are not able to provide Hot Fixes for a retired version release.

If you have questions, please open a support case at [RWS Customer Support](#).
