

Tridion Docs 15.1 Bootcamp AI, Platform Support and Client Tools

Andriy Zhidko, Product Owner

Ivo van de Lagemaat, Product Owner and Architect

22 April 2024

Agenda

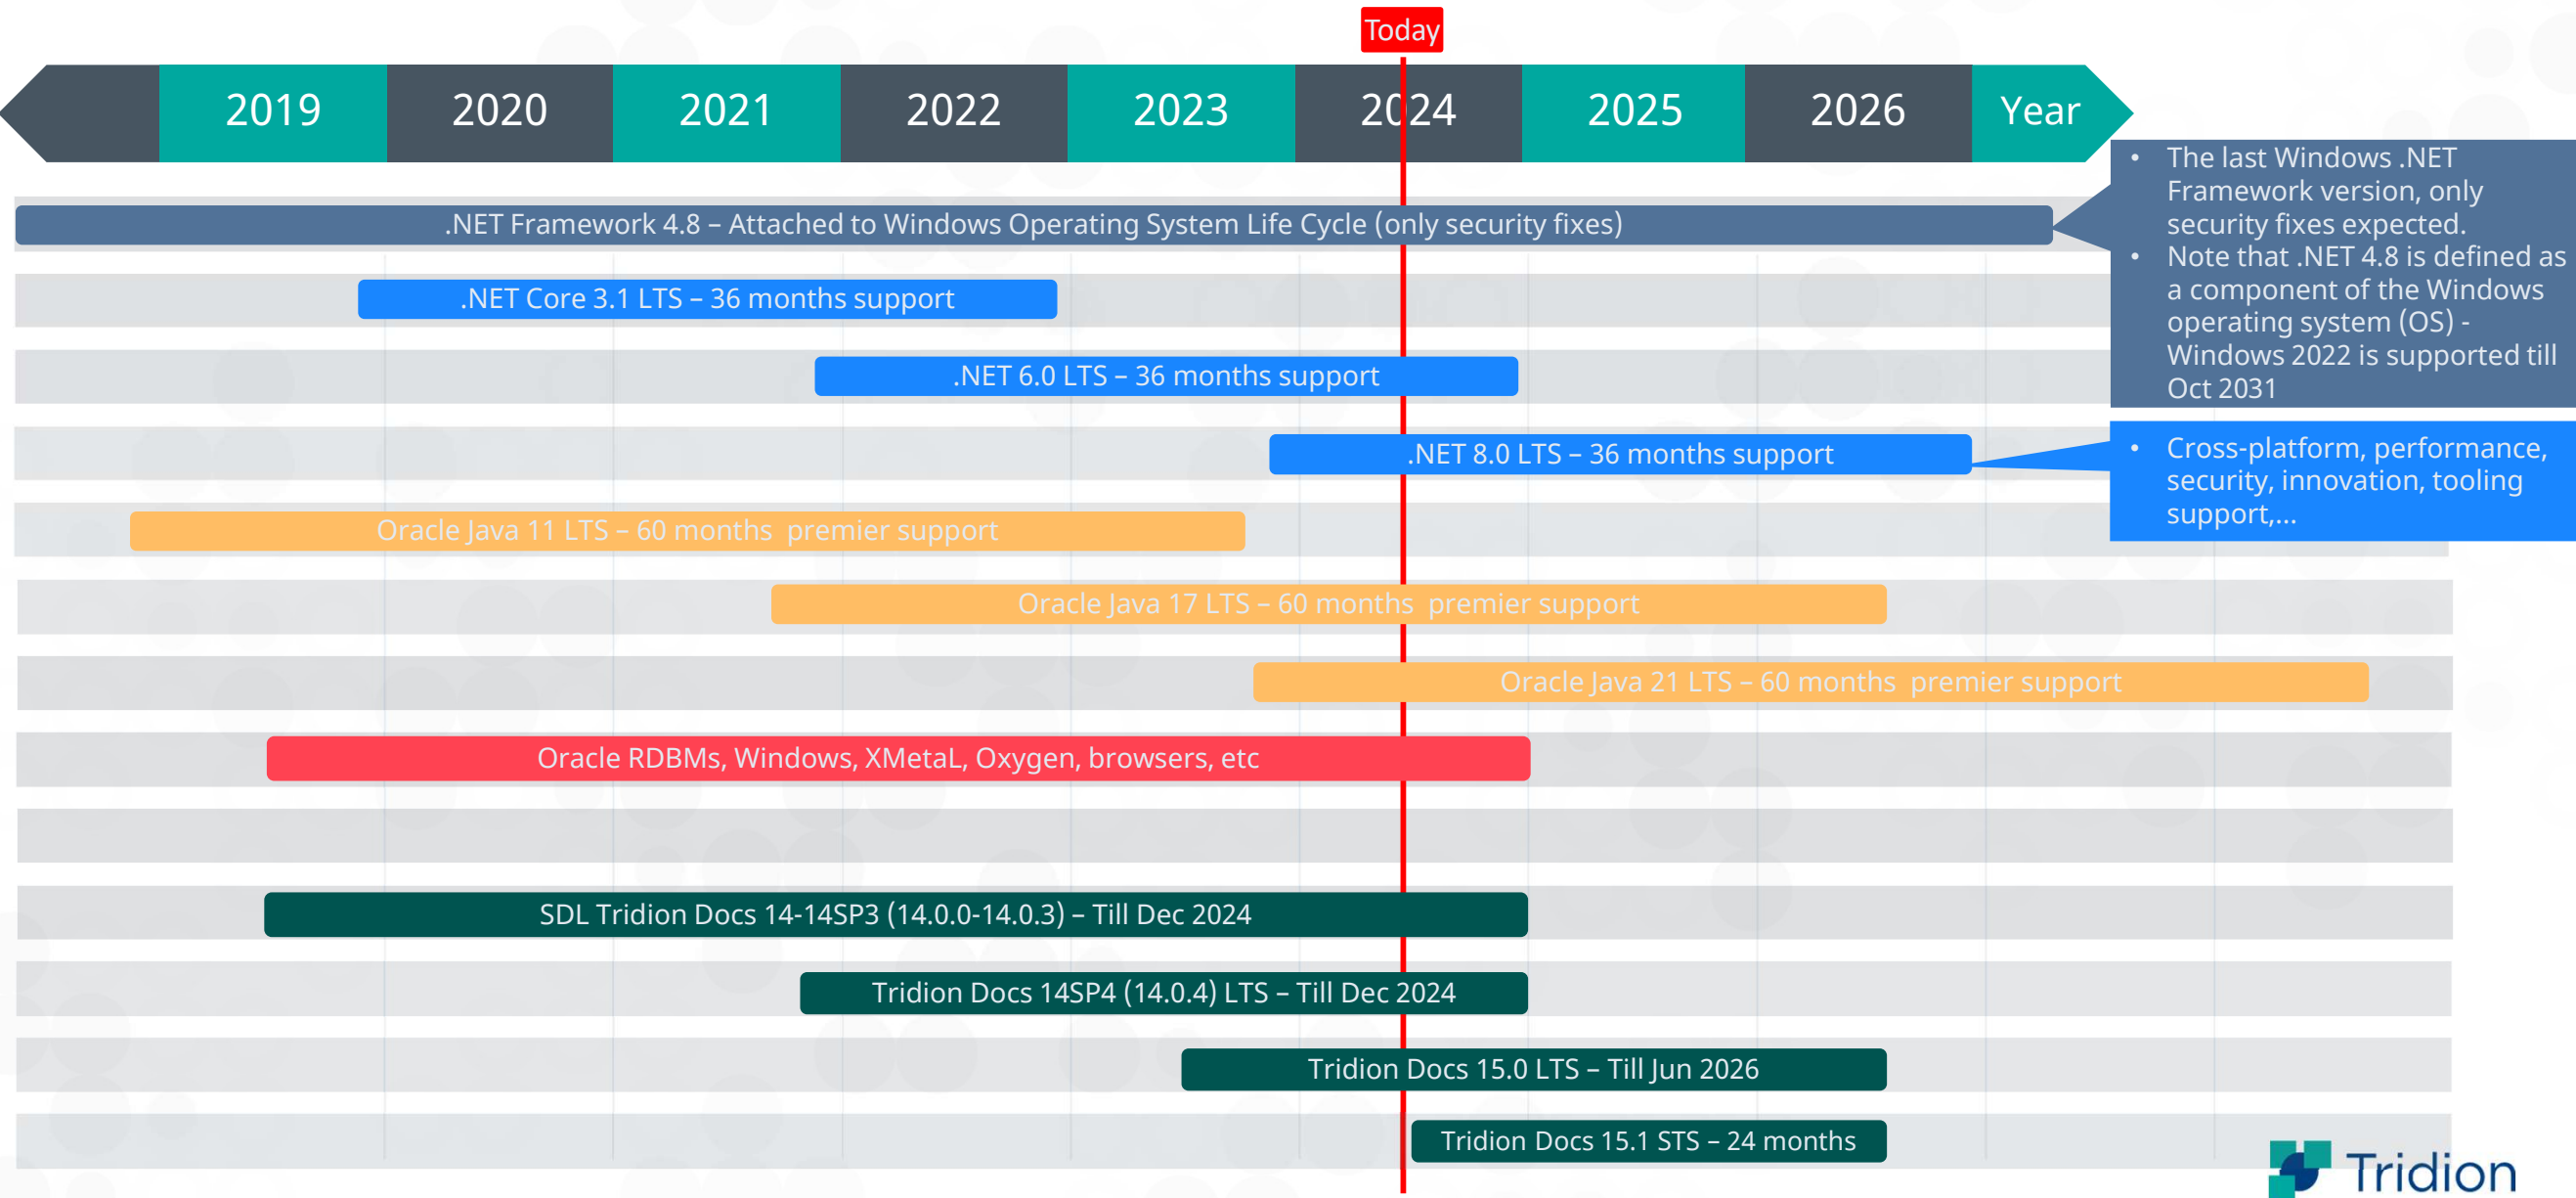

- Platform Support
- AI
- Metrics
- Display name
- Modern Authentication
- Vulnerabilities
- ISHDeploy
- ISHRemote
- Client Tools
- Community Ideas

Platform Support

Platform Support – Support Cycles

Platform Support Applied and some History

15.1.0 Era

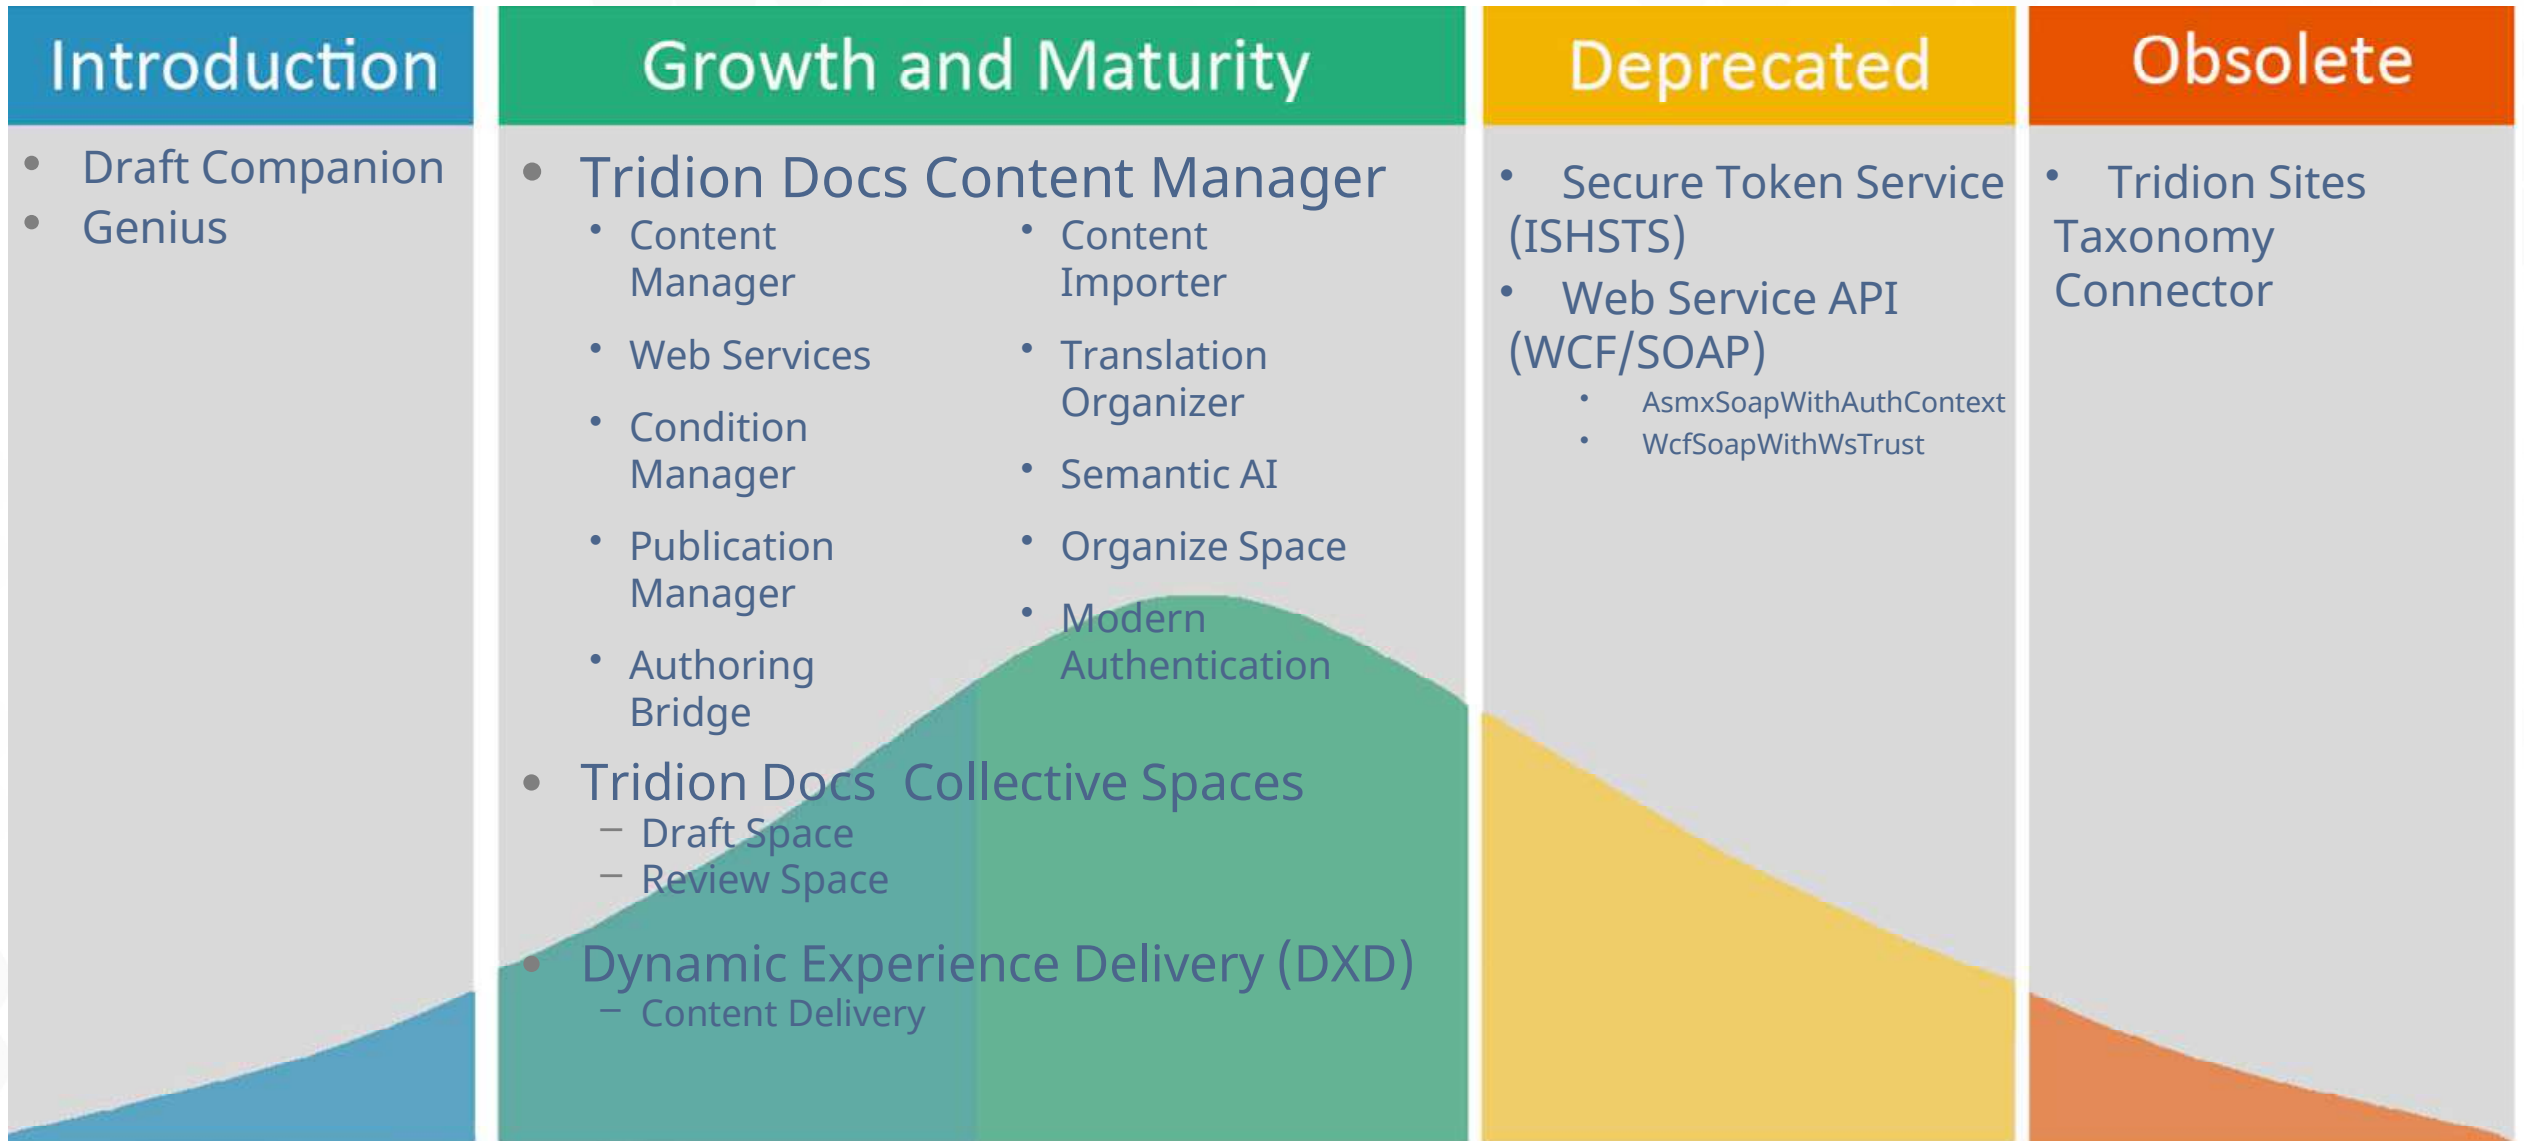

InfoShare release	Released in ...	See http://www.rws.com/support/
Former policy, the one about full (2 year), limited (2 year) and extended (best effort) support		
SDL Trisoft 2011R2 (9.2)	July 2011	Retired: Limited support ended December 2014
SDL LiveContent 2013 (10.0)	December 2012	Retired: Limited support ended July 2016
SDL LiveContent 2014 (11.0)	July 2014	Retired: Limited support ended December 2017
SDL Knowledge Center 2016 (12.0)	December 2015	Retired: Limited support ended July 2020
SDL Tridion Docs 13 (13.0)	November 2017	Retired: Limited support ended July 2021
SDL Tridion Docs 14-14SP3 (14.0.0-14.0.3)	July 2019	Fully supported until December 2024
New Policy, the one about Short Term (2 year) or Long Term (3 year) Releases		
Tridion Docs 14SP4 (14.0.4) LTS	November 2021	Fully supported until December 2024
Tridion Docs 15 (15.0.0) LTS	July 2023	Fully supported until July 2026
Tridion Docs 15.1 (15.1.0) STS	July 2024	Fully supported until July 2026

- Customer Support for 2016/12.0.x will remain available until March 2021, although Hot Fixes will no longer be released for this version after July 2020

- 14SP3/14.0.3 was released 29 Nov 2020 plus 2 years full and 2 years limited brings us to December 2024
- 14SP4/14.0.4 was released 23 Nov 2021 plus 3-year long term release support brings us to December 2024

...predication...

Platform & Integrations – Deprecated & Obsolete

Windows Server

- Supported
 - Windows 2022
 - Windows 2019
- Not Supported
 - Windows 2016
 - Windows 2012R2/x64

SQL Server

Microsoft®
SQL Server®

- Supported
 - SQL Server 2022
 - SQL Server 2019
- Not Supported
 - SQL Server 2017
 - SQL Server 2016 SP2

Oracle

- Supported
 - Oracle 19c
- Not Supported
 - Oracle 23c
 - Oracle 12c
 - Oracle 12.2
 - Oracle 18c

Translation Systems

- TMS
 - Supported
 - 12.x
 - Deprecated
 - 11.x
- WorldServer
 - Supported
 - 11.x
- Trados Enterprise

Java

- Supported
 - Adoptium Eclipse Temurin 21
 - Oracle Java 21
 - Adoptium Eclipse Temurin 17
 - Oracle Java 17
- Not Supported
 - Java 8
 - Java 9
 - Java 10
 - AdoptOpenJDK 11
 - Oracle Java 11

Browsers

- Supported
 - Microsoft Edge (Chromium)
 - Release update channel
 - Chrome
 - Release update channel
 - Firefox
 - Release update channel
- Not Supported
 - Microsoft Edge Spartan
 - Microsoft Internet Explorer
 - 10
 - 11

SOLR

- Solr version 9.4.1

Configuration Quick Start Settings

Configuration Quick Start Settings / File	14.0.0 Config Version	14.0.1 Config Version	14.0.4 Config Version	15.0.0 Config Version	15.1.0 Config Version	What has changed
Admin.XMLAIAssistantConfiguration.xml					1.0	<i>New Draft Companion configuration</i>
Admin.XMLBackgroundTaskConfiguration.xml	1.1	1.1	1.1	2.0	3.0	<i>Remove support for Appdomain isolation level New metrics plugins</i>
Admin.XMLChangeTrackerConfig.xml	1.0	1.0	1.0	1.0	1.0	<i>Nothing</i>
Admin.XMLCollectiveSpacesConfiguration.xml	1.0	1.0	1.0	1.0	1.1	<i>New settings: reviewresolution for reviewing images using the specified resolution</i>
Admin.XMLDeleteObjPluginConfig.xml					1.0	<i>New IDelete plugins driving Metrics and more</i>
Admin.XMLElementExtensionConfiguration.xml	1.0	1.0	1.0	2.0	2.0	<i>Allows metadata fields binding to Tridion Docs taxonomy</i>
Admin.XMLInboxConfiguration.xml	1.0	1.0	1.0	2.0	2.0	<i>Nothing</i>
Admin.XMLPluginConfig.xml	1.0	1.0	1.0	--	--	<i>Removed, COM+ plugins are not supported anymore</i>
Admin.XMLPublishPluginConfiguration.xml	1.0	1.0	1.0	1.0	1.0	<i>Nothing</i>
Admin.XMLReportConfiguration.xml				1.0	1.0	<i>Nothing</i>
Admin.XMLStatusConfiguration.xml	3.0	3.0	3.0	3.0	3.0	<i>Nothing</i>
Admin.XMLTranslationConfiguration.xml	2.1	2.1	2.1	2.1	2.1	<i>Nothing</i>
Admin.XMLTaxonomyConfiguration.xml					1.0	<i>New built-in taxonomy configuration</i>
Admin.XMLWriteObjPluginConfig.xml	2.0	2.0	2.0	2.0	2.0	<i>Allows IWrite plugins driving Metrics and more</i>

.NET

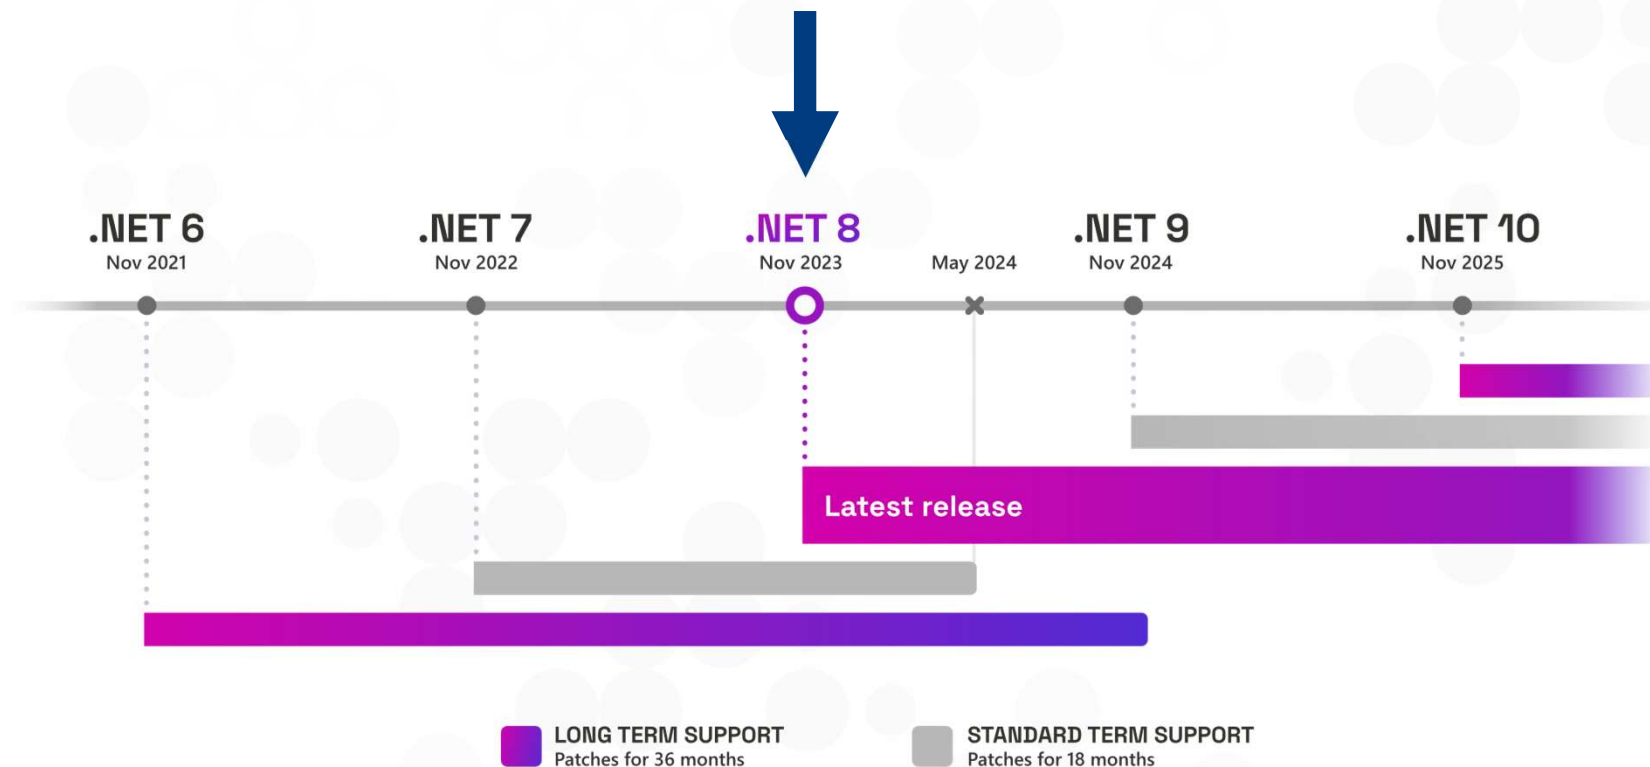

.NET

- Supported
 - .NET 8.0 (Hosting bundle)
 - .NET Framework 4.8
- Not Supported
 - .NET Framework 4.7.2
 - .NET Framework 4.6.2

.NET 8 Migration

- Tridion Docs 15.1 will be released with .NET 8
- Target frameworks and packages are updated
- Installing Windows .NET 8 hosting bundle is required

Converting Applications to .NET 8

- Configuration changed from XML to JSON (appsettings.json)
- ISHDeploy is adapted to work on the new configuration files
- Tridion Docs Services can be run from command line
- Windows Registry is still required
 - {application}.dll.config

```
<?xml version="1.0" encoding="utf-8" ?>
<configuration>
  <appSettings>
    <add key="ApplicationName" value="InfoShareAuthor" />
  </appSettings>
</configuration>
```

.NET 8 - Background Task

- Only None and Process isolation levels are supported
 - No support for Appdomain isolation level and background task configuration validation is aware of it
- Fixed known issue related to IPC
- Reusing **BackgroundTask.exe** for process isolation, No more **BackgroundTaskIso.exe** in Windows Task Manager
- Background task service configuration migrated to appsettings.json

Background task -> appsettings.json

```
{
  "BackgroundTask": {
    "Variables": {
      "ISHPROJECTAPPPATH": "D:\\InfoShare\\App",
      "ISHPROJECTDATAPATH": "D:\\InfoShare\\Data",
      "ISHPROJECTWEBPATH": "D:\\InfoShare\\Web",
      "JAVA_HOME": "C:\\Program Files\\Eclipse Adoptium\\jdk-17.0.8.7-hotspot"
    }
  }
}
```

Background task XML Settings

```
<handler eventType="PUBLISHDATEDELIVERY">
  <scheduler executeSynchronously="false" />
  <authorization type="authenticationContext" />
  <execution timeout="1.00:00:00" recoveryGracePeriod="00:30:00" isolationLevel="Process" />
  <activator>
    <net name="Publish">
      <parameters>
        <parameter name="exportlocation">%ISHPROJECTDATAPATH%\\Publish\\Data</parameter>
      </parameters>
    </net>
  </activator>
  <errorHandler maximumRetries="3" />
</handler>
```

.NET 8 - Crawler and Solr Lucene Service

- No changes to Crawler configuration
- Trisoft Solr Lucene service improved heartbeat
- Trisoft Solr Lucene service configuration migrated to appsettings.json

```
TrisoftSolrLucene -> appsettings.json
{
  "SolrService": {
    "HeartBeatInterval": "00:01:00",
    "HomeDirectory": "D:\\InfoShare\\Data\\TrisoftSolrLucene\\SolrLuceneCatalog",
    "WorkingDirectory": "D:\\InfoShare\\App\\Utilities\\SolrLucene\\server",
    "AllocatedMemorySize": "1g",
    "ServicePort": "8080",
    "StopKey": "secretpasswordtostopsolr"
  }
}
```

.NET 8 - Translation Builder

- Translation Builder service configuration migrated to appsettings.json

Translation Builder -> appsettings.json

```
{
  "TranslationBuilderSettings": {
    "MaxObjectsInOnePushTranslation": 1000,
    "MaxTranslationJobItemsCreatedInOneCall": 10000,
    "MaxTranslationJobItemsUpdatedInOneCall": 100,
    "CompletedJobLifeSpan": "90.00:00:00.000",
    "JobProcessingTimeout": "01:00:00.000",
    "UserName": ".\\InfoShareService",
    "Password": "Tr1dion",
    "JobPollingInterval": "00:05:00.000",
    "PendingJobPollingInterval": "00:15:00.000",
    "UpdateLeasedByPerNumberOfItems": 100
  }
}
```

.NET 8 - Translation Organizer

- Translation Organizer Configuration

Translation Organizer -> appsettings.json

```
{
  "TranslationOrganizer": {
    "DumpFolder": "D:\\InfoShare\\Data\\TranslationOrganizer\\Temp",
    "MaxTranslationJobItemsUpdatedInOneCall": 100,
    "JobPollingInterval": "00:05:00.000",
    "PendingJobPollingInterval": "00:15:00.000",
    "SystemTaskInterval": "00:10:00.000",
    "AttemptsBeforeFailOnRetrieval": 3,
    "UpdateLeasedByPerNumberOfItems": 100,
    "RetriesOnTimeout": 3,
    "SynchronizeTemplates": true,
    "RequestTimeout": "00:02:00.000"
  },
  "AccessManagement": {
    "ClientId": "ServiceUser",
    "ClientSecret": "tridion",
    "AccessManagementUrl": "https://demo.tridion-docs.com/ISHAM",
    "InfoShareWsUri": "https://demo.tridion-docs.com/ISHWS/OWcf/",
    "InfoShareWsServiceCertificateValidationMode": "ChainTrust"
  },
  "CertificateValidationOverride": {
    "CertificateValidators": [
      {
        "HostNameRegex": "tridion-docs",
        "SslPolicyError": "RemoteCertificateNameMismatch"
      }
    ]
  }
}
```

.NET 8 - Translation Organizer

- Translation Organizer World Server Configuration

Translation Organizer -> appsettings.json

```
{
  "WorldServer": {
    "Instances": [
      {
        "Alias": "Worldserver",
        "Uri": "http://worldserver.example.com:8080/ws-api",
        "UserName": "example",
        "Password": "example",
        "ExternalJobMaxTotalUncompressedSizeBytes": 5242880,
        "RetriesOnTimeout": 3,
        "ApiProtocol": "rest",
        "Mappings": [
          {
            "TrisoftLanguage": "en-us",
            "WorldServerLocaleId": "1145"
          },
          {
            "TrisoftLanguage": "nl-nl",
            "WorldServerLocaleId": "1147"
          }
        ]
      }
    ]
  }
}
```

.NET 8 - Translation Organizer - TMS Configuration

Translation Organizer -> appsettings.json

```
{
  "Tms": {
    "Instances": [
      {
        "Alias": "Tms",
        "Uri": "http://tms.example.com/",
        "UserName": "example",
        "Password": "example",
        "AuthenticationMode": "UserCredentials",
        "ExternalJobMaxTotalUncompressedSizeBytes": "5242880",
        "RetriesOnTimeout": "3",
        "ApiKey": "keykey",
        "Secret": "secret",
        "Mappings": [
          {
            "TmsLanguage": "EN-US",
            "TrisoftLanguage": "en-us"
          },
          {
            "TmsLanguage": "NL",
            "TrisoftLanguage": "nl-nl"
          }
        ]
      }
    ],
    "Templates": [
      {
        "TemplateId": "REPLACE_WITH_ACTUAL_CONFIGURATIONID",
        "TemplateName": "REPLACE_WITH_MEANINGFUL_TEMPLATE_NAME"
      }
    ],
    "GroupingMetadata": [
      {
        "Name": "groupingName",
        "Level": "groupingLevel",
        "ValueType": "groupingValue"
      }
    ]
  }
}
```

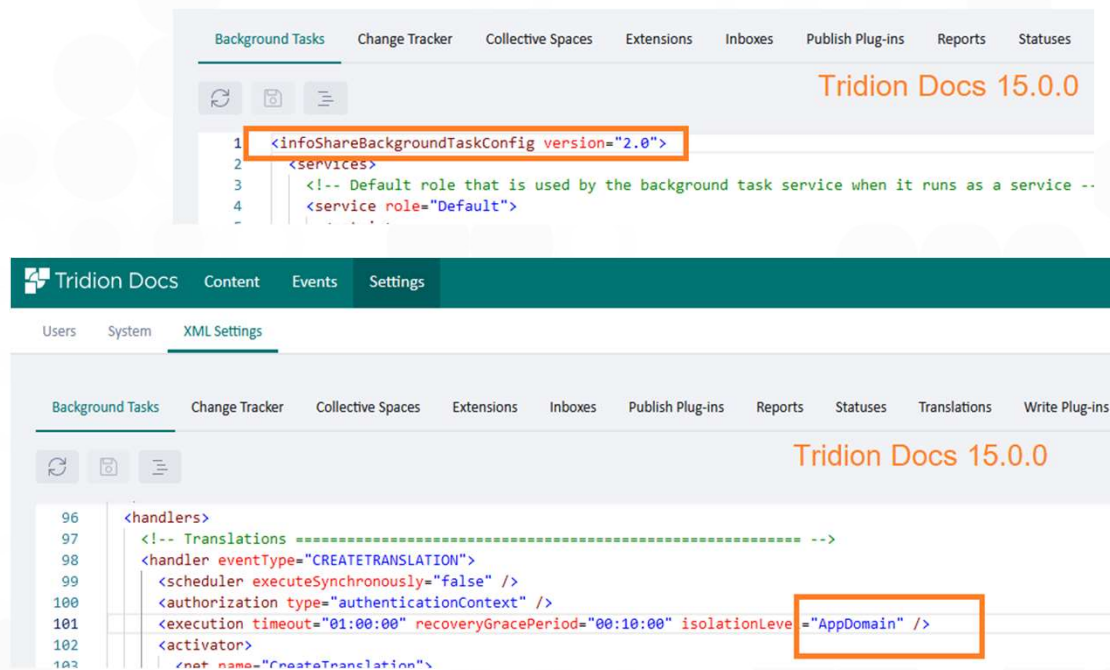

XML System Configuration Changes

XML Settings automatically migrated

- XML Settings are validated using a schema
- New Tridion Docs versions could change the schema for one or multiple XML Settings which could lead to invalid XML Settings
- Tridion Docs updates when reading invalid XML Settings
 - Tridion Docs knows what changed in the schema and updates invalid XML Settings with good defaults.
- Updating XML Settings with API / Organize Space is validated against the schema (behavior remains the same)
- Only supported when upgrading from version 15.0 onwards

Background Task Service XML Configuration Transformation

- Automatically transform configuration from **v2.0 and higher** to **v3.0**.
- Transformation happens when **BackgroundTask** service is started or when configuration is opened through **OrganizeSpace**.
 - Isolation level **AppDomain** is replaced by **Process**

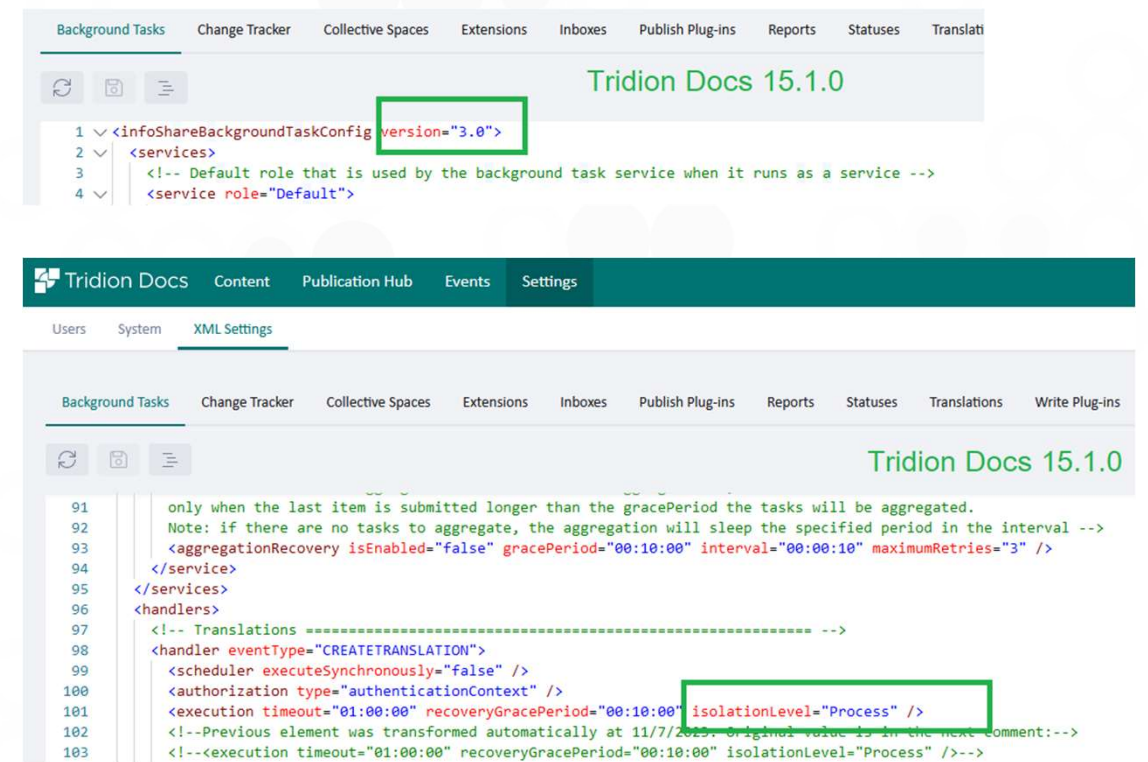

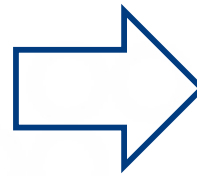

Tridion Docs 15.0.0

```
1 <infoShareBackgroundTaskConfig version="2.0">
2   <services>
3     <!-- Default role that is used by the background task service when it runs as a service -->
4     <service role="Default">
```

Tridion Docs 15.0.0

```
96 <handlers>
97 <!-- Translations ----- -->
98 <handler eventType="CREATETRANSLATION">
99   <scheduler executeSynchronously="false" />
100  <authorization type="authenticationContext" />
101  <execution timeout="01:00:00" recoveryGracePeriod="00:10:00" isolationLevel="AppDomain" />
102  <activator>
103    <!-->
```

Tridion Docs 15.1.0

```
1 <infoShareBackgroundTaskConfig version="3.0">
2   <services>
3     <!-- Default role that is used by the background task service when it runs as a service -->
4     <service role="Default">
```

Tridion Docs 15.1.0

```
91 only when the last item is submitted longer than the gracePeriod the tasks will be aggregated.
92 Note: if there are no tasks to aggregate, the aggregation will sleep the specified period in the interval -->
93 <aggregationRecovery isEnabled="false" gracePeriod="00:10:00" interval="00:00:10" maximumRetries="3" />
94 </service>
95 </services>
96 <handlers>
97 <!-- Translations ----- -->
98 <handler eventType="CREATETRANSLATION">
99   <scheduler executeSynchronously="false" />
100  <authorization type="authenticationContext" />
101  <execution timeout="01:00:00" recoveryGracePeriod="00:10:00" isolationLevel="Process" />
102  <!--Previous element was transformed automatically at 11/7/2023. Original value is in the next comment:-->
103  <!-->
```

Keep the services running

- Tridion Docs Services keeps running when handling invalid configuration
 - Handling invalid configuration is logged
 - Waits 60 seconds and tries again

TranslationBuilder Service Resiliency Improvements

Tridion Docs services shouldn't fail to start when having invalid XML settings according to the schema.

TranslationOrganizer Service Resiliency Improvements

Tridion Docs services shouldn't fail to start when having invalid XML settings according to the schema.

The screenshot shows the 'XML Settings' page in Tridion Docs. The 'Translations' tab is active, displaying an XML configuration for 'infoshareTranslationConfig'. The XML is invalid due to a missing closing tag for the 'resolution' element. A blue arrow points from this XML snippet to the log file below.

```
<infoshareTranslationConfig version="2.1">
  <parameters>
    <parameter name="ResolutionRestriction">
      <!--resolution ishvalue="element">VRESLOW</resolution>
      <resolution>High</resolution-->
    </parameter>
  </parameters>
  <translationobject>
    <copyfromsource>
      <ishfields ishcondition="ISHType in ('ISHMasterDoc', 'ISHModule', 'ISHLibrary')">
        <!-- Copy system fields -->
        <ishfield name="FISHWORDCOUNT" level="lng" />
        <ishfield name="FISHCONDITIONS" level="lng" />
        <ishfield name="FISHLINKS" level="lng" />
      </ishfields>
    </copyfromsource>
  </translationobject>
</infoshareTranslationConfig>
```

The screenshot shows a log file named 'TranslationOrganizer_pid23112_20231108.log'. The log contains the following information:

- Trisoft InfoShare TranslationOrganizer program is starting...
- Starting Environment Statistics...
- Assembly: TranslationOrganizer, Version=15.1.0.0, Culture=neutral, PublicKeyToken=555d9fcb450e0935
- CommandLine: C:\Stash\trisoft\Server.App\Applications\TranslationOrganizer\TranslationOrganizer\bin\Debug\net6.0\TranslationOrganizer.dll --console
- CurrentDirectory: C:\Stash\trisoft\Server.App\Applications\TranslationOrganizer\TranslationOrganizer
- SystemDirectory: C:\WINDOWS\system32
- MachineName: KIEDEVSBHUNL02
- OS: Microsoft Windows NT 10.0.19044.0
- OSVersion Platform Version: Win32NT 10.0.19044.0
- ProcessorCount: 12
- UserDomainName\Username: GLOBAL\sbihun
- UserInteractive: True
- .NET Common Runtime Version: 6.0.18

The log also shows several warning messages indicating that the received configuration is not valid and that the next attempt to receive the configuration will be in 60 seconds.

```

Metrics

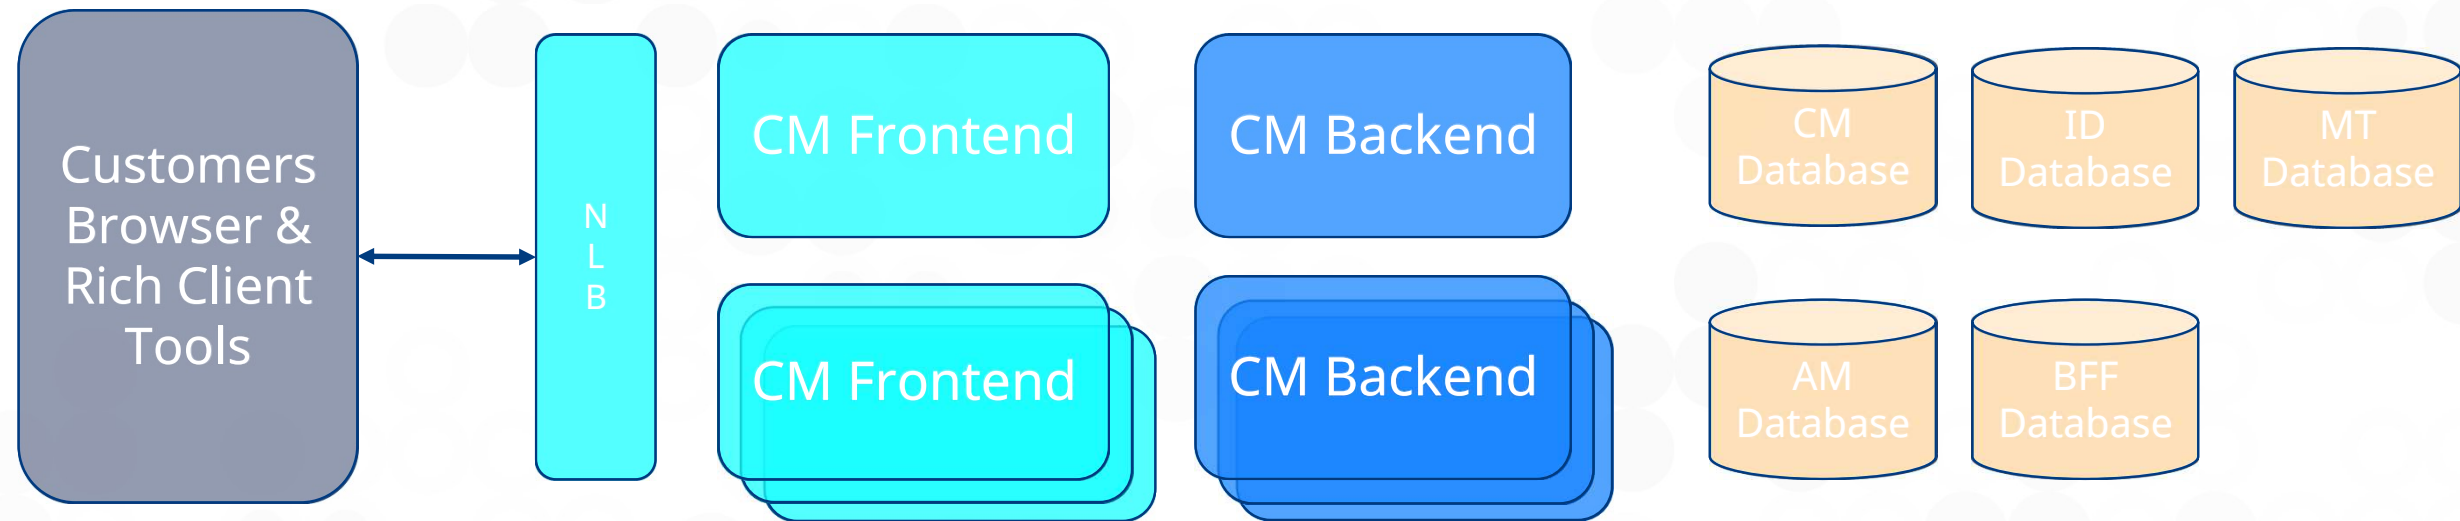

Web Apps – Deliver using .NET, ASP.NET (MVC) and React

Web Apps – Deliver using .NET, ASP.NET (MVC) and React

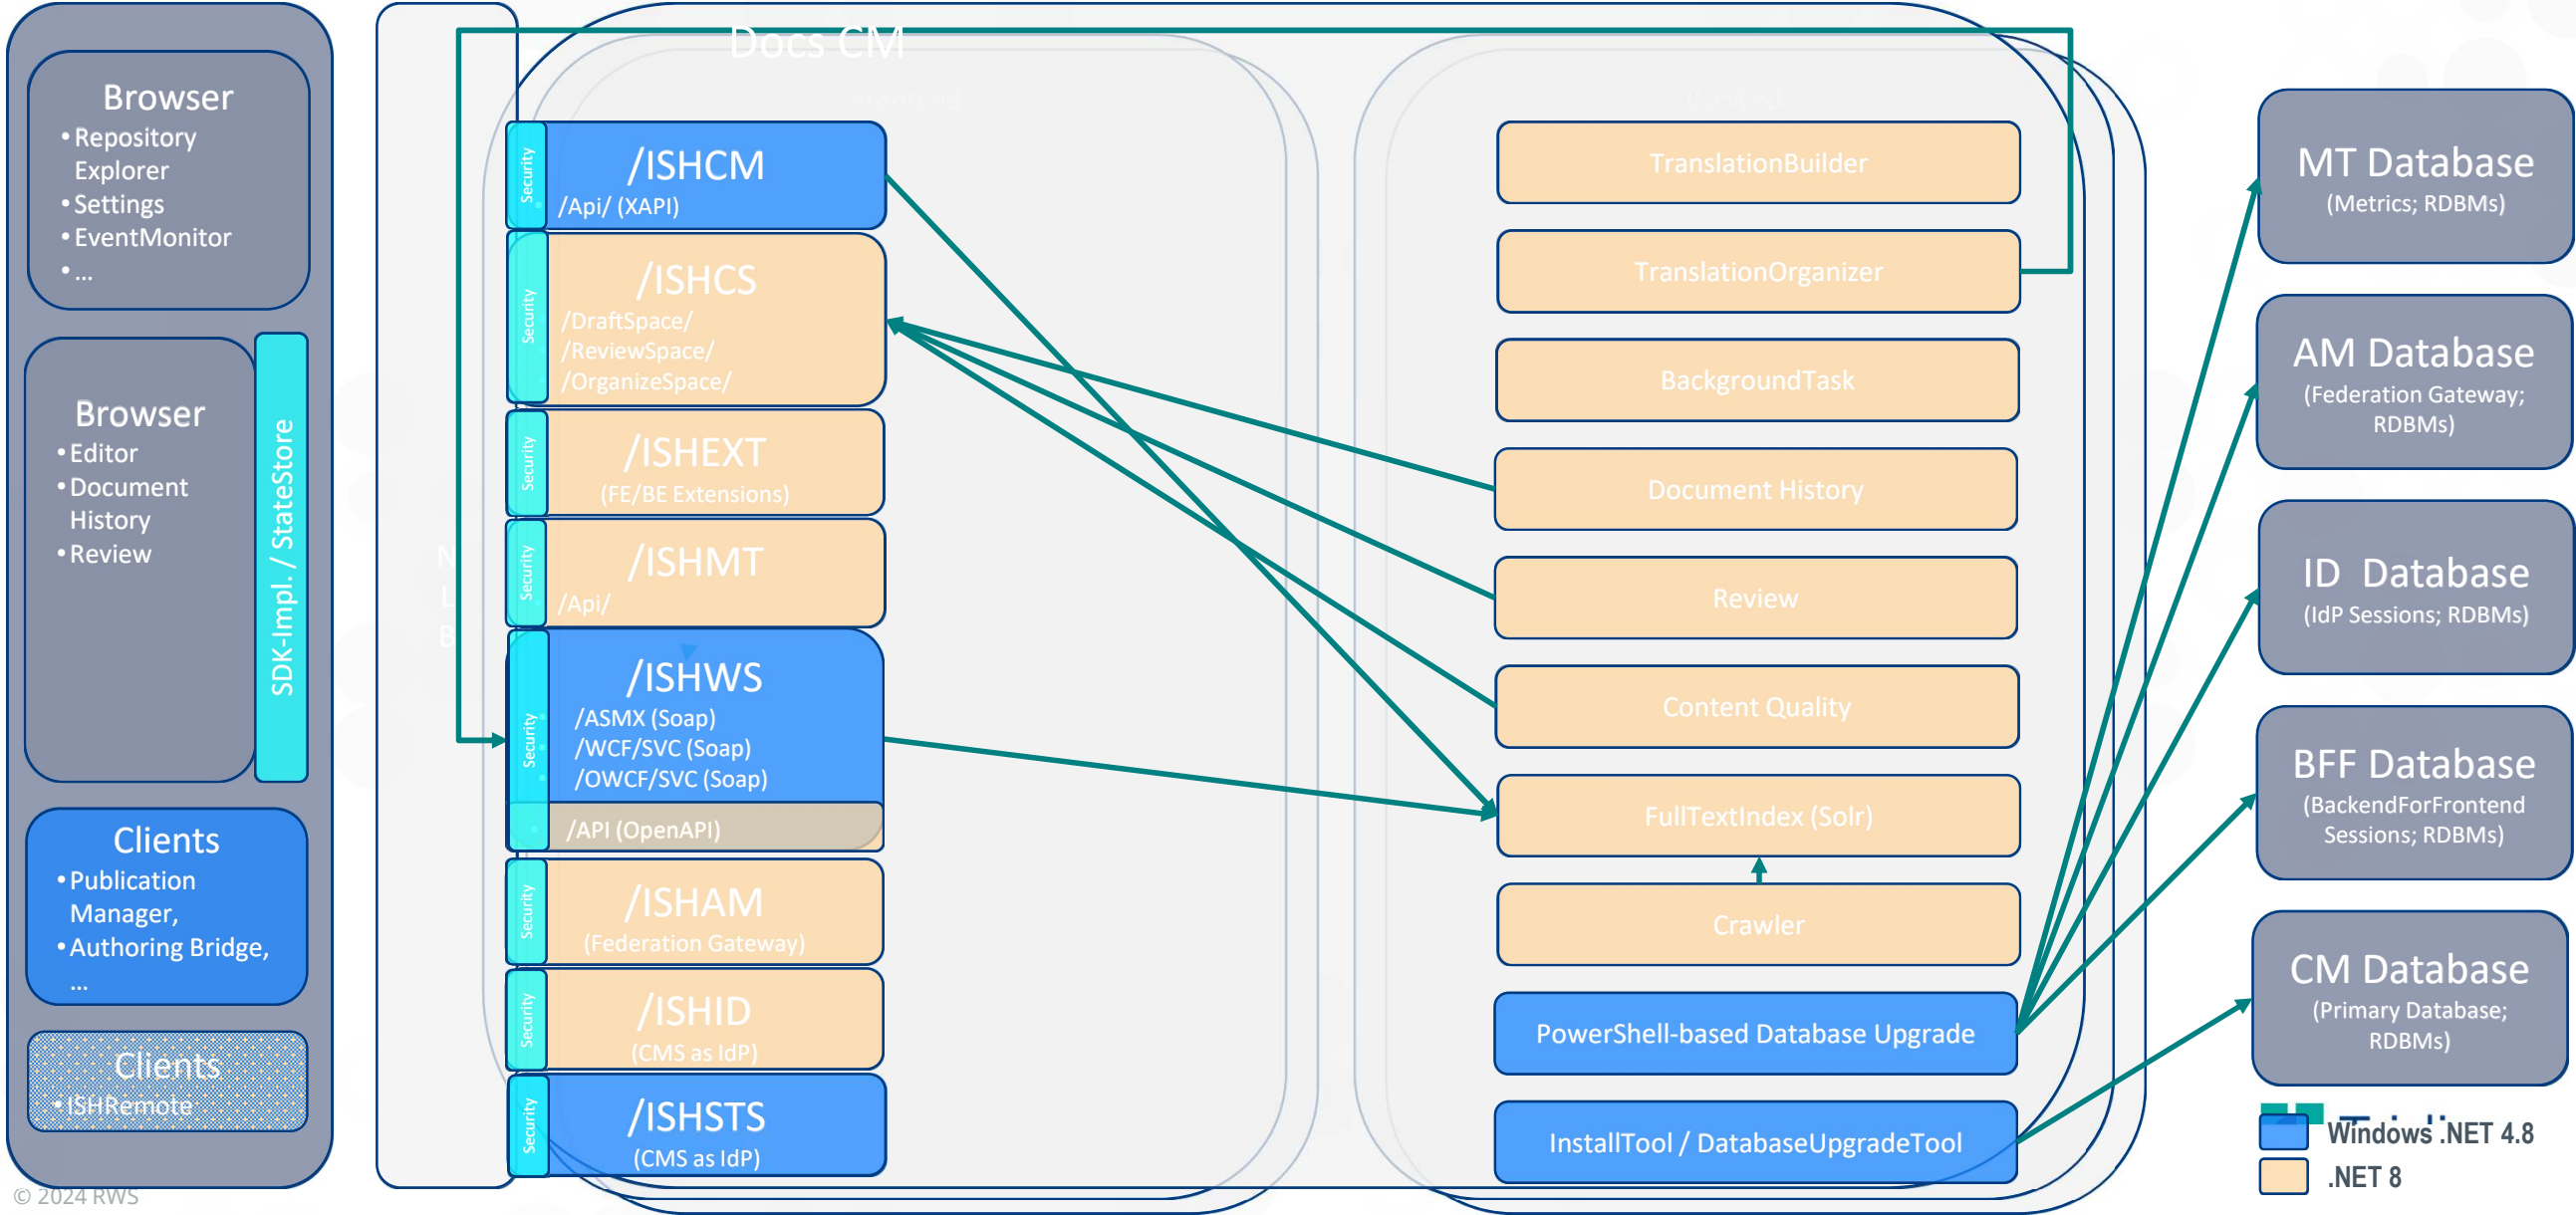

Tridion Docs - CMS - Architecture

- **High-availability** through stateless design allowing **autoscaling** on the web apps and on the heavy lifting batch services. Relying on relational DB technology.
- Transaction and lease concepts provide **auto-recovery** all the way

Platform Support – .NET 4.8 and .NET 8

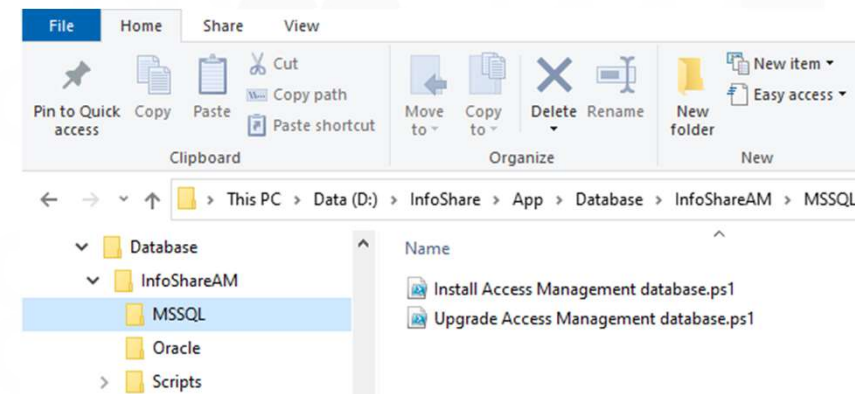

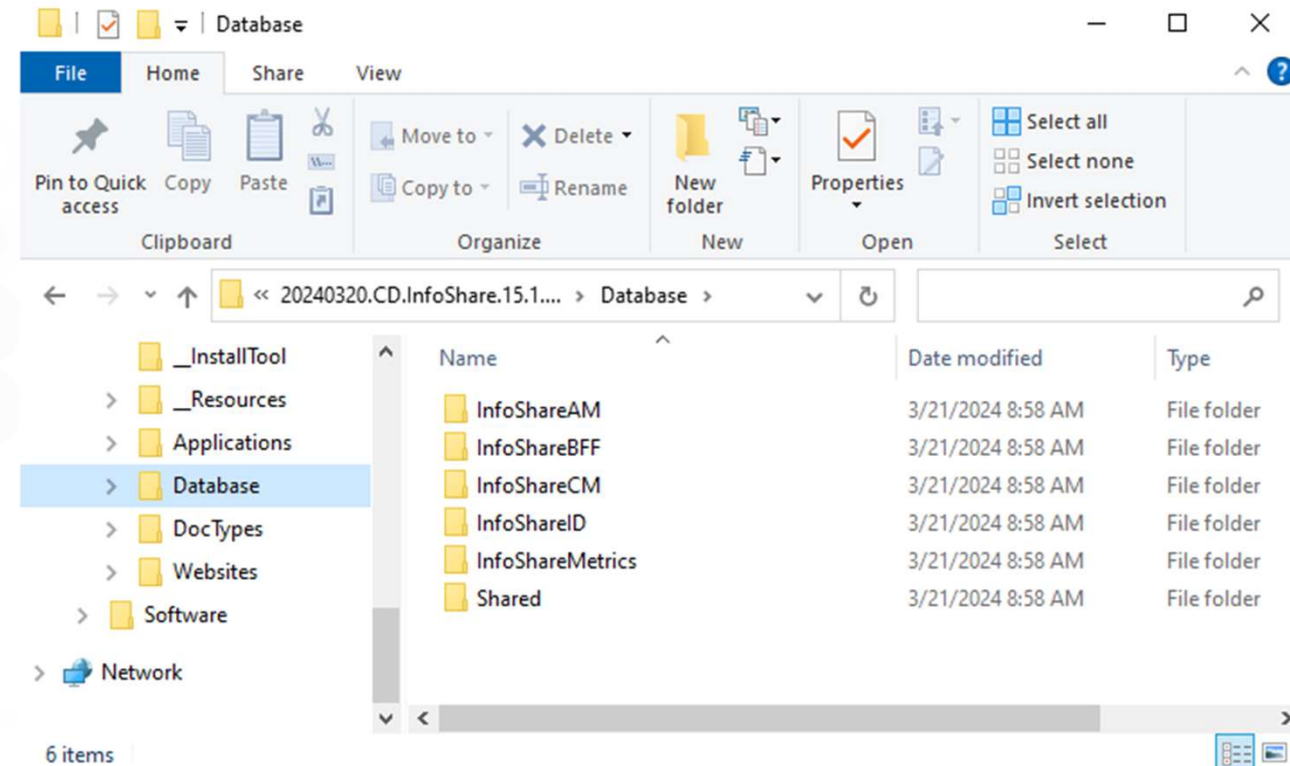

Installation / Upgrade

Tridion Docs 15.1 – Before Installation or Upgrade

- New installation
 - Restore CM database
 - Create databases with PowerShell scripts
 - Access Management (InfoShareAM, ISHAM)
 - Backend For Frontend Web Applications (InfoShareBFF, ISHBFF)
 - Tridion Docs Identity Provider (InfoShareID, ISHID)
 - Metrics (InfoShareMetrics, ISHMT)
- Upgrade from Tridion Docs 15.0
 - Upgrade CM database with DBUT
 - Upgrade Access Management with PowerShell scripts
 - Create Metrics database with PowerShell scripts
- Make sure .NET 8.0 (Hosting bundle) is installed
- Database upgrades are supported from 2016 SP4 / 12.0.4

Tridion Docs 15.1 – Databases

Database	ISHCM	ISHAM	ISHID	ISHBFF	ISHMT
Purpose	Holds all content & user data for Tridion docs Content Manager	Holds all data required for Access Management like Applications, Identity Providers, Api Resources and user claims	Holds InfoShare Identity Provider related information like signing keys, Server-side Session Management & Persisted Grants.	Holds user sessions details for BFF applications like Collective Spaces & Organize Space”	Holds all the data required for metrics reports
Maintenance jobs	StandardInfoShareJob	Maintenance/ data cleanup is done by the application code	Maintenance/ data cleanup is done by the application code	Maintenance/ data cleanup is done by the application code	Data aggregation
Using DBUT	Yes	No	No	No	No
Run Database Scripts separately	No	Yes	Yes	Yes	Yes
Idempotent upgrade scripts	Yes	Yes	Yes	Yes	Yes

Tridion Docs 15.1 – SQL server database users.

Database	ISHCM	ISHAM	ISHBFF	ISHID	ISHMT
Purpose	Holds all content & user data for Tridion docs Content Manager	Holds all data required for Access Management like Applications, Identity Providers, Api Resources and user claims	Holds user sessions details for BFF applications like Collective Spaces & Organize Space”	Holds InfoShare Identity Provider related information like signing keys, Server-side Session Management & Persisted Grants.	Holds all the data required for metrics reports
Deployment Database user	InfoShareCM (used to be ISOURCE)	InfoShareDeploy	InfoShareDeploy	InfoShareDeploy	InfoShareDeploy
Deployment time Database Roles	dbcreator server role, db_owner database role 'SQLAgentUserRole' 'SQLAgentReaderRole' 'SQLAgentOperatorRole'	dbcreator server role db_owner database role	dbcreator server role db_owner database role	dbcreator server role db_owner database role	dbcreator server role db_owner database role
Run time Database Username	InfoShareCM (used to be ISOURCE)	InfoShareAM	InfoShareBFF	InfoShareID	InfoShareMetrics
Run time Database Roles	[db_datareader] [db_datawriter]	[db_datareader] [db_datawriter]	[db_datareader] [db_datawriter]	[db_datareader] [db_datawriter]	[db_datareader] [db_datawriter]
Remarks	Used to be ' isource ' DBUT runs using same connection string for CM , so temporary requires more database roles during upgrade •Documentation shows how to reduce to minimal privileges	Run time user with minimum read/write privileges on the ISHAM database	Run time user with minimum read/write privileges on the ISHBFF database	Run time user with minimum read/write privileges on the ISHID database	Run time user with minimum read/write privileges on the ISHMetrics database

Tridion Docs 15.1 - Oracle database users.

Database	ISHCM	ISHAM	ISHBFF	ISHID	ISHMT
Purpose	Holds all content & user data for Tridion docs Content Manager	Holds all data required for Access Management like Applications, Identity Providers, Api Resources and user claims	Holds user sessions details for BFF applications like Collective Spaces & Organize Space"	Holds InfoShare Identity Provider related information like signing keys, Server-side Session Management & Persisted Grants.	Holds all the data required for metrics report
Deployment Database user	ISOURCE	InfoShareDeploy	InfoShareDeploy	InfoShareDeploy	InfoShareDeploy
Deployment time Database Roles	D:\InfoShare\App\Database\InfoShareCM\Common\Oracle\Create\isrcuser.i	D:\InfoShare\App\Databas e\InfoShareAM\Scripts\Oracle\Create\TridionSYSUser.sql	D:\InfoShare\App\Databas e\InfoShareBFF\Scripts\Oracle\Create\TridionSYSUser.sql	D:\InfoShare\App\Databas e\InfoShareID\Scripts\Oracle\Create\TridionSYSUser.sql	D:\InfoShare\App\Databas e\InfoShareMetrics\Scripts\Oracle\Create\TridionSYSUser.sql
Run time Database Username	ISOURCE	InfoShareAM	InfoShareBFF	InfoShareID	InfoShareMetrics
Run time Database Roles	C:\InfoShare\App\Database\InfoShareCM\Common\Oracle\Create\isrcuser.i	CONNECT Role	CONNECT Role	CONNECT Role	CONNECT Role
Remarks	DBUT runs using 'isource' as well	Run time user with minimum privileges on the ISHAM database	Run time user with minimum privileges on the ISHBFF database	Run time user with minimum privileges on the ISHID database	Run time user with minimum privileges on the ISHMetrics database

Required InstallTool parameters compared to 14SP4

Required Input parameter	14.0.4	15.0.0	15.1.0	Remark
osuser	X	X	X	The username for the designated operating system account.
ospassword	X	X	X	The password for the designated operating system account.
connectstring	X	X	X	The connection string for the instance of the content manager database.
apppath	X	X	X	The root directory for the Content Manager installation.
ps_java_home	X	X	X	The path to the JAVA HOME directory.
serviceusername	X	X	X	Specify the username for the Content Manager services, except for Translation Organizer in 15.0.0
servicepassword	X	X	X	Specify the password matching serviceusername's value, except for Translation Organizer in 15.0.0
ishamconnectstring		X	X	The connection string for the instance of the Access Management database.
ishbffconnectstring		X	X	The connection string for the instance of the backend for frontend manager database.
ishidconnectstring		X	X	The connection string for the instance of the Identity Provider database.
serviceaccountclientid		X	X	The service account client id for requesting access token from Access Management for Translation Organizer services
serviceaccountclientsecret		X	X	The service account client secret for requesting access token from Access Management for Translation Organizer service.
solrlucene_stop_port	X			The port used to stop the SolrLucene service.
ishmetricsconnectstring			X	The connection string for for the instance of the Metrics database
metricsserviceclientid			X	The metrics service client id for requesting access token from Access Management.
metricsserviceclientsecret			X	The metrics service client secret for requesting access token from Access Management.

Fields

New Fields

- Settings area
 - FISHPROJECTSTATECONFIG - Project status configuration
 - FISHAIASSISTANTCONFIG - AI Assistant configuration
 - FISHENABLEDRAFTCOMPANION - Indicate if Draft Companion is enabled or not
 - FISHDELETEOBJPLUGINCFG - Active delete plugin configuration
 - FISHGRIDRESOLUTION - Resolution used to show images in a folder grid view
 - FISHINTERNALTAXONOMYMBCONFIG - taxonomy concept schemes

New Fields - Tridion Docs Genius

- Tridion Docs Genius recommendations
 - FISHMBPRODUCT - publication
 - FISHMBPRODUCTRELEASE - publication
 - FISHMBGOAL – map, topic
 - FISHMBAUDIENCE – map, topic
- User Display Name changes
 - FISHCHECKEDOUTBY - Reference to the USER who checked out this object to enable User Display Name feature

New Fields - Publication Hub

- FDESCRIPTION - Used on various logical card types to store the description why this object exists.
- FISHPUBLICATIONS - Used on projects to indicate the publication versions which are part of this project.
- FISHPROJECTCREATOR - Used on projects to indicate the user that created the project.
- FISHASSIGNEES - Used on projects to indicate which users are assigned to sign off this project.
- FISHPROJECTSTATUS - Used on projects to indicate the status of the project.
- FISHAPPROVEDASSIGNEESCOUNTER - Used on projects to indicate how many assignees already approved this project
- FISHTOTALASSIGNEESCOUNTER - Used on projects to indicate how many assignees there are for this project
- FISHASSIGNEE - Used on project assignees to indicate the user that is linked with this assignment.
- FISHSIGNOFFDATE - Used on project assignees to store when the user approved
- FISHSIGNOFFSTATUS - Used on project assignees to indicate the status for this assignee
- FISHSIGNOFFMESSAGE - Used on project assignees to supply some a message from the assignee
- FISHMODIFIEDBY - Modified by user
- FISHREVIEWDUEDATE - Used on projects to indicate when the review of the project should be finished
- FISHDUEDATE - Used on projects to indicate when the project should be finished

Deprecated and Removed Fields

- Deprecated Fields (also removed from Plugin configurations)
 - FMBPRODUCTFAMILYNAME
 - FMBPRODUCTRELEASENAME
 - FMBCONTENTREFTYPE
- Removed
 - FISHENABLEDOUTOFDATE
 - FISHENRICHURL
 - FISHLCURI
 - CHECKED-OUT-BY, replaced by FISHCHECKEDOUTBY

Tridion Doc Identity Provider	ISHID	en-us, de-de, ja-jp, zh-hans, es-es, fr-fr, it-it New: fr-ca

Database Cleanup and Improvements

Motivation for Database Cleanup

- Two data layers (COM+ and .NET)
 - Limiting the improvements for the Database
 - COM+ dropped since 15.0.0
- Revisit the indexes
 - .NET code makes different queries than COM+
 - No performance degradation in result

MS SQL Server Database

SQL Server – Database Improvements

- Replaced `ISHCore_ListToStringTableNVC255` & `ISHCore_ListToNumberTableD10` with `STRING_SPLIT` SQL server native function
- In accordance with the removal of COM+, investigations have been done on the Content Manager database and changes applied to update indexes to include or exclude selecting and filtering columns
- The `ISH_CreateIndexes` is adapted for the database improvement
 - There for `DBUT_CreateIndex` stored procedure is extended with new parameter: `IncludeColumn` for the purpose
- The `ISH_Crawler` is updated to add new index (`ISH_TOINDEX_1_I2`)

Oracle Database

Oracle - Cleanup and improve indexes

table	index name	action	unique?	columns
DATE_VALUES	DATE_VALUES_U2	drop		
NUMBER_VALUES	NUMBER_VALUES_U2	drop		
ISH_EVENTPROGRESS	ISH_EVENTPROGRESS_I3	add	no	MODIFICATIONDATE, STATUS
ISH_VERSIONOBJECT	ISH_VERSIONOBJECT_I5	add	no	ISHTYPE, VERSIONNUMBER
ISH_VERSIONOBJECT	ISH_VERSIONOBJECT_I3	drop		
ISH_TOINDEX_1	ISH_TOINDEX_1_I2	add	no	LNG_CARD_ID, LNG

Oracle – Reduced privileges

- Following the least privileges principle
 - ISOURCE user rights are limited to CM schema only and not ANY schema.

Removed rights :

```
GRANT CREATE ANY INDEX TO ISOURCE
GRANT ALTER ANY INDEX TO ISOURCE
GRANT DROP ANY INDEX TO ISOURCE
GRANT DROP ANY SEQUENCE TO ISOURCE
GRANT SELECT ANY SEQUENCE TO ISOURCE
GRANT FORCE TRANSACTION TO ISOURCE
GRANT EXECUTE ANY TYPE TO ISOURCE
```

```
GRANT ALTER ANY TABLE TO ISOURCE
GRANT DROP ANY TABLE TO ISOURCE
GRANT SELECT ANY TABLE TO ISOURCE
GRANT INSERT ANY TABLE TO ISOURCE
GRANT UPDATE ANY TABLE TO ISOURCE
GRANT DELETE ANY TABLE TO ISOURCE
GRANT ALTER ANY TYPE TO ISOURCE
```

Convert Date Time to UTC

Why..?

- Standardization and Consistency
 - Always show the correct local time to end user regardless of the server location.
- Simplify server migration between different time zone.
- UTC timestamps simplifies identifying and correlating events and logs across different systems and time zones.

All log files (server and client) all date time is in UTC

Components adjusted to use and log in UTC

- Access management
- Install Tool
- Database Upgrade Tool
- Translation Organizer
- Translation Builder
- OpenAPI

Components that are still using local time

- SOAP API for backward compatibility
- Out of the box plugins and background tasks
 - Using SOAP API underneath

Database Upgrade Tool

- DBUT has work to do during an upgrade due to DateTime conversion
 - ConvertDateValues
 - ConvertRevisionHistoryAndDateValues
 - ConvertBaselineDateTimes
 - ConvertEventDetailDateTimes
 - ConvertEventProgressDateTimes
- New column 'DATETIMEKIND' was added to the following tables
 - DATE_VALUES
 - ISH_EVENTPROGRESS
 - ISH_EVENTPROGRESSDETAILS
 - ISH_BASELINE
- Possible values 'LOCAL' & 'UTC' default is 'LOCAL' to highlight conversion input. UTC is the expected value after conversion.

Trisoft.Setup.DBUpgradeTool.Migration150100.dll Configuration

```
<?xml version="1.0" encoding="utf-8" ?>
<Configuration>
  <ConvertDateValues>
    <MaxDegreeOfParallelism>4</MaxDegreeOfParallelism>
  </ConvertDateValues>
  <ConvertRevisionHistoryAndDateValues>
    <ProcessingBatchSize>300</ProcessingBatchSize>
  </ConvertRevisionHistoryAndDateValues>
</Configuration>
```

- ConvertRevisionHistoryAndDateValues.ProcessingBatchSize
 - Default value is 300
 - Max value is 1000
- For other UTC date conversion jobs, we use 1000 as batch size.

Privileges

New Privileges

- **VPRIVILEGEPROJECTMANAGEMENT**
 - Project management privilege determines whether a user is allowed to manage Publication Hub projects
- **VPRIVILEGEMETRICSMANAGEMENT**
 - Metrics management privilege determines whether a user is allowed to view and manage metrics
- **VPRIVILEGETAXONOMYMANAGEMENT**
 - Taxonomy management privilege determines whether a user is allowed to view and manage taxonomies

Privilege ID	Name	Description
VPRIVILEGESYSTEMADMINISTRATOR	System Administrator Privilege	Access to all components and can overrule most business limitations
VPRIVILEGETRANSLATIONMANAGEMENT	Translation Management Privilege	Manage translation jobs
VPRIVILEGEWORKFLOWSETTINGS	Workflow Settings Privilege	Adapt the workflow configuration file
VPRIVILEGEPLUGINSETTINGS	Plugin Settings Privilege	Adapt the plugin configuration file
VPRIVILEGEUSERMANAGEMENT	User Management Privilege	Manage users, user groups and user roles.
VPRIVILEGELISTOFVALUESMANAGEMENT	List Of Values Management Privilege	Manage list of values.
VPRIVILEGEOUTPUTFORMATSMANAGEMENT	Output Formats Management Privilege	Manage output formats.
VPRIVILEGEINBOXSETTINGS	Inbox Settings Privilege	Adapt the inbox configuration file
VPRIVILEGETRANSLATIONSETTINGS	Translation Settings Privilege	Adapt the translation configuration file
VPRIVILEGEEVENTMONITOR	Event Monitor Privilege	Access to Event log tab Note – Currently no extra business rules only UI impact
VPRIVILEGEMOVEOBJECT	Move Object Privilege	Move Objects privilege determines whether a user is allowed to move object to folders with different security settings.
VPRIVILEGEUNDOCHECKOUTCONTENT	Undo Checkout Content Privilege	Undo Checkout Content privilege determines whether a user is allowed to undo checkout the document object content.
VPRIVILEGEUNRELEASEPUBLICATIONOUTPUT	Unreleasing Publication Output	Publication Output Status transition from "Released" to "Draft"
VPRIVILEGEPROJECTMANAGEMENT (NEW)	Project Management Privilege	Determines whether a user is allowed to manage projects
VPRIVILEGEMETRICSMANAGEMENT (NEW)	Metrics Management Privilege	Determines whether a user is allowed to manage metrics
VPRIVILEGETAXONOMYMANAGEMENT (NEW)	Taxonomy Management Privilege	Determines whether a user is allowed to manage taxonomies

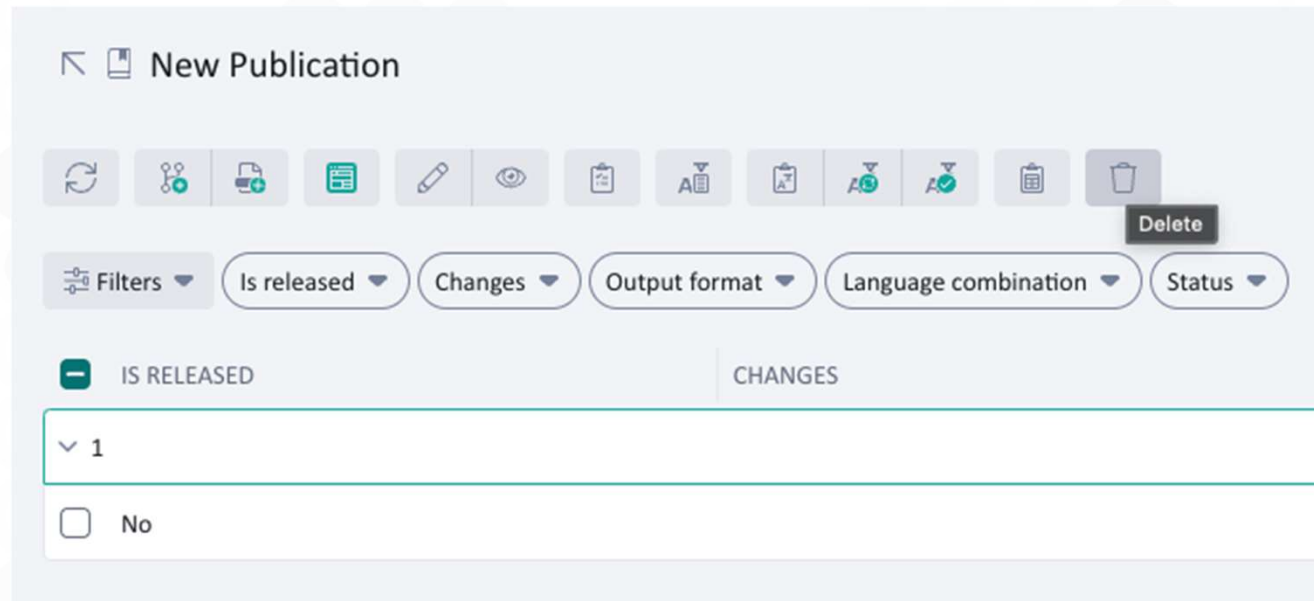

New Delete Publication Version business rule

New Delete Publication Version business rule

When the last version of a publication is deleted, the publication itself is also deleted

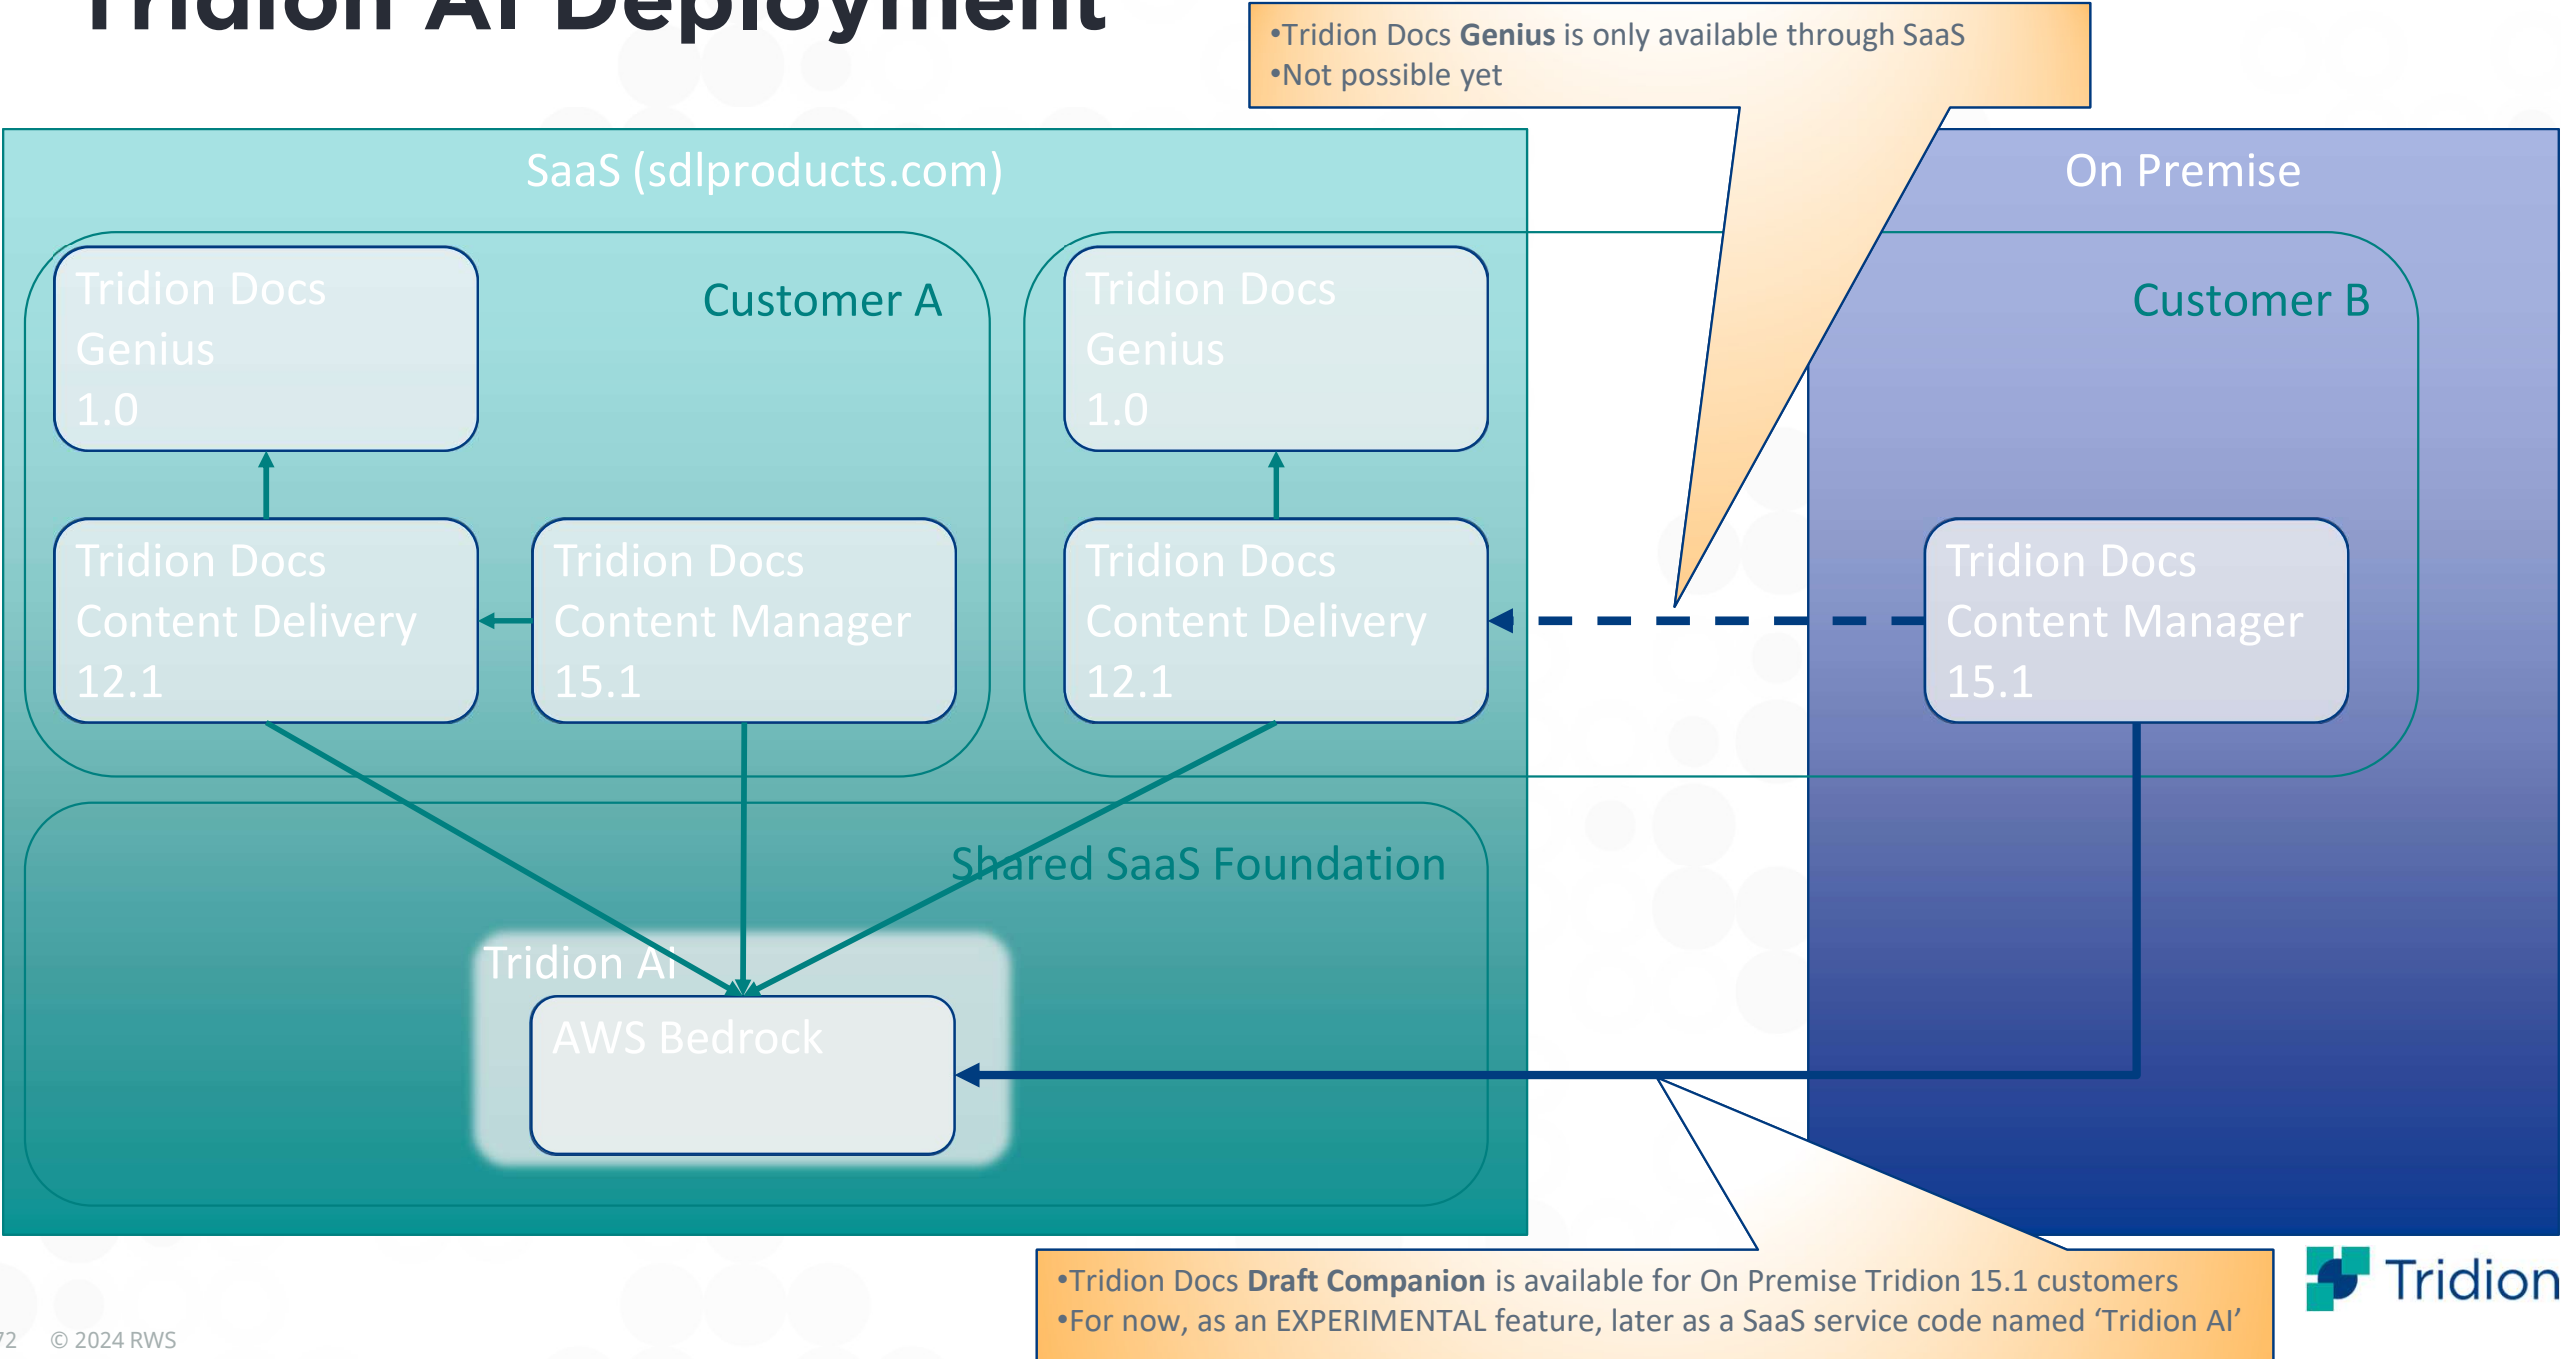

The screenshot shows a software interface titled "New Publication". It features a toolbar with various icons, including a trash can icon labeled "Delete". Below the toolbar, there are several filter buttons: "Filters", "Is released", "Changes", "Output format", "Language combination", and "Status". A table is displayed with two columns: "IS RELEASED" and "CHANGES". The table has a single row with a dropdown menu showing "1" and a checkbox labeled "No".

Draft Companion – Content Wrapper and System String

- **Content Wrapper**
(contentWrapperRefId) is used to wrap the request content (if needed).
Wildcard: **{{content}}**
- **System Prompt**
(systemPromptRefId) for Claude Instant (contrary to some other LLMs) is not a separate parameter or actor but a part of a prompt itself.
Wildcard: **{{question}}**
- **Complete request:**
`<full_content>`: `<content_wrapper>` with a `{{content}}` substituted
or `<wrapper>\n<content>`
`<question>`: `<full_content>\n\n<prompt>`
`<prompt>`: system string with `{{question}}` substituted
or `<question>\n<system_string>`

The screenshot shows the Tridion Docs interface with the 'XML Settings' tab selected. The 'AI Assistant' sub-tab is active, displaying an XML configuration for an AI assistant. The XML structure includes a root element 'infoShareAIAssistant' with a version attribute. It contains a 'providers' section with a 'defaultProvider' element. This provider has a 'connection' element and a 'models' section. The 'models' section lists several models, each with a 'model id', 'contentWrapperRefId', and 'systemPromptRefId'. The models are: 'improveReadabilityModel', 'fixGrammarConsistentModel', 'rephraseBasicModel', and 'userPromptHighlyVariativeModel'. Each model has a 'properties' section with attributes like 'temperature', 'topP', 'topK', and 'maxTokensToSample'. Below the models, there is a 'prompts' section with several prompt elements, each with an 'id' and a text value. The prompts include 'textContentWrapper', 'straightToThePointSystemPrompt', 'readabilitySystemPrompt', 'improveReadabilityPrompt', 'grammarAndPunctuationSystemPrompt', 'checkGrammarPrompt', 'rephraseSystemPrompt', 'summarizeTextPrompt', and 'retryLastActionPrompt'. Finally, there is an 'actions' section with an 'improveReadabilityAction' element, which has a 'calculateReadabilityScore' attribute and a 'prompt refId' attribute.

AI Assistant – Draft Companion Localization

Localizable elements are having 'resourceRef' attribute that holds resource keys and hardcoded fallback values

It works same as the metadataconfig.xml file localization method:

- resourceRef attributes are looked in DialogString.xml files. If not provided, a fallback is supported
- DialogString files, are xml files on the file system *InfoShare\Web\Author\ASP\Resources*. So, if an admin wants to add new values, or adapt the existing ones, they need to connect to file system of the installation and make the changes in corresponding DialogString file for given language

```

Tridion AI Genius

Tridion AI – Genius Metadata Fields (New)

- **FISHMBPRODUCT** - Product for publication on logical
- **FISHMBPRODUCTRELEASE** – Product release for publication on version level
- **FISHMBGOAL** – Goal for maps and topics on logical level
- **FISHMBAUDIENCE** – Audience for maps and topics on logical level
- Fields are multi string values

Tridion AI - Taxonomies

- Managing simple taxonomies in Tridion Docs which requires the **VPRIVILEGETAXONOMYMANAGEMENT** privilege
- No support for localization
- Only supports simple taxonomies, if more enhanced requirements are needed in the future customers can switch to our Semantic AI offering
- Taxonomy concept schemes are stored in the **FISHTAXONOMYCONFIG** field

Tridion AI – Taxonomies

```
<conceptScheme id="PRODUCT">
  <concept id="TRIDION" isSelectable="false" isActive="true">
    <title>Tridion</title>
    <description>All Tridion products</description>
    <concept id="TRIDIONDOCS" isSelectable="true" isActive="true">
      <title>Tridion Docs (100)</title>
      <description>Tridion Docs, the best CCMS</description>
    </concept>
    <concept id="TRIDIONSITES" isSelectable="true" isActive="true">
      <title>Tridion Sites (50)</title>
      <description>Tridion Sites, the best CMS</description>
    </concept>
  </concept>
</conceptScheme>
```

- Concepts can be nested
- User can only select concepts in the UI when **isSelectable** is true (default)
- User can only see concepts in the UI when **isActive** is set the true (default)
- Title and descriptions are not localizable.
- Concept identifiers must be unique is a concept scheme
- Can be used for metadata binding
- Managing taxonomies requires the **VPRIVILEGETAXONOMYMANAGEMENT** privilege

Tridion AI – Content Delivery searching on fields

In Tridion Docs Genius it is easier to find and navigate to the content the Customer is looking, therefore it needs to index fields.

Which fields needs to be indexed can now be specified in the **DitaDeliveryPrepareMetadata** handler which is one of the 'Publish Plug-ins'.

```
<plugindefinition name="ISHDITADELIVERYPREPAREMETADATA" handler="DitaDeliveryPrepareMetadata">
  <description>
    Collects all files in the DITA-OT "out" folder and tries to find a matching...
  </description>
  <initialize>
    <parameters>
      <parameter name="DITAOTOutDirectoryContextItemKey">DITAOTOutDirectory</parameter>
      <parameter name="PublicationMetadataSchemaFileName">publication_metadata_schema.json</parameter>
      <parameter name="PageMetadataSchemaFileName">page_metadata_schema.json</parameter>
      <parameter name="BinaryMetadataSchemaFileName">binary_metadata_schema.json</parameter>
      <parameter name="SearchableFields">
        <ishfields>
          <ishfield name="FISHMBGOAL" level="logical" />
          <ishfield name="FISHMBAUDIENCE" level="logical" />
          <ishfield name="FISHMBPRODUCT" level="logical" />
          <ishfield name="FISHMBPRODUCTRELEASE" level="version" />
        </ishfields>
      </parameter>
    </parameters>
  </initialize>
</plugindefinition>
```

Make sure the fields are exported during publishing for DocumentObjRequestedMetadata and PublicationOutputRequestedMetadata (configured in Publish Plug-ins XML Settings)

Tridion AI – Content Delivery searching on fields schema

Tridion AI – Migration List Of Values To Taxonomy

Location:

`\InfoShare\App\Database\InfoShareCM\Common\DatabaseIndependent\Examples\CreateInternalTaxonomySyncWithLvs\MigrateToIshTaxonomies.ps1`

Examples

```
.\MigrateToIshTaxonomies.ps1 -WsBaseUrl "https://ish.example.com/ISHWS/" -OutputDir "C:\Temp" -Mappings @{  
    "GOAL"           = ""  
    "AUDIENCE"       = ""  
    "PRODUCTFAMILY" = "DPRODUCTFAMILYNAME"  
    "PRODUCTRELEASE" = "DPRODUCTRELEASENAME"  
}
```

```
$ishSession = New-IshSession -WsBaseUrl https://example.com/ISHWS/  
.\MigrateToIshTaxonomies.ps1 -IshSession $ishSession -OutputDir "C:\Temp" -Mappings @{  
    "GOAL"           = ""  
    "AUDIENCE"       = ""  
    "PRODUCTFAMILY" = "DPRODUCTFAMILYNAME"  
    "PRODUCTRELEASE" = "DPRODUCTRELEASENAME"  
}
```

Outcome: **infoShareTaxonomies.xml** file with concepts

Tridion AI - Organization Metadata Overview

Field Name	Data Source	Used by	Remarks	Migration
FISHPRODUCTFAMILYNAME	LOV: DPRODUCTFAMILYNAME	DXA/DDWebApp to drive landing tiles order	Deprecated , fields are no longer in UI but remain in database as conversion input	Potential source for seeding FISHMBPRODUCT and FISHPRODUCTRELEASENAME <ul style="list-style-type: none"> MigrateToIshTaxonomies.ps1 that generates the Xml Settings Sample ISHRemote script to migrate fields
FISHPRODUCTRELEASENAME	LOV: DPRODUCTRELEASENAME	DXA/DDWebApp to drive release name dropdowns order		
FMBPRODUCTFAMILYNAME	MetadataBinding: SitesTaxonomyFamilyName	Content Mashup to single source across Tridion Docs and Tridion Sites using Keywords structure	Obsolete , field is no longer in UI. SitesTaxonomy connector is obsolete and can be replaced by Semantic AI which Tridion Docs and Sites can flawlessly integrate to PoolParty	<i>Potential source although in practice never used.</i>
FMBPRODUCTRELEASENAME	MetadataBinding: SitesTaxonomyReleaseName			
FMBCONTENTREFTYPE	MetadataBinding: SitesTaxonomyContentReferenceType			
FISHMBPRODUCT	MetadataBinding: InternalTaxonomyConcepts	Genius portal to drive landing tiles order and AI-driven recommendations	New fields. Tagging objects benefits Genius organizations , AI-features and potentially slicing in Metrics	
FISHMBPRODUCTRELEASE	MetadataBinding: InternalTaxonomyConcepts	Genius portal to drive release name dropdowns order and AI-driven recommendations		
FISHMBGOAL	MetadataBinding: InternalTaxonomyConcepts	Genius portal AI-driven recommendations		
FISHMBAUDIENCE	MetadataBinding: InternalTaxonomyConcepts	Genius portal AI-driven recommendations

Metrics

Customer benefits

Return on investment (**ROI**)

As a Head of Department or Tridion Docs suite owner, I would like to see ROI of using Tridion Docs product so I can protect/justify usage of a system with an upper management/budgeting team.

Content **re-use** level

As a Head of Department or Tridion Docs suite owner, I would like to see content re-use status system-wide, per department, so I can decide where to improve to increase ROI.

Productivity

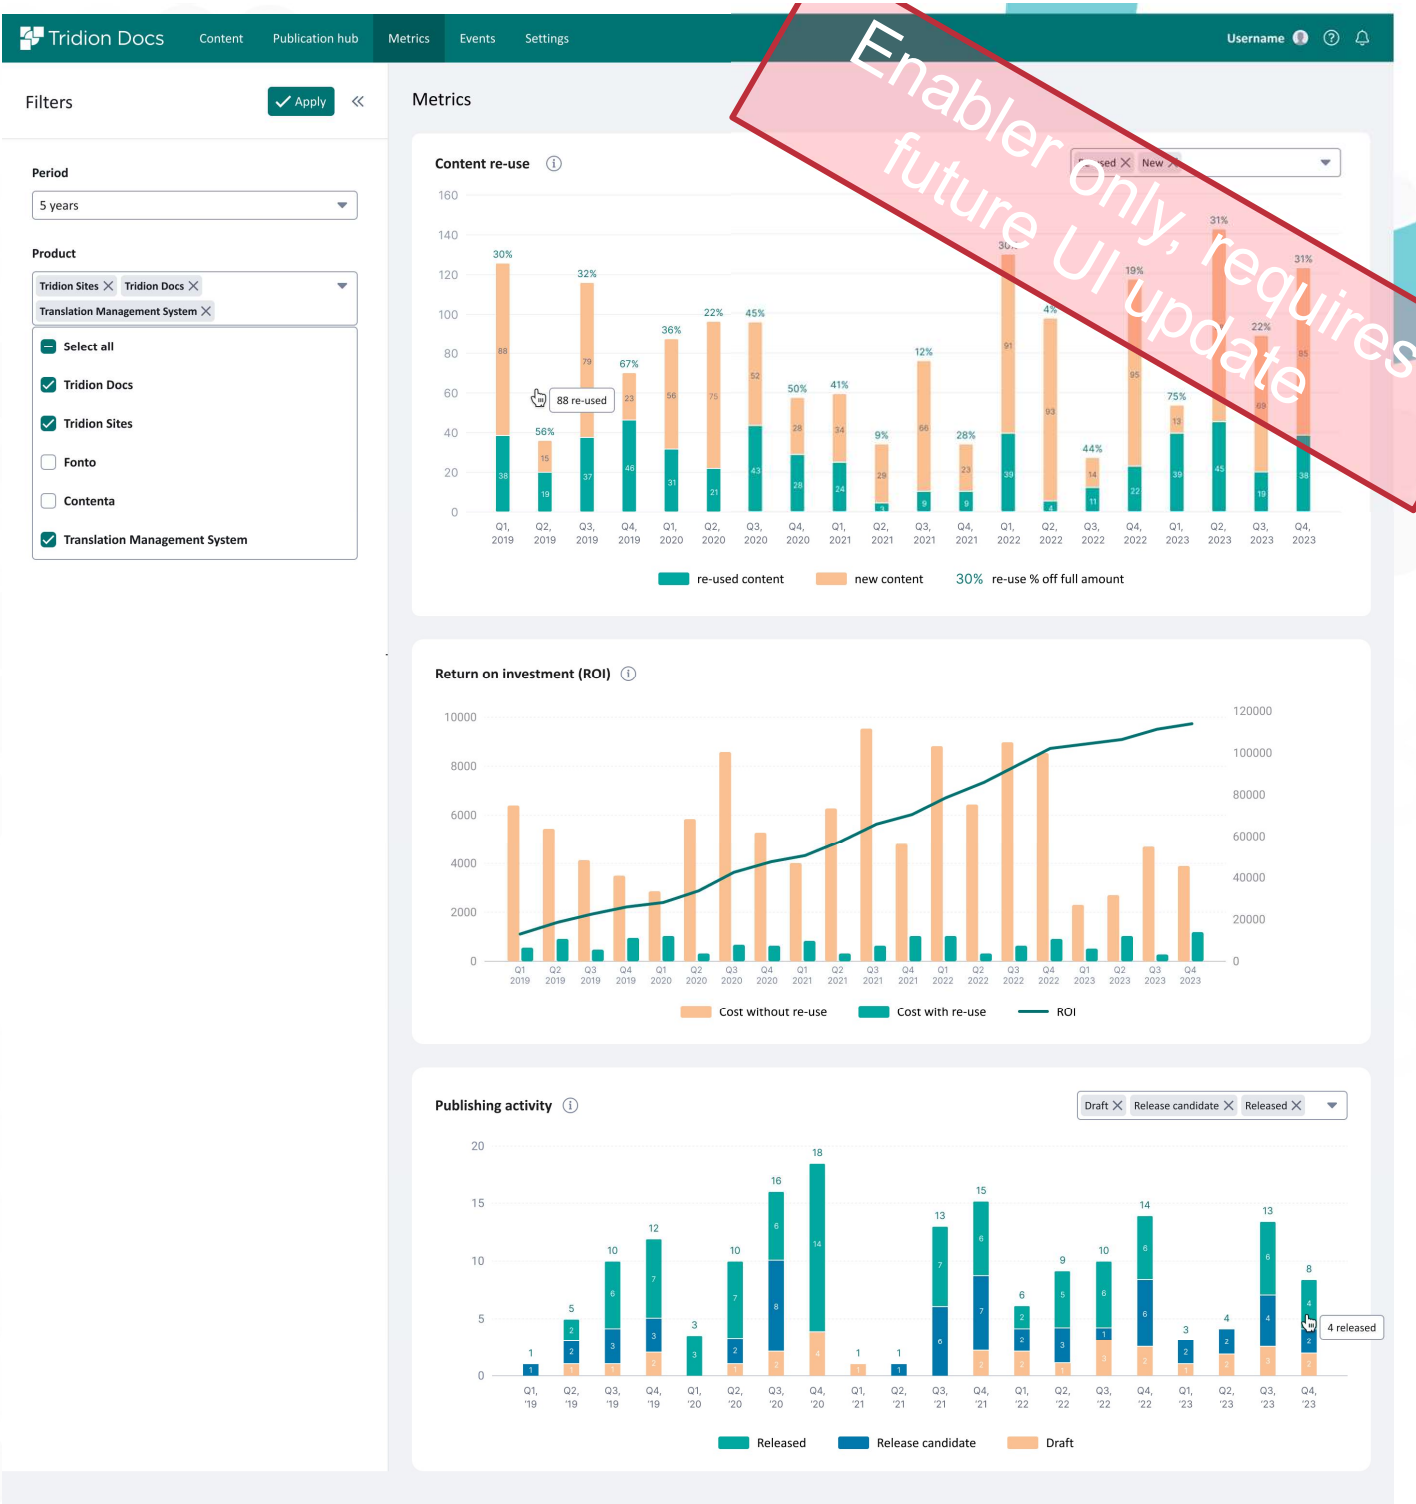

As a Head of Department or Tridion Docs suite owner, I would like to see productivity (system-wide, department) to decide on timelines, resourcing, etc

UX and filtering

Metrics

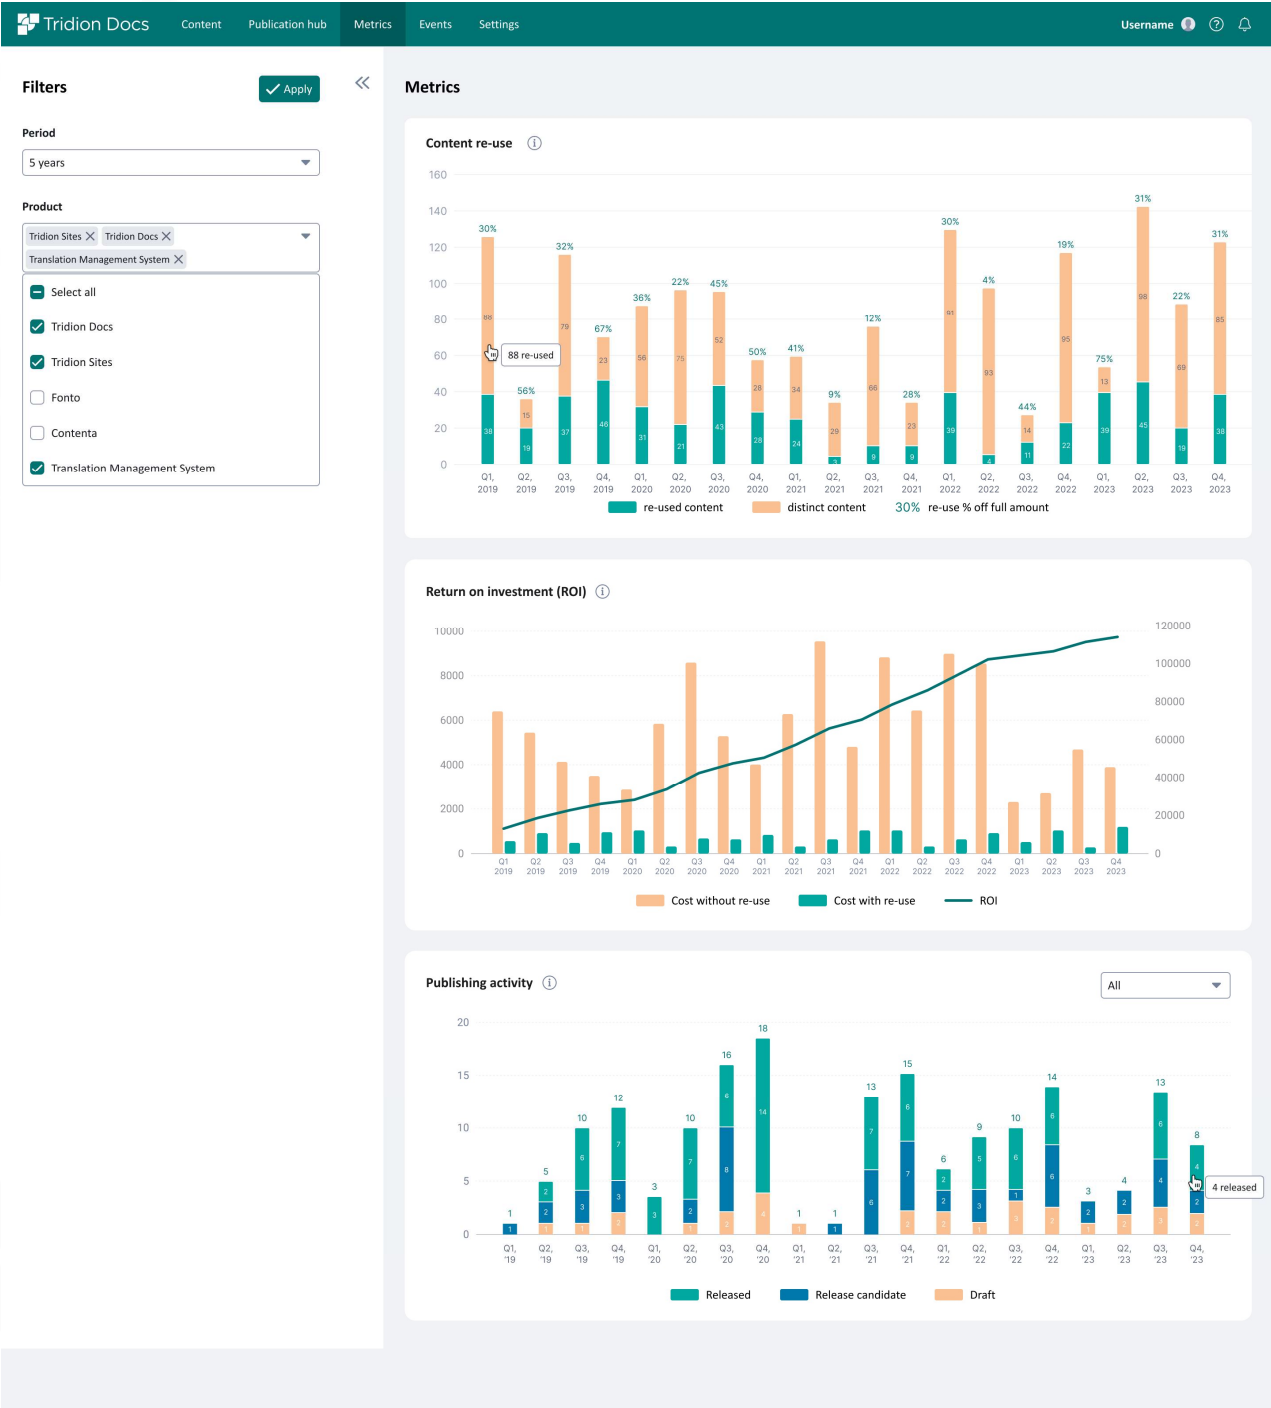

- Content reuse chart will show you reuse level for selected period highlighting amount of new content comparing to the one that was reused and reuse level
- ROI shows value of using Tridion Docs for selected period based on customer's reuse level versus creating content from the scratch
- ROI has cumulative trend over time
- Productivity chart shows publishing activity for selected period indicating status of published outputs
- Deep dive details on community blogs

How to see zoom in data?

Use FISHMBPRODUCT metadata field on a Publication logical level – Product family name for publication

- Multi value string field
- Taxonomy concepts can be used
- Not a mandatory field

Release

Release

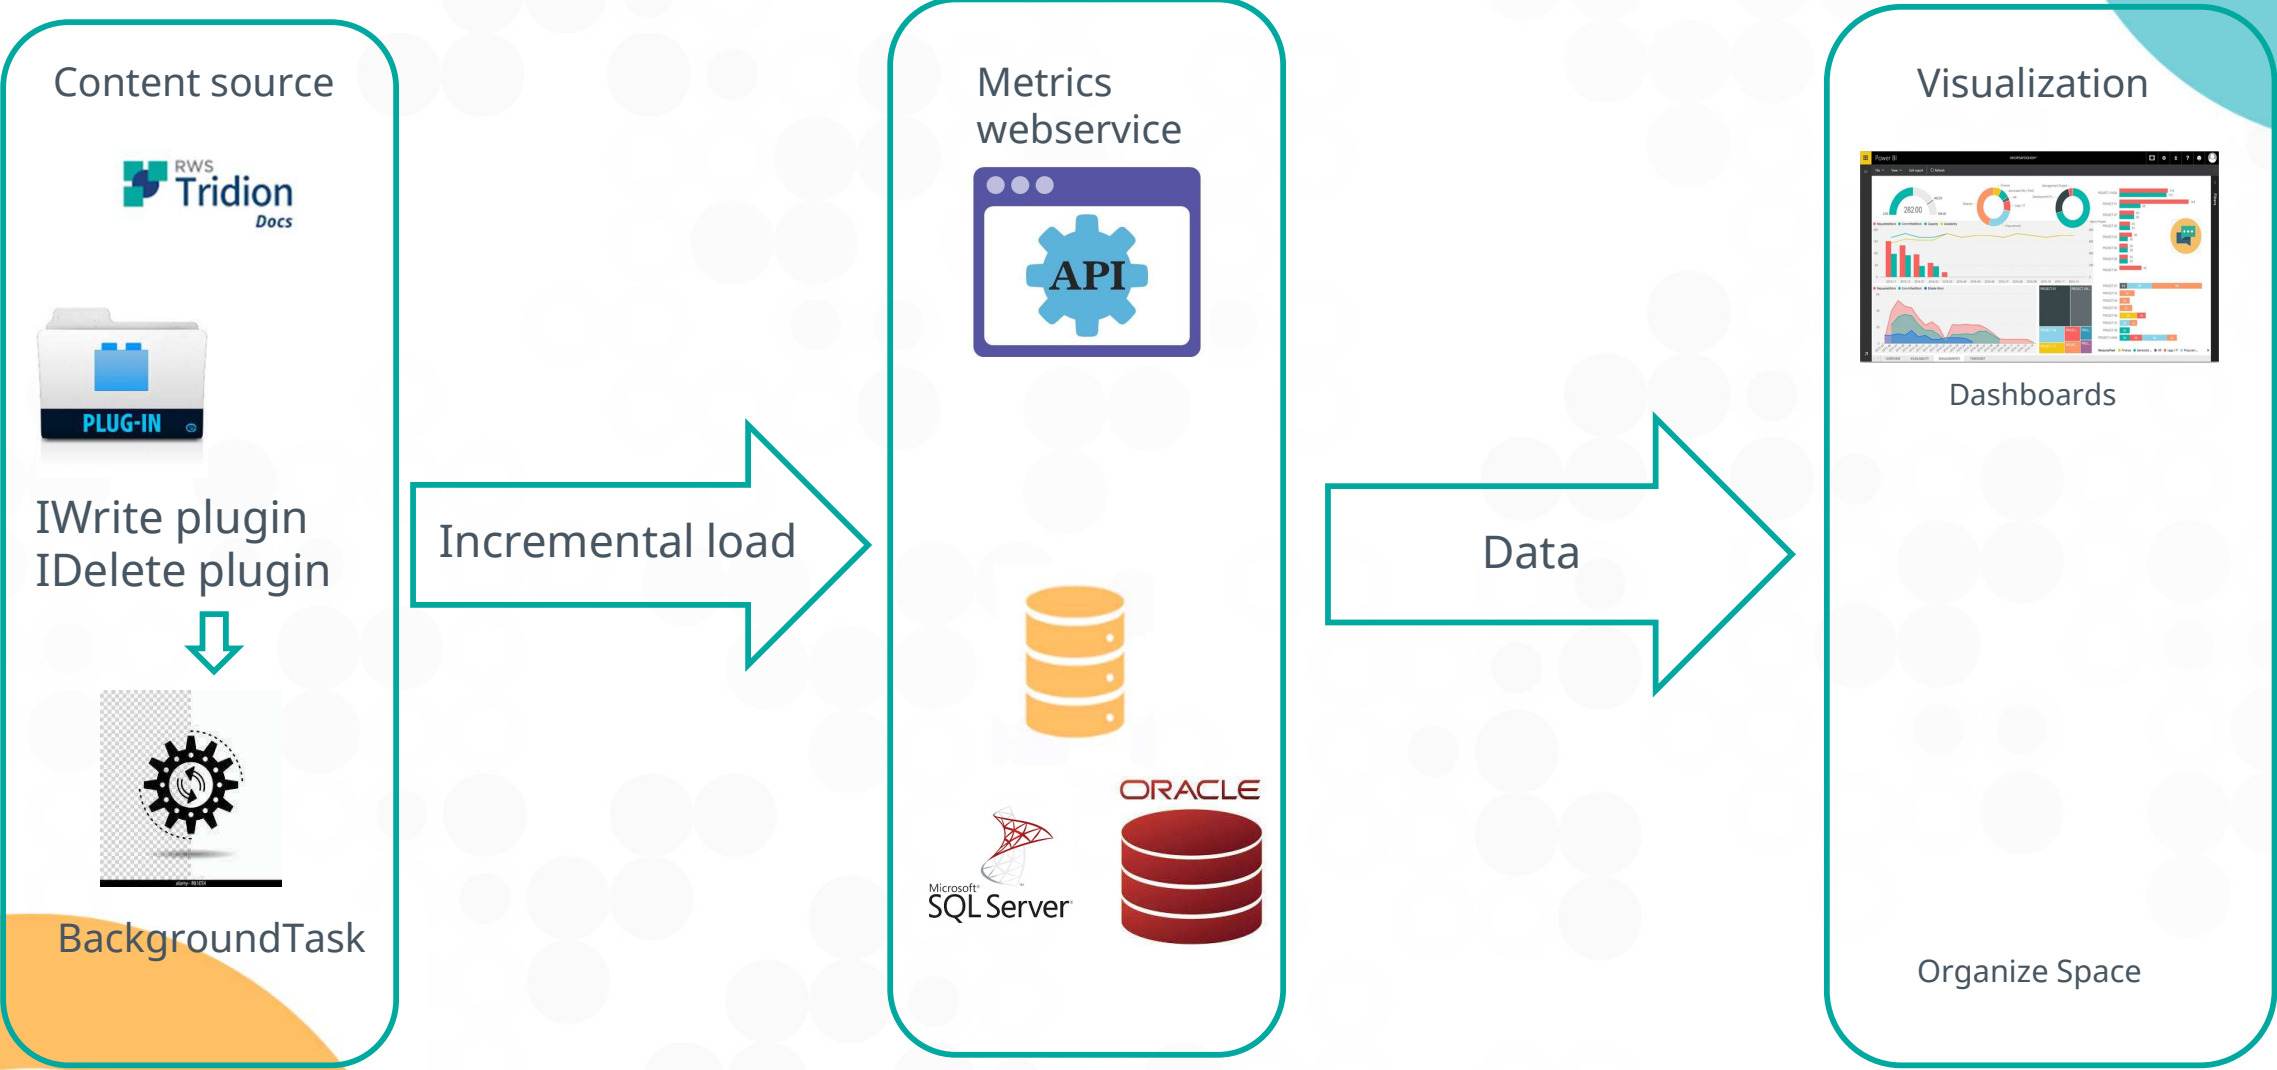

Tridion Docs 15.1 - enablers (IWrite and IDelete plugins, basic DB Schema for new Metrics Db, deployment for new webservice)

Later – mandatory Hotfix on top of Tridion Docs 15.1 to have end to end Metrics feature

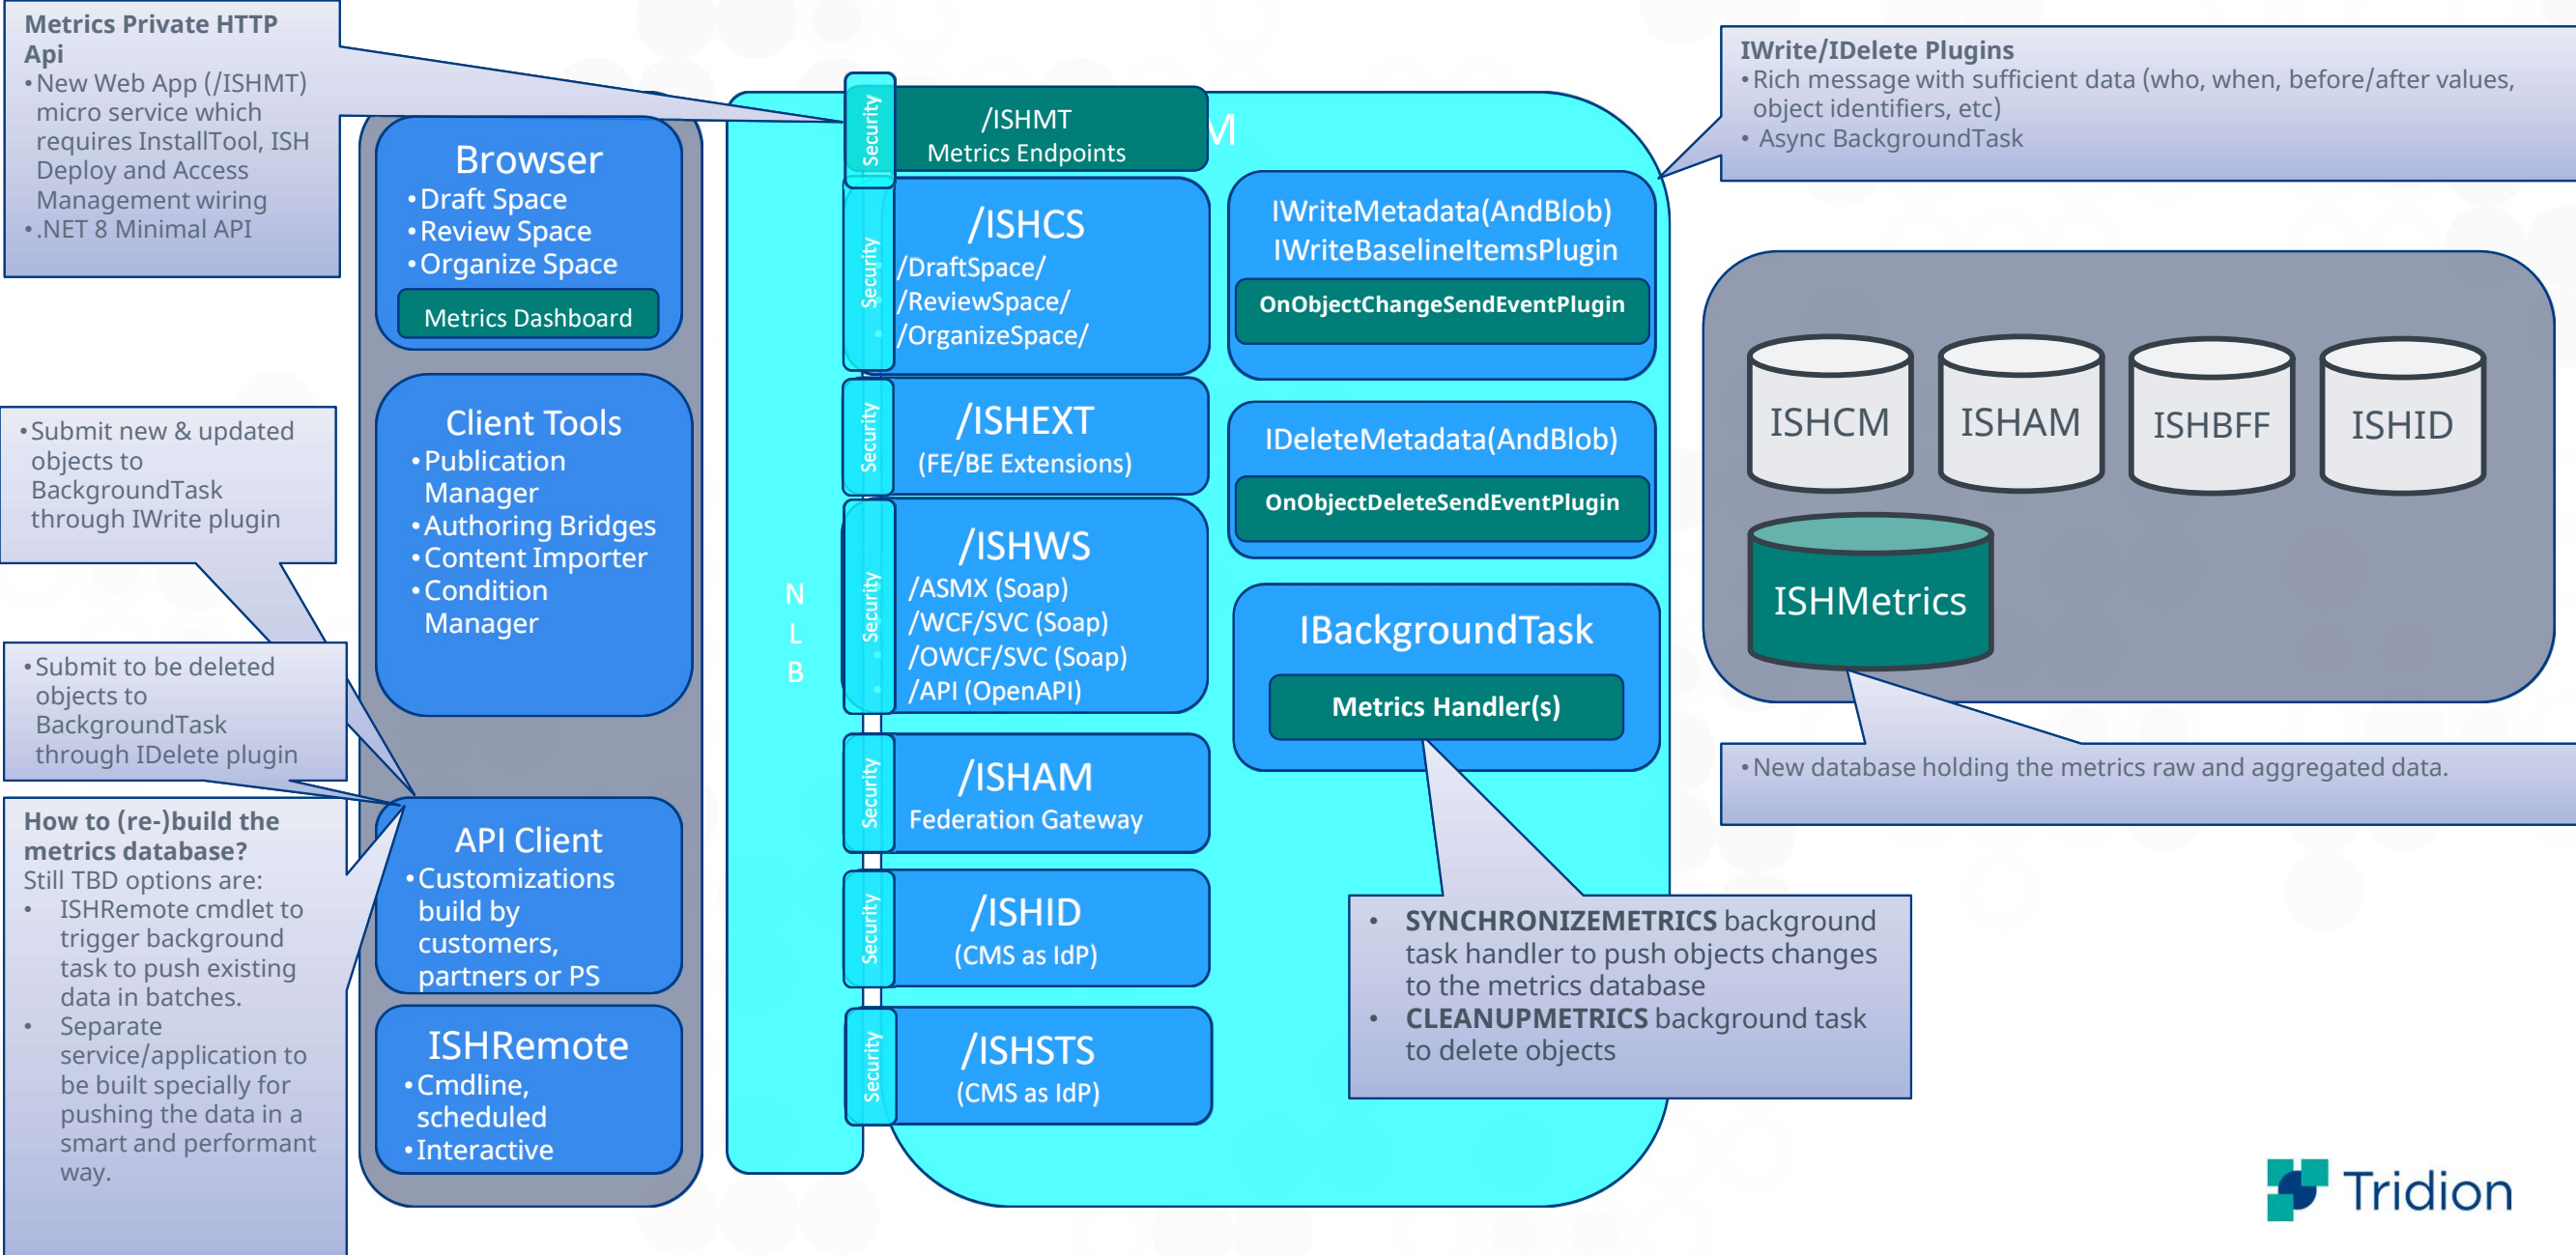

Solution Architecture

Technical approach

Metrics webservice

Integration with Access Management

- New service and roles
 - Service: Tridion Docs Metrics API
 - Roles: User and Administrator
 - authorization in a new Metrics webservice
- New Service account: Metrics API Client
 - service to service communication (background task with Metrics webservice)

The screenshot shows the 'Claims' configuration page. It has a 'Type' dropdown set to 'Global'. Below it is a table with two columns: 'Type' and 'Value'. The table contains one row with 'role' in the 'Type' column and 'Administrator' in the 'Value' column.

Type	Value
role	Administrator

The screenshot shows the 'Service accounts' configuration page. It has a 'Name' field with the value 'Metrics API Client (ServiceUser)'. Below it are sections for 'Client secrets' and 'Access settings'. The 'Access settings' section is expanded, showing a list of services and roles. The 'Tridion Docs Metrics API' service is selected, and the 'Administrator' role is checked.

Services and roles

Service	Role
Access Management API	<input type="checkbox"/> Administrator
Tridion Docs Content Manager API	<input type="checkbox"/> User
Tridion Docs Web Extensions API	<input type="checkbox"/> User
Tridion Docs Metrics API	<input checked="" type="checkbox"/> Administrator <input type="checkbox"/> User

v

Delete plugins similar to Write plugins

Proposed interface:

Current access model allows read or write access only on the folders. Child folders get the same access similar to the parent folder. In this way, we do not have the complete control on the child folder's objects like graphics or topics. If we have the Delete plugins with the help of metadata on the items, delete action can be controlled more precisely.

v

Allow delete only if an Item is not published to Dynamic Delivery

In SDL Docs CMS, users can delete a publication, even after it has been published to Dynamic Delivery and has a "Draft" status. This results in entries in the broker database that cannot be removed because they are no longer associated with any item in the CM database. Over time the orphan items keep increasing in the broker database and could be part of the content returned from the PCA service. This could result in unexpected content to different clients consuming content from PCA.

I suggest forcing the condition "allow delete only if not published" when deleting an item from CMS.

Neman Syed

over 3 years ago

Hi all. A user deleted the language-level object that contains the actual content of a topic. What are our options to undelete? Is there any well-hidden recycle bin?

Open

Opening the object 'BA v.1 - en' failed. The language is not available.

OK

If not, why not? If yes, why is it hidden/how do we reveal it?

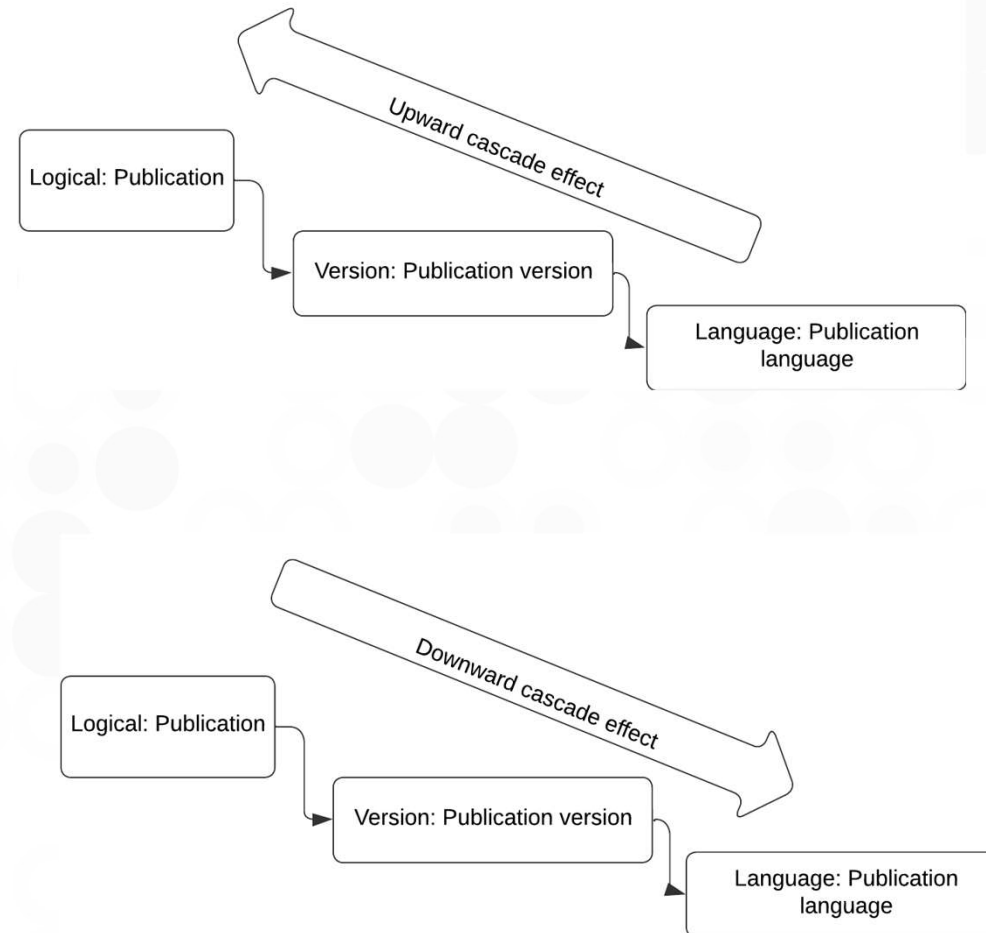

Thanks!

IDeleteMetadata Plugin

- An extension point to extend the functionality of Tridion Docs
- Supported for objects
 - ISHMasterDoc, ISHModule, ISHIllustration, ISHTemplate, ISHLibrary, ISHPublication, ISHBaseline

Cascade effects of deleting objects

- When you delete a logical object, version item or language item, the deletion can have an upward or downward cascade effect.
- **Upward cascade effect**
 - If you delete the last remaining item of a lower level, you trigger the deletion of its higher-level item. That is:
 - Deleting the last remaining language item of a version triggers the deletion of that version.
 - Deleting the last remaining version of a logical object triggers the deletion of that logical object.
- **Downward cascade effect**
 - If you delete an item of a higher level, you automatically trigger the deletion of all of its lower-level items. That is:
 - Deleting a version item triggers the deletion of all language items in that version item.
 - Deleting a logical item triggers the deletion of all versions of that logical item, and of all language items in all versions.

Conditions on IDeleteMetadata Plugin

- Two conditions are available to handle the triggering of the plugin
 - *IShLevel*
 - *OriginalLevel*
- Examples
 - If a delete plugin has **ISHLevel** set to **Ing**, and **OriginalLevel** not set at **all**, then the plugin executes whenever a language item is deleted.
 - If a delete plugin has both **ISHLevel** and **OriginalLevel** set to **Ing**, then the plugin executes only when a language item is directly deleted.
 - If a delete plugin has **ISHLevel** set to **Ing** and **OriginalLevel** set to **logical**, then the plugin executes only when a language item is deleted as an indirect result of its higher-level logical item being deleted.

Metrics IDelete plugins

- Keep in sync Metrics storage and Tridion Docs Content Manager
- RaiseSyncDeleteDocumentObjectEvent
 - Clean up Metrics storage once document object or its version is deleted in Tridion Docs Content Manager
- RaiseSyncDeletePublicationEvent
 - Clean up Metrics storage once publication or its version is deleted in Tridion Docs Content Manager
- Both are enabled out of the box but not doing a synchronization
 - Require Metrics Hotfix

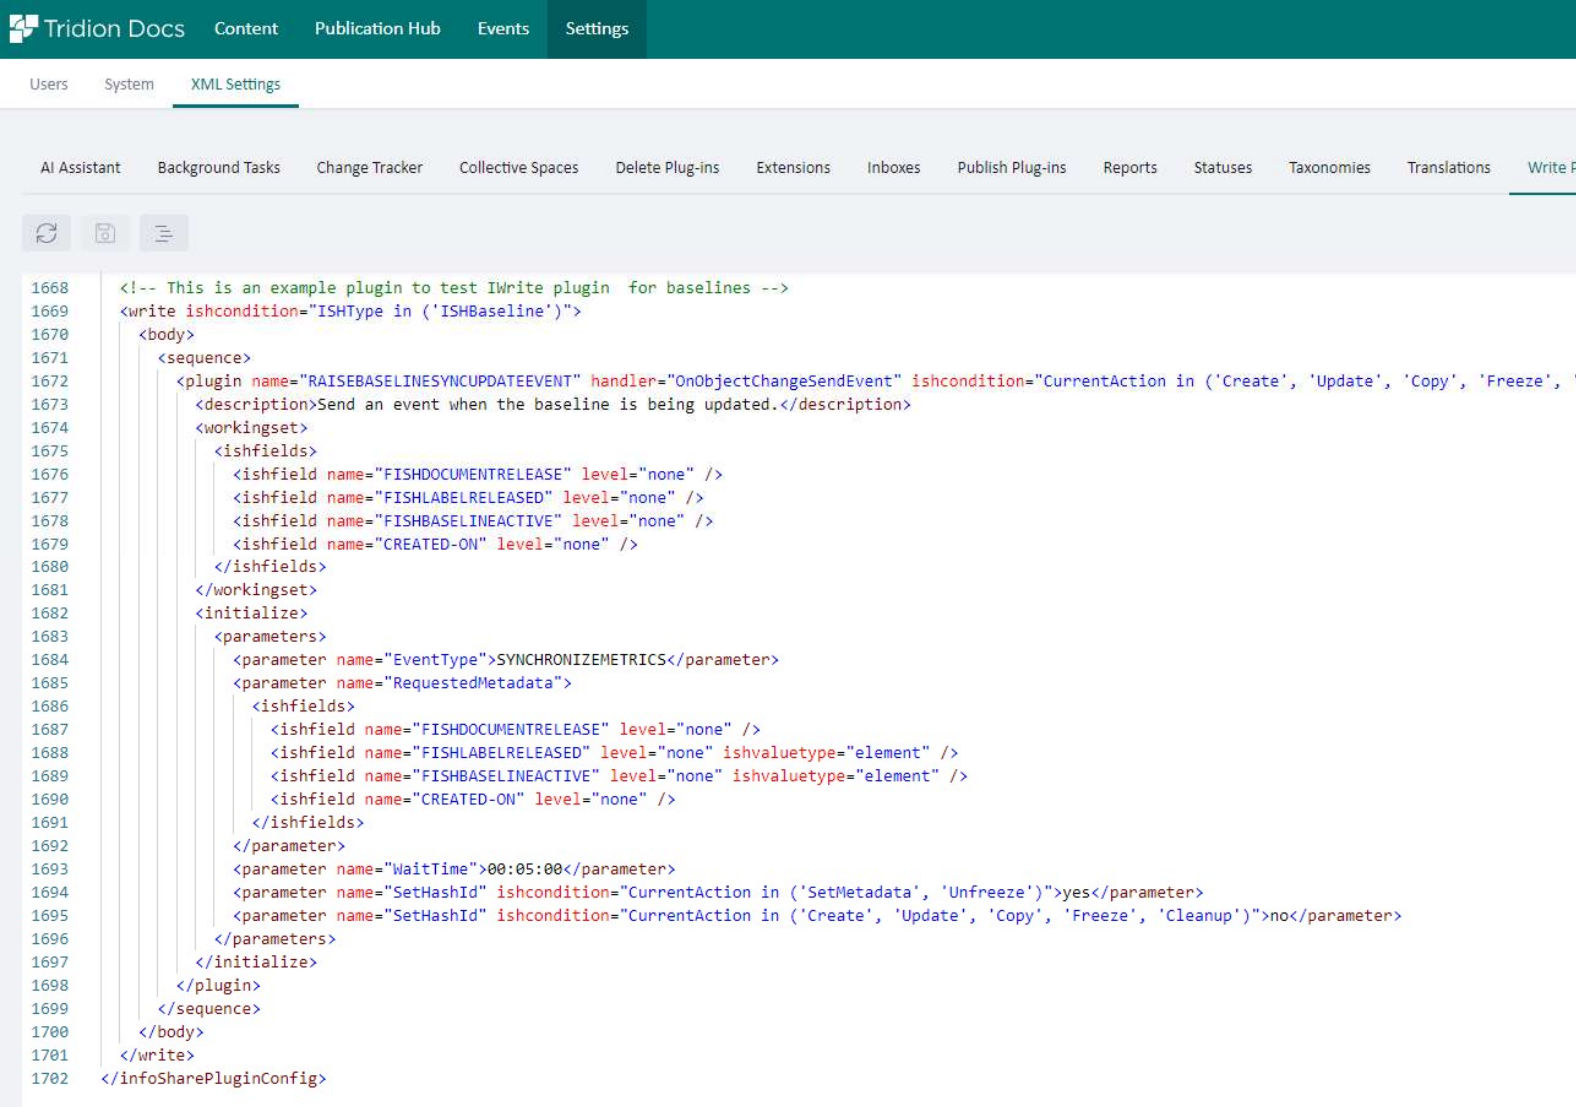

IWrite Plugins

IWrite Plugins

- An extension point to extend the functionality of Tridion Docs.
- Currently we have two kinds of IWrite plugins
 - IWriteMetadataAndBlobPlugin
 - IWriteMetadataPlugin
- Supported for objects
 - ISHMasterDoc, ISHModule, ISHIllustration, ISHTemplate, ISHLibrary, ISHPublication, ISHProject and ISHAnnotation

IWrite Plugins for baseline

- Supporting
 - Existing IWriteMetadataPlugin
- New IWrite plugin
 - IWriteBaselineItemsPlugin
- New supported objects
 - ISHBaseline

The screenshot displays the Tridion Docs interface, specifically the XML Settings editor. The top navigation bar includes 'Tridion Docs', 'Content', 'Publication Hub', 'Events', and 'Settings'. Below this, a secondary bar shows various system settings like 'Users', 'System', and 'XML Settings'. The main content area is titled 'XML Settings' and contains a list of settings including 'AI Assistant', 'Background Tasks', 'Change Tracker', 'Collective Spaces', 'Delete Plug-ins', 'Extensions', 'Inboxes', 'Publish Plug-ins', 'Reports', 'Statuses', 'Taxonomies', 'Translations', and 'Write P'. The 'Write P' setting is selected, showing an XML configuration for an IWrite plugin. The XML code is as follows:

```
1668 <!-- This is an example plugin to test Iwrite plugin for baselines -->
1669 <write ishcondition="ISHType in ('ISHBaseline')">
1670   <body>
1671     <sequence>
1672       <plugin name="RAISEBASELINESYNUPDATEEVENT" handler="OnObjectChangeSendEvent" ishcondition="CurrentAction in ('Create', 'Update', 'Copy', 'Freeze', 'Unfreeze', 'Clean')">
1673         <description>Send an event when the baseline is being updated.</description>
1674         <workingset>
1675           <ishfields>

BackgroundTask	Table	Task, History	n/a	n/a	n/a	Table before/after entries
Event	Table	Progress, Detail	n/a	n/a	n/a	Table before/after entries

Display name

Replace username by display name – Why..?

- Usernames are used as login names and aren't always easy to identify the actual user.
- Display name contains the full name of the user
- Currently, in Organize Space, Collective Spaces and Client Tools, we do not make use of Display name – Username is shown instead
- No check on display name uniqueness

SHORT DESCRIPTION

Draft Space

 is an RWS web application that lets you create and update content in the context of a publication.

Draft Space

 provides a way to create DITA content for

Content Manager

 without a need to be familiar with an XML editor. It is a fast and easy way for subject matter experts (SMEs) to directly contribute to publications.

Some knowledge of basic principles of Content Management Systems and of modular writing can help improving the consistency between SMEs and other authors' contributions.

SECTION

Collective Spaces: Draft Space training

To get acquainted with Draft Space capabilities, check the "Tridion Docs - Collective Spaces: Draft Space" course.

Display name - Client Tools

Display name for locked items

- Current CHECKED-OUT-BY field is a string containing the username
 - Renaming username doesn't update this field
- New 'FISHCHECKEDOUTBY' field contains the link to the user object
- Database Upgrade Tool (DBUT)
 - Migrates CHECKED-OUT-BY to FISHCHECKEDOUTBY
 - When CHECKED-OUT-BY contains a username that doesn't exist the lock from the document object is removed
 - All locked (checked out) items are reindexed
 - Removes CHECKED-OUT-BY field
- Business code is updated to use FISHCHECKEDOUTBY
- Please update customizations that use CHECKED-OUT-BY to FISHCHECKEDOUTBY

Display name - Database Upgrade Tool (DBUT)

Console output:

[INFOSHARE BUSINESS LOGIC UPGRADE TO 15.1.0 - MIGRATING THE 'CHECKED-OUT-BY' FIELD]
[AddFISHCheckedOutByField.xml] Adding new FISHCHECKEDOUTBY field to the configuration
[FixItemsCheckedOutByNonExistingUsers.sql] **Fix Document Objects that are checkout by non existing users.**
[Trisoft.Setup.DBUpgradeTool.Migration150100.MigrateCheckedOutByField] Migrating the 'CHECKED-OUT-BY' field.
Total of 155 records has been updated

Modern Authentication

Modern Authentication

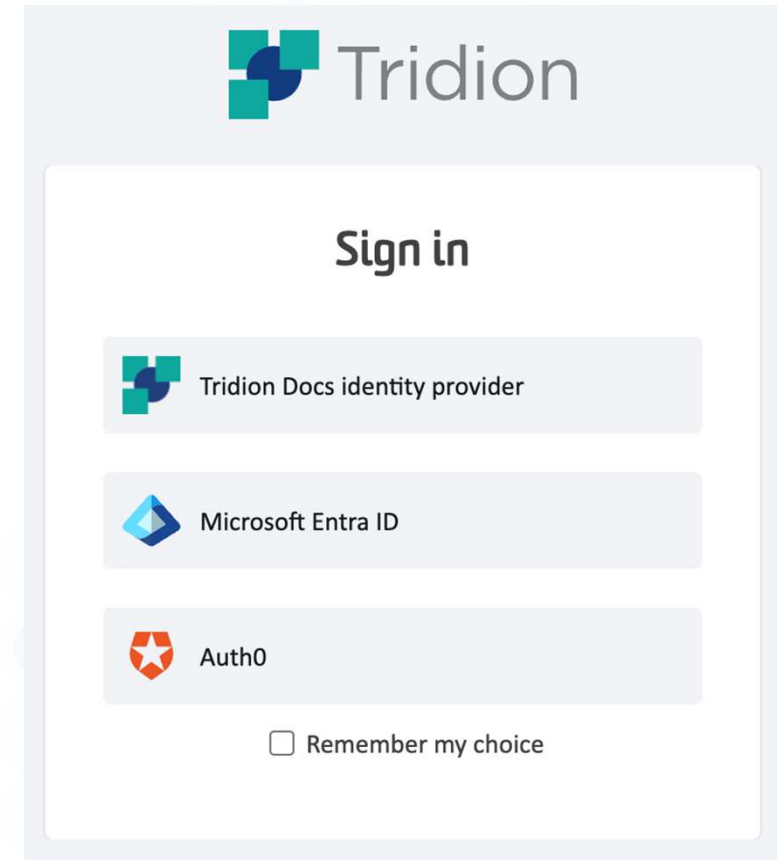

Modern Authentication - Access Management

Modern Authentication – Access Management

- Remember my identity provider
 - Cookie with name **RememberedIdpSelection** containing the key to the identity provider with an expiration of 1 year
 - Logged out removes the remembered identity provider by removing the cookie

The image shows a Tridion sign-in interface. At the top, the Tridion logo is displayed. Below it, the text "Sign in" is centered. There are three selectable options for identity providers, each with a small icon and a text label: "Tridion Docs identity provider" (with a green and blue icon), "Microsoft Entra ID" (with a blue icon), and "Auth0" (with a red star icon). At the bottom of the form, there is a checkbox labeled "Remember my choice".

Modern Authentication – Access Management

Service Account secret expiration can set in the future, default is 1 year but can be adjusted.

 Be sure to copy the secret to a secure location. After saving a new secret, it cannot be retrieved.

Modern Authentication - Examples

Modern Authentication – Desktop Application Example

- How to require a token from Access Manager
 - Client credential flow
 - Authorization code flow with PKCE (preferred)
- Token management
 - How to encapsulate the token in a call to the Web Service (SOAP)
 - How to refresh a token

Who am I

Desktop Application with Modern Authentication using Tridion Docs Web Services (SOAP/WCF)

The example shows two flows, client credential and authorization code flow with pkce (preferred) based on [OpenID Connect](#), it uses the [IdentityModel.OidcClient](#) NuGet Package which does the heavy lifting for retrieving a token. It contains some token caching including refreshing. Not all edge cases are covered but it gives a good starting point of how to implement modern authentication in Desktop applications.

Some explanation:

- Client credential flow works with service account defined in Access Management.
- Authorization code flow will launch a browser opening Access Management where you can select the identity provider to login.
- Using authorization code flow requires registering the application in Access Management.

Identity providers

Applications

Users

Service accounts

Applications

Find applications

Register application

Manage the applications defined for authentication in Access Management, including their allowed redirect URLs.

- The allowed redirect URLs must be <http://127.0.0.1> which is used for the communication between the browser and the Desktop app.
- The Client ID of the application is used in the Desktop for allowing communication with Access Management.

- Make sure the user has access to the application, preferably configured in the identity provider.

```

Modern Authentication - Collective Spaces Sidebar Example

- Implementers can be creative and put the service side component into Tridion Docs MVC web application.
- Tridion Docs MVC web application does the authentication
- Uses API25 for getting the number of annotations
- URLs must point to the application URL and not ISHCM like it was previously
 - <https://fqdn/DraftSpace/MVC/....>
 - <https://fqdn/ReviewSpace/MVC/...>

Modern Authentication - Web Applications

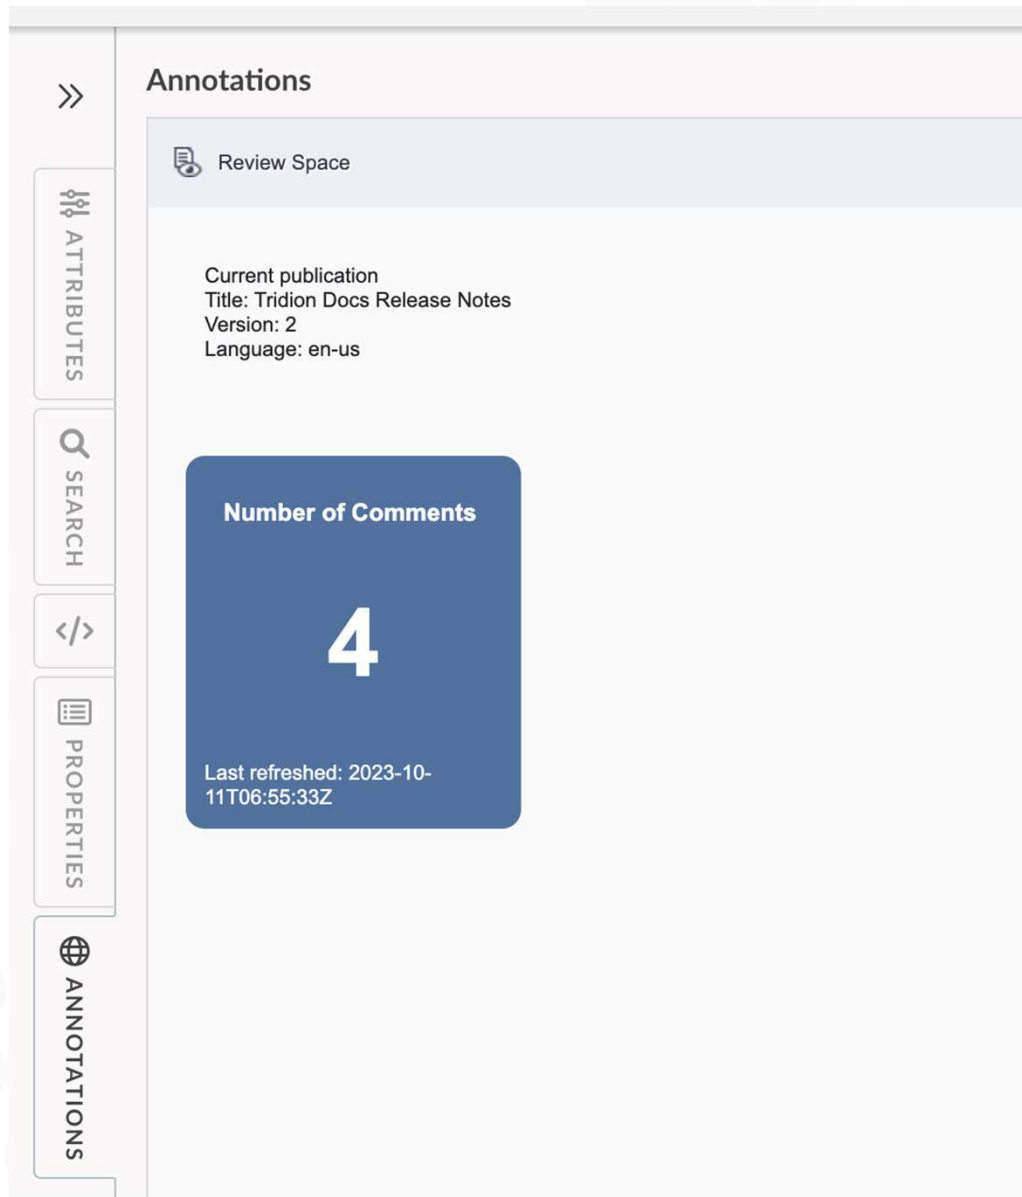

Cookie size: 354 bytes
Bearer token size: 4000 bytes

Mordern Authentication – BFF proxying request

- Note that all incoming URLs use BASEURL
 - So https://ish.example.com/ requests landing on the BFF go again over the Load Balancer and might be ending up on a different server/host
- Based on URL path part the request is proxied to another service

Type	Incoming BASEURL Url	Forward BASEURL Url	Remarks
Organize Space Api Hosting (OApi)	.../ISHCS/OrganizeSpace/ OApi /**	.../ISH <u>WS</u> /Api/**	All OpenAPI-REST calls of Organize Space end up on the ISHWS/API Web Application
Organize Space ASP.NET Hosting (MVC)	.../ISHCS/OrganizeSpace/ Mvc /**	.../ISH <u>CM</u> /**	All ASP.NET reused pages like Event Monitor end up on the ISHCM Web Application.
Organize Space Extensions Hosting	.../ISHCS/OrganizeSpace/ Extensions /**	.../ISH <u>EXT</u> /**	All OpenAPI-REST calls regarding Organize Space Extensionability end up on the separate ISHEXT Web Application
Draft Space / Review Space Api Hosting (XAPI)	.../ISHCS/DraftSpace/ Api /** .../ISHCS/ReviewSpace/ Api /**	.../ISH <u>CM</u> /Api/**	All XAPI-REST calls of Collective Spaces end up on the ISHCM Web Application.

Modern Authentication – Collective Spaces Sidebar Example

MVC Application example used as a sidebar in Collective Spaces

This example shows the number of annotations in the sidebar of Collective Spaces.

Build Project

- Use Visual Studio 2022 for building the solution

Installation

- Copy file bin\SidebarExample.dll to folder \InfoShare\Web\Author\ASP\bin
- Copy file Scripts\Sidebar.js to folder \InfoShare\Web\Author\ASP\Scripts
- Copy file Styles\Sidebar.css to folder \InfoShare\Web\Author\ASP\Styles
- Copy file Views\Annotations\index.html folder \InfoShare\Web\Author\ASP\Views\Annotations
- Copy file Views\Sidebar\Index.cshtml folder \InfoShare\Web\Author\ASP\Views\Sidebar
- Copy file Views\Shared_SidebarLayout.cshtml folder \InfoShare\Web\Author\ASP\Views\Shared
- Update \InfoShare\Web\Author\ASP\CollectiveSpacesConfig\custom\BehaviorConfig.xml file by adding this example sidebar

```
<sidebarconfiguration>
  <extrasidebar id="draftspace-annotations-sidebar-example" ishcondition="ClientName=DraftSpace" url="
    <label>Annotations</label>
    <description>Draft Space Annotations Sidebar Example</description>
  </extrasidebar>
  <extrasidebar id="reviewspace-annotations-sidebar-example" ishcondition="ClientName=ReviewSpace" url="
    <label>Annotations</label>
    <description>Review Space Annotations Sidebar Example</description>
  </extrasidebar>
</sidebarconfiguration>
```

Modern Authentication – Custom Web Application using MVC pages

- Custom Web Applications that clone/copy ISHCM may no longer be working because MVC pages are being removed because they are ported to React using OpenAPI.
- ISHCM MVC authentication will disappear when all MVC pages are rebuild in React

Modern Authentication – Community blog posts announcement

- Community blogs posts announcement about modern authentication and an example Web Application using React and ASP.Net Core

The screenshot shows the 'Tridion Docs > General blog posts' page. The header includes navigation links for Products, Ideas, Developers, Partners, Private, and About, along with search and translate options. The main content area displays three blog posts:

- How did we do Modern Authentication in Tridion Docs 15?** by Dave De Meyer, 15 hours ago. The post discusses the purpose of the semi-technical blog post and the standard product security changes.
- Tridion achieves ISO 9001:2015 Quality Management Certification** by Chip Gettinger, 2 months ago. The post highlights the significance of the certification and the robust quality management principles.
- Bootcamp session for Tridion Docs 15 release** by Varun Sood, 6 months ago. The post mentions the bootcamp session and the new features in the upcoming Tridion Docs 15.

On the right side, there are options to subscribe by email and a list of popular tags including DITA, ISHRemote, Best Practices, SDL Knowledge Center, localization, PowerShell, sdl tridion docs, and Tridion Docs.

VERIFIED STANDARD

Veracode verified standard

RWS is the world's leading provider of technology-enabled language, content management and intellectual property offerings.

APPLICATIONS ACHIEVING VERIFIED STATUS

APPLICATION NAME:	Tridion Docs
APPLICATION DESCRIPTION:	<p>Tridion Docs provides streamlined end-to-end component content management. It includes easy web-based authoring, reviewing, versioning, translation, and publication management, underpinned by the DITA XML standard. As a true collaborative environment with a familiar Microsoft Word-style interface, subject matter experts (SMEs) in your organization can contribute their knowledge. Authors and reviewers can work simultaneously in the same document providing comments to each other, tracking and merging changes.</p> <p>Tridion Docs supports global enterprise use cases including single sourcing, product documentation, learning and training, policies and procedures, and efficient translations with delivery to multiple end points such as documents, PDFs, knowledge portals, websites, apps, chatbots, and IoT devices.</p> <p>To learn more visit https://rws.com/tridion-docs</p>
	<p>Veracode Verified Standard represents that the following application security practices are embedded into the software development process:</p> <ul style="list-style-type: none">• Assessment of first-party code using static analysis• Documentation that the application does not allow Very High flaws in its first-party code• Developer access to remediation guidance <p>Verified Standard is the first of three (3) tiers representing the Verified program.</p> <p>Learn more about the Veracode Verified program by clicking here.</p>

ISHDeploy

ISHDeploy - Delete time window for Crawler

- In previous improvements, Crawler service was extended to consider a delete time window for the operation.
- Set-ISHServiceCrawler cmdlet is extended with two new params "deleteWindowStartUtcTime", "deleteWindowEndUtcTime" for setting up the delete window.

```
Administrator: Windows PowerShell
PS C:\Users\TrisoftServiceUser> Set-ISHServiceCrawler -ISHDeployment $IshDeploy -DeleteWindowStartUtcTime "02:00:00" -DeleteWindowEndUtcTime "05:00:00"
```

ISHDeploy - Delete time window for Crawler

- To restore the delete time window, the start and end time should be set to "00:00:00" and "23:59:59" respectively.
- If there are multiple crawler services, the time window will be applied to the first one, and the rest will be the start time and the start time plus one millisecond as the time window.

ISHDeploy – Web Applications and Application Pools

ISHDeploy cmdlets are extended for new Metrics Web Application

- Set-ISHIntegrationFullTextIndex
- Set-ISHServiceFullTextIndex
- Set-ISHServiceUser

ISHRemote

ISHRemote – V8.0 *almost* Released

- *Almost* Released and tagged on the **master** branch
- Mostly v7.0 continued
 - Added Modern Authentication supporting browser redirects (Federation and MFA) and Client Credentials
 - Refactored communication and security parts keeping WS-Trust
 - Experimental OpenAPI proxies

- ISHRemote v8.0 runs on Windows, MacOS and Linux thanks to added PowerShell 7.2+ support - keeping Windows PowerShell 5.1 support!
- From the start ISHRemote was set up as a **scripting module** powered on the back by a binary compiled .NET code.
 - So, it starts with PSM1/PSD1 combination that exports cmdlets, help, table layout formatting, parameter auto completion and more.
 - The binary code, a nested module, did the **heavy lifting** on WS-Fed/WS-Trust security and **Modern Authentication**, multi-threading and more throughput performance!
- Microsoft has **split the path** of Windows-based .NET Framework and multi-platform .NET (Core), in turn PowerShell did the same.
 - Starting from ISHRemote v1 the preparations started.
 - The challenge is that the ISHRemote binary module became platform specific and had to be loaded dynamically at runtime.
- So ISHRemote does the effort to **obfuscate** differences among:
 - Deprecated .NET Framework and .NET (Core) 6+ world
 - Deprecated Windows PowerShell 5.1 and multi-platform PowerShell 7.2+
 - Deprecated (at least since Tridion Docs 15/15.0.0) SOAP with WS-Fed/WS-Trust security and Modern Authentication over OpenIDConnect
- One ISHRemote to rule them all!

ISHRemote – V8.0 *almost* Released

- Added 2 new field levels
 - Project
 - Assignee
- No functionality for retrieving Projects and assignees
 - Only available in OpenAPI and not in WCF / SOAP
- Updated Remove-IshPublicationOutput cmdlet for Tridion Docs 15.1
 - Delete Publication which do not have any outputs anymore is now done in the Tridion Docs business logic

ISHRemote - V8.0 on Tridion Docs 14SP4/14.0.4 and earlier

- Same as ISHRemote v7.0, protocol will be [WcfSoapWithWsTrust](#)
- PowerShell 7.2+, hosted by .NET 6+, cannot handle Windows Authentication

ISHRemote v8.0 Protocol	Authentication Protocol	New-IshSession	On Windows PowerShell 5.1 powered by .NET Framework 4.8	On PowerShell (Core) 7.2+ powered by .NET (Core) 6.0+
WcfSoap With WsTrust <div>ISHRemote v8.0 used on Docs 14SP4/14.0.4 and earlier will use WcfSoapWithWsTrust</div>	usernamemixed (typically ISHSTS)	New-IshSession -Protocol WcfSoapWithOpenIdConnect ` -WsBaseUrl https://ish.example.com/ISHWS/ ` -IshUserName admin -IshPassword admin	Supported	Supported
	windowismixed (typically ADFS using Windows Authentication)	New-IshSession -Protocol WcfSoapWithOpenIdConnect ` -WsBaseUrl https://ish.example.com/ISHWS/ #over-NetworkCredentials	Supported	Platform Not Supported

• “windowismixed” and “usernamemixed” are typically used on Tridion Docs 14SP4/14.0.4 and earlier
• ISHRemote v1.0, v7.0 and v8.0 work the same when used on Windows PowerShell 5.1

“windowismixed” is not required anymore starting Tridion Docs 15.x/15.x.0 edition as Microsoft ADFS and Light-weight-Windows-authentication (over ISHSTS) are gone.

ISHRemote v8.0 on Tridion Docs 15.x/15.x.0

- If protocol on a New-IShSession cmdlet is forced to [WcfSoapWithWsTrust](#), then it behaves the same as ISHRemote v7.0 and earlier
 - WS-Federation/WS-Trust over -IshUserName/-IshPassword parameters, typical ISHSTS setups
 - WS-Federation/WS-Trust over implicit ActiveDirectory NetworkCredentials , typical ADFS setups
 - Note: Adding -Protocol WcfSoapWithWsTrust makes your 14SP4/14.0.4 and earlier scripts work on 15.0
- If protocol is not mentioned, it defaults to [WcfSoapWithOpenIdConnect](#)
 - Modern Authentication like Publication Manager or Organize Space, etc over System Browser
 - Modern Authentication over -ClientId/-ClientSecret coming from Access Management (ISHAM)
 - Note: ISHWS/OWCF web services have feature parity to ISHWS/WCF (and actually also ISHWS/*.ASMX)
- If protocol is forced to [OpenApiWithOpenIdConnect](#)
 - You mostly get fully operational WcfSoapWithOpenIdConnect
 - You also get an OpenAPI [experimental](#) proxy on your IShSession object (the future)

ISHRemote v8.0 on Tridion Docs 15.x/15.x.0

ISHRemote v8.0 Protocol	Authentication Protocol	New-IshSession	On Windows PowerShell 5.1 powered by .NET Framework 4.8	On PowerShell (Core) 7.2+ powered by .NET (Core) 6.0+
WcfSoap With WsTrust <div>ISHRemote v8.0 used on Docs 14SP4/14.0.4 and earlier will use WcfSoapWithWsTrust</div>	usernamemixed (typically ISHSTS)	New-IshSession -Protocol WcfSoapWithWsTrust ` -WsBaseUrl https://ish.example.com/ISHWS/ ` -IshUserName admin -IshPassword admin	Supported	Supported
	windowsmixed (typically ADFS using Windows Authentication)	New-IshSession -Protocol WcfSoapWithWsTrust ` -WsBaseUrl https://ish.example.com/ISHWS/ #over-NetworkCredentials	Supported	Platform Not Supported
WcfSoap With OpenIdConnect	Client Credentials (typically ISHAM client/secret)	New-IshSession -Protocol WcfSoapWithOpenIdConnect ` -WsBaseUrl https://ish.example.com/ISHWS/ ` -ClientId "c82..." -ClientSecret "ziK...=="	Supported	Supported
	Authorization Code Flow with PKCE (typically, System Browser)	New-IshSession -Protocol WcfSoapWithOpenIdConnect ` -WsBaseUrl https://ish.example.com/ISHWS/ #over-SystemBrowser	Supported	Supported
OpenApi With OpenIdConnect <div>ISHRemote v8.0 has no cmdlets using OpenAPI so fall back to WcfSoapWithOpenIdConnect (the future)</div>	Client Credentials (typically ISHAM client/secret)	New-IshSession -Protocol OpenApiWithOpenIdConnect ` -WsBaseUrl https://ish.example.com/ISHWS/ -ClientId "c82..." -ClientSecret "ziK...=="	Supported	Supported
	Authorization Code Flow with PKCE (typically, System Browser)	New-IshSession -Protocol OpenApiWithOpenIdConnect ` -WsBaseUrl https://ish.example.com/ISHWS/ #over-SystemBrowser	Supported	Supported

ISHRemote v8.0 – Access Management

Make sure you have the ISHRemote application and Tridion Docs Content Manager API (user) selected (Identity Provider, User or Service Account level)

Access settings

- ☒ User

ISHRemote v8.0 – Code – Experimental OpenApi Proxies

```
$ishSession = New-IshSession -WsBaseUrl "https://example.com/ISHWS/" -Protocol OpenApiWithOpenIdConnect  
  
$json = $ishSession.OpenApiISH30Client.GetApplicationVersionAsync()  
$json.Result  
  
$json = $ishSession.OpenApiAM10Client.IdentityProvidersGetAsync()  
$json.Result
```

- Now that experimental OpenApi proxies are there for
 - Tridion Docs REST Web Services, so **OpenApiISH30Client** referring to future public v3.0 Api
 - Tridion Docs Access Management REST Web Services, so **OpenApiAM10Client**, referring to public v1.0 Api
- On route for SOAP to REST side-by-side samples, more validation on functional parity, etc

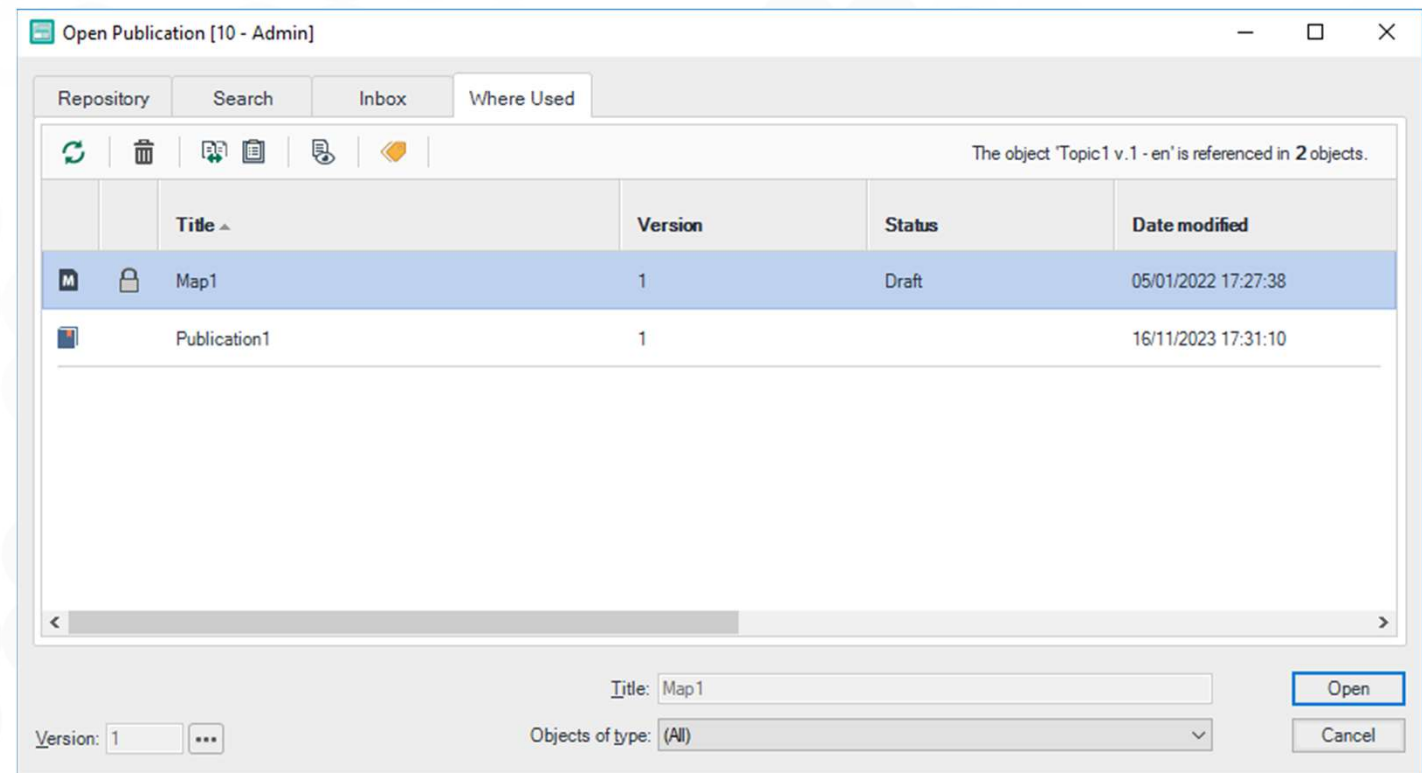

Client Tools

Client Tools - "Where Used" in Browse Repository

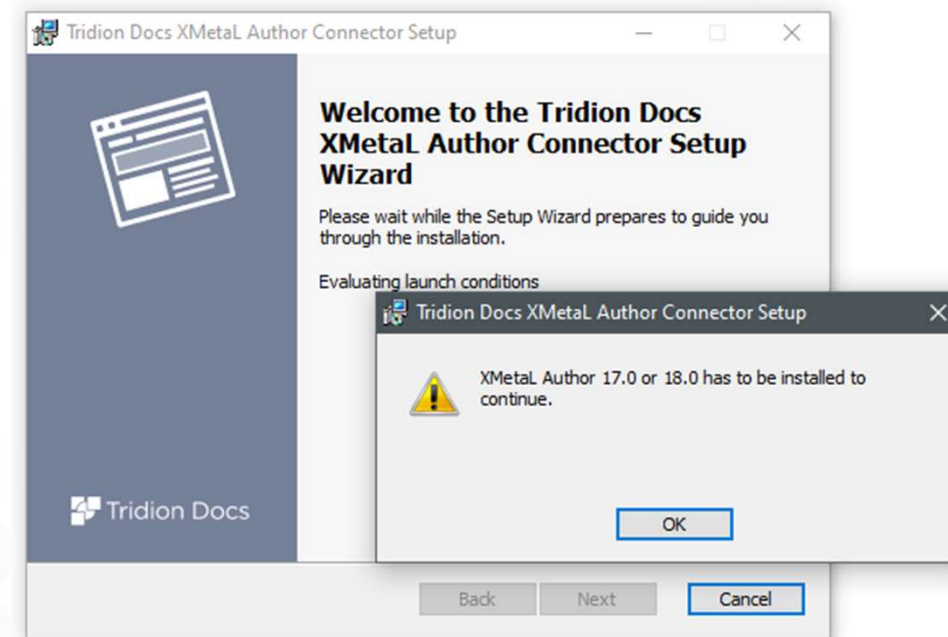

Allow users to view "Where used" information for an object when browsing through:

- Browse repository
- Search results
- Inbox

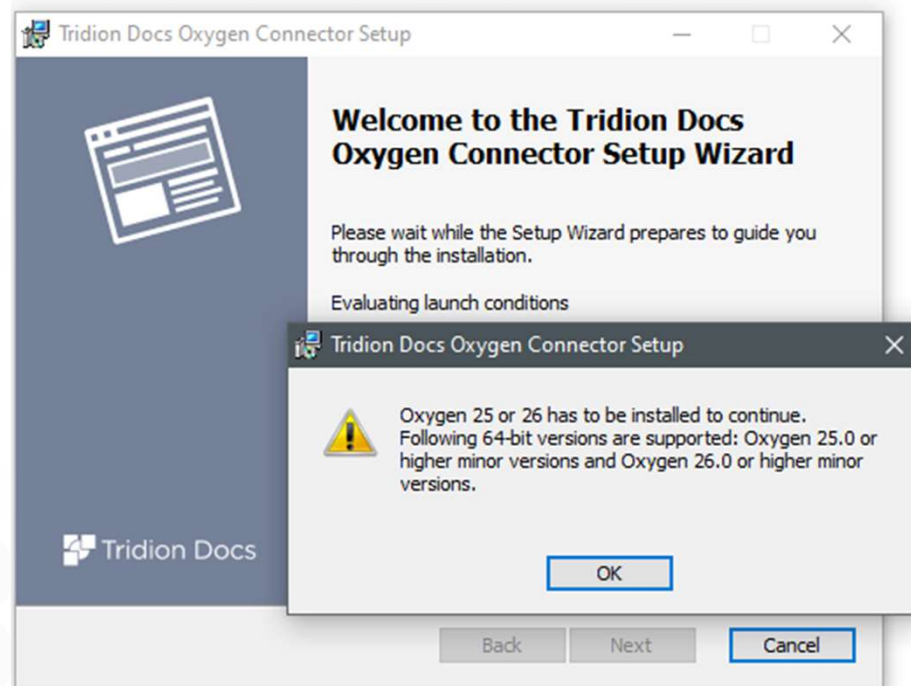

XMetaL 18 Support

- Removed support for XMetaL 14
- Added support for XMetaL 18
- Regression testing done
- Following 64-bit version will be supported:
 - XMetaL 17 (deprecated)
 - XMetaL 18 (preferred)

Oxygen 26 Support

- Removed support for Oxygen 23
- Added support for Oxygen 26
- Regression testing done
- Following 64-bit version will be supported:
 - Oxygen 25.x (deprecated)
 - Oxygen 26.x (preferred)

Client Tools – Publication Manager

Disable changing the values from combo box in the properties panel when scrolling the mouse. Making changes by scrolling the mouse wheel only works after selecting the combo box.

The screenshot shows a Windows-style dialog box titled 'Properties of Information v.2 - en-us'. It has four tabs: 'General' (selected), 'Version', 'Semantics', and 'Workflow'. The 'General' tab contains several fields: 'Title' (text box with 'Information'), 'In folder' (text box with '/General/Bootcamp/Translation Report/Topics'), 'Identifier' (text box with 'GUID-1F480854-B813-4F40-A07E-DAE033C7D207'), 'SDL product' (text box with a dropdown arrow), 'Topic type' (dropdown menu with 'Topic' selected), 'Description' (text box), 'Date created' (text box with '2022-09-05 11:07:23'), 'Date modified' (text box with '2022-09-05 11:07:23'), and 'Translation management' (checkbox labeled 'Enable translation management' which is checked). At the bottom right are 'OK' and 'Cancel' buttons.

Client Tools - Smart tagging in Publication Manager

- Smart Tagging options only available for topics

The screenshot displays the Tridion Publication Manager interface. The left pane shows a tree view of the repository structure, with 'Installing the application server' selected under '04. Installing'. The main pane shows a list of topics, with 'Advanced topics for installers v.3 - en-us' selected. A context menu is open over this topic, showing various actions. The 'Apply tags' option is highlighted, and a blue arrow points from it to the 'Suggest tags' button in the 'Properties of Advanced topics for installers v.3 - en-us' dialog box on the right. The dialog box shows the 'General' tab with fields for 'User Goals', 'Technology Breakdown', and 'Product Breakdown'. The 'Suggest tags' button is located at the bottom of the dialog box.

Client Tools – Browse repository set focus on new item

Setting the focus on the newly created item in the browse repository dialog helps finding the item and gives feedback that the item is created

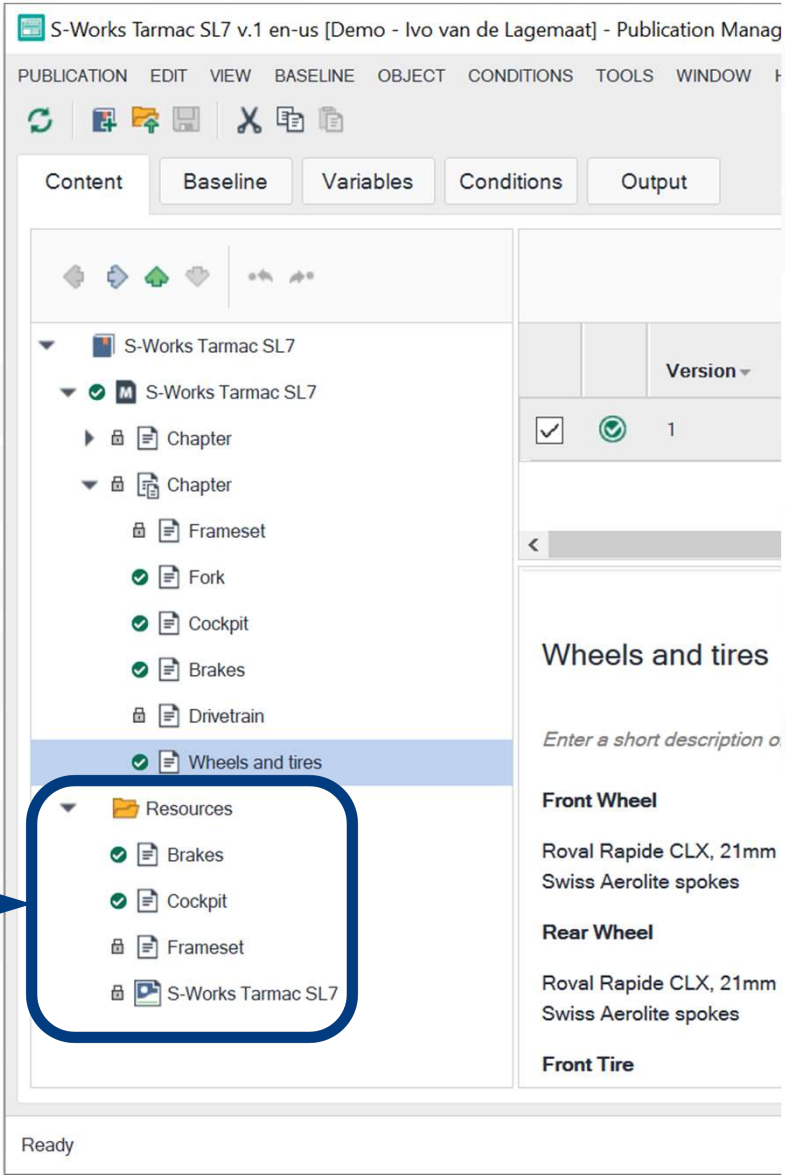

Client Tools – Publication Manager sort resources

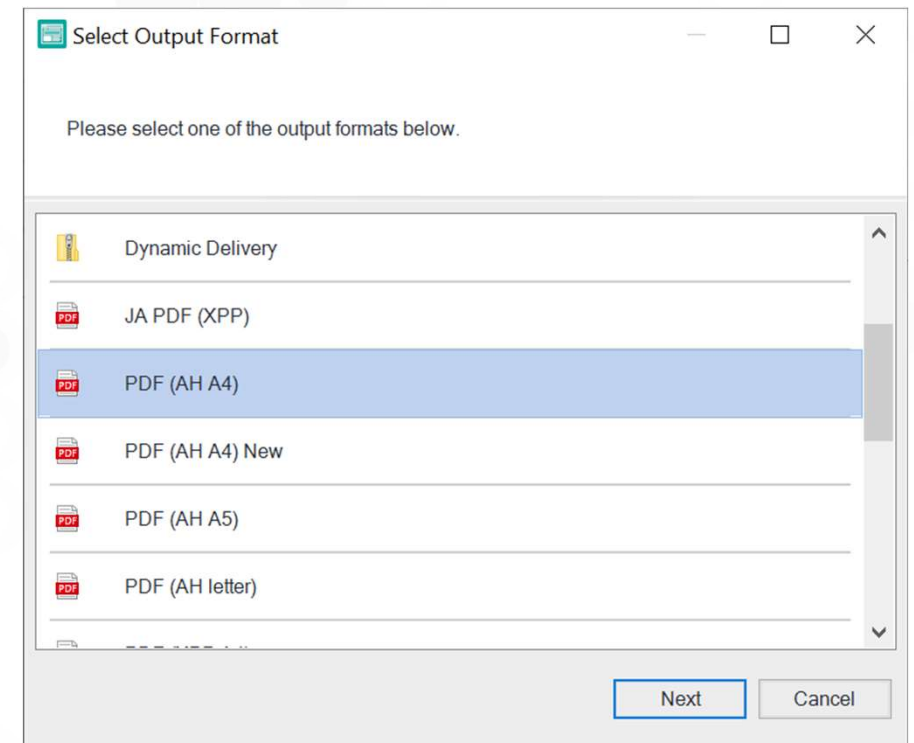

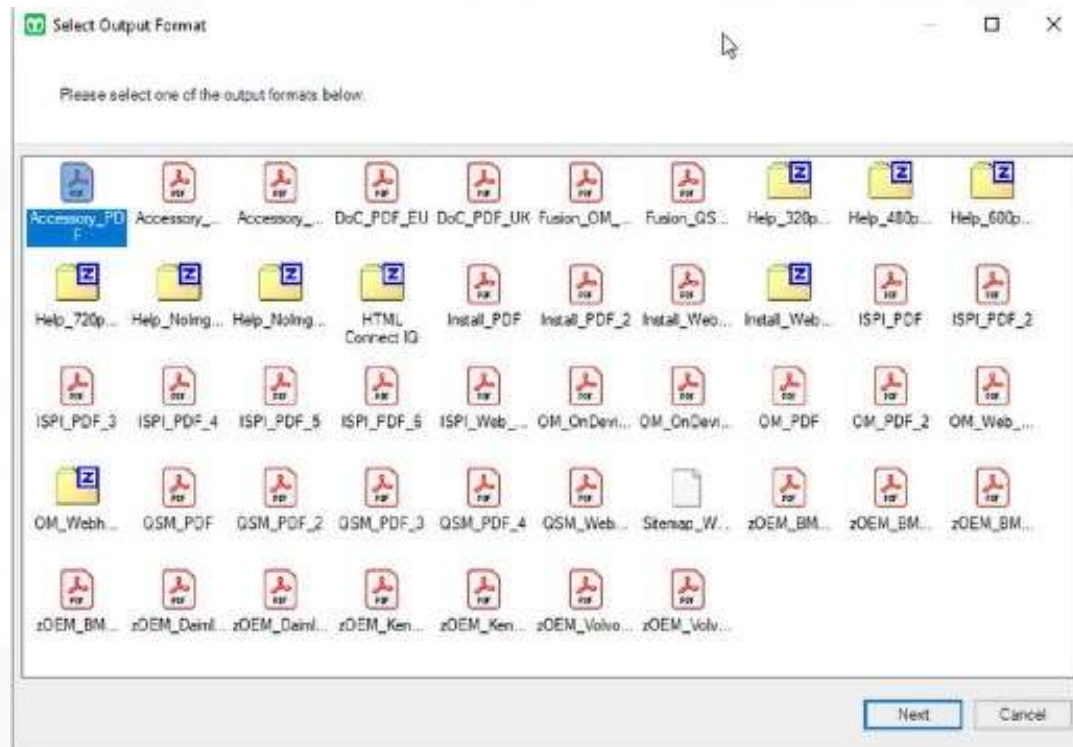

Organize Space

Resources

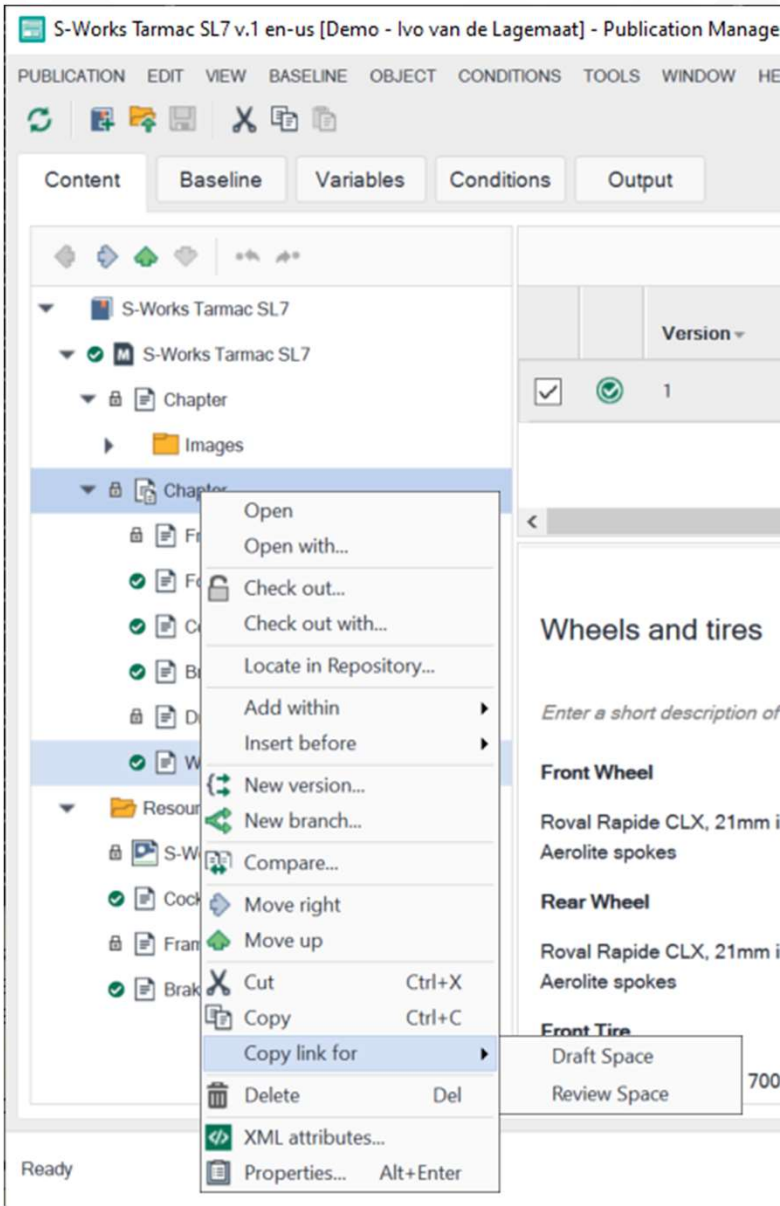

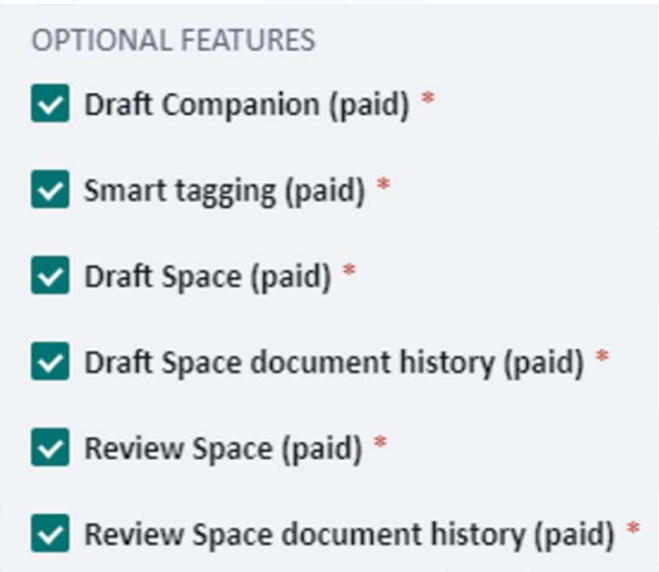

Client Tools – Select Output Format Dialog

Having an option to show the list output formats in a list with their full name displayed makes it easier to select the right one.

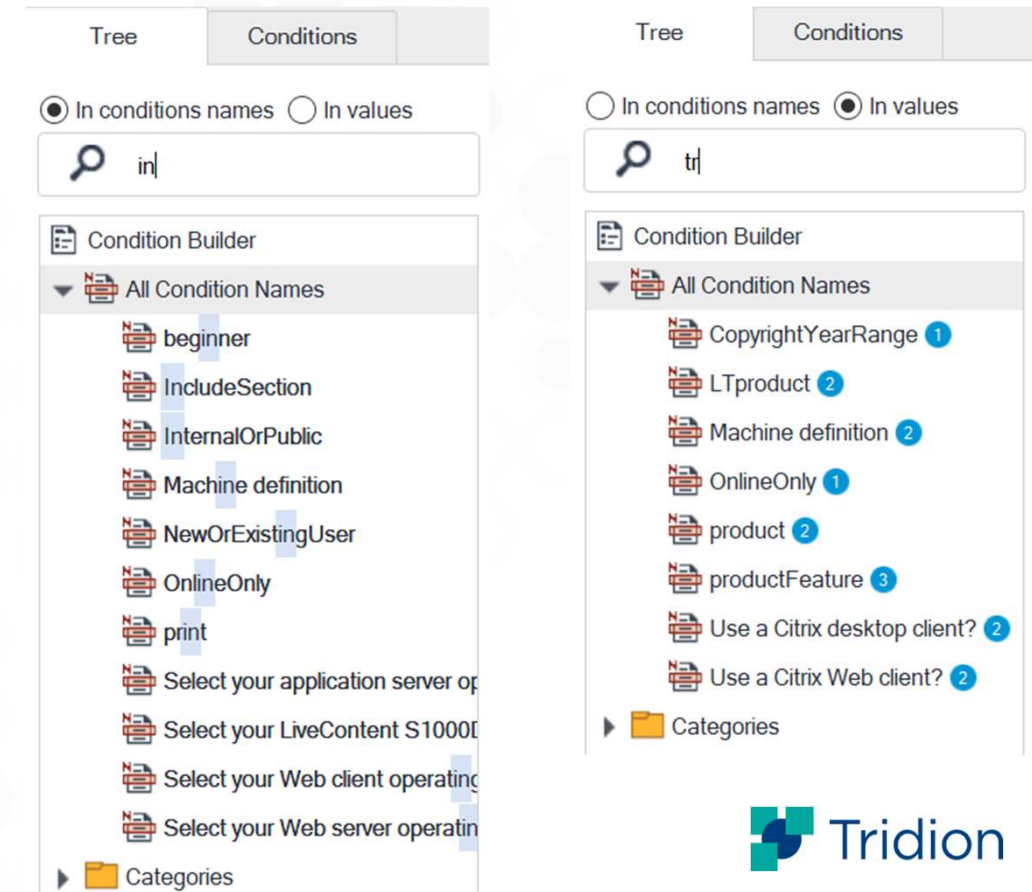

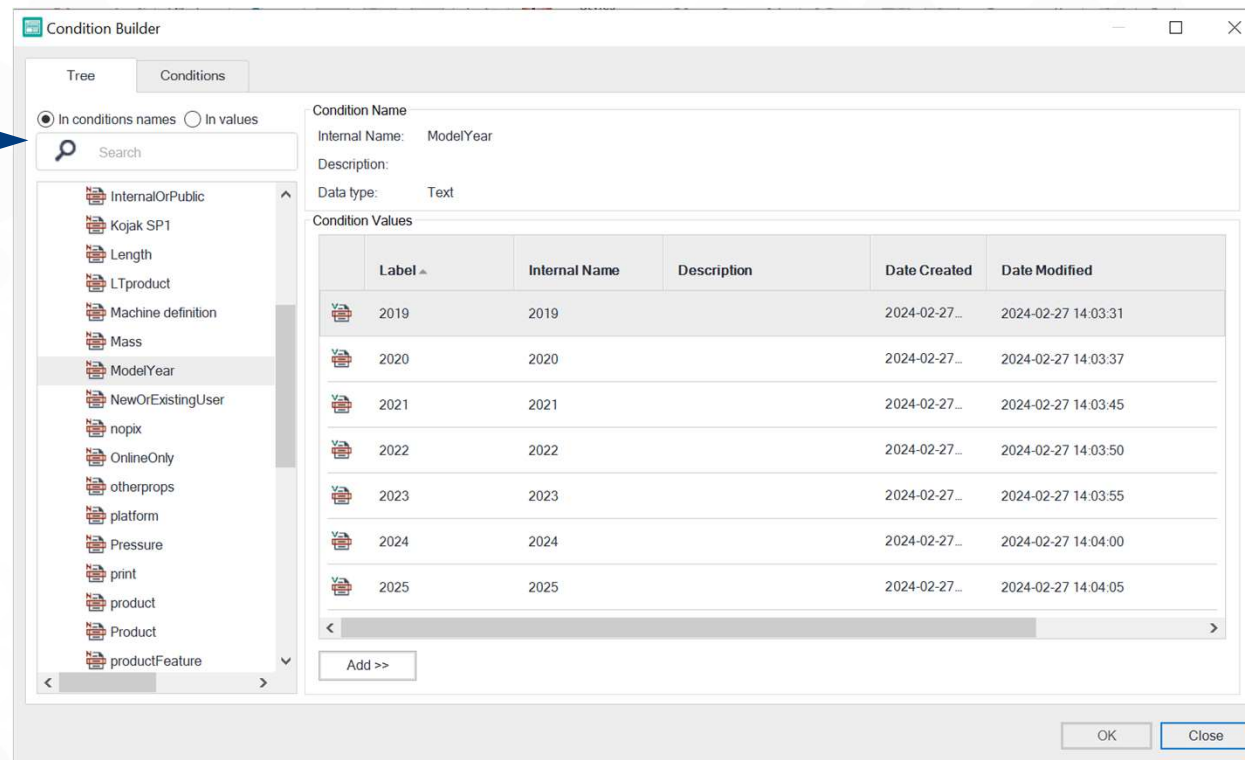

Client Tools – Enable draft/review space copy link for

- Publication Manager reads the enable draft / review Space from the configuration using WCF / SOAP endpoint
- Fields
 - FISHENABLEDRAFTSPACE
 - FISHENABLEREVIEWSPACE
- Settings are removed from ClientConfig.xml

Client Tools – Condition Builder Finding Conditions

- Finding the right condition or value can be challenging when the list of conditions is large
- Providing an option where the user can type in, or a part, of the condition / value and the tree shows only the conditions / values that are applicable.

Accounts re-creation

- When an existing TD14 environment has been upgraded to TD15 server-side, then the account remains working but **will not automatically switch** over to an anonymous account in combination with Access Management.
- To switch over to Access Management it's needed to **remove the existing account and create** the account for TD15 using Client Tools.
- Accounts are stored in %LocalAppData%\RWS\InfoShare Client\15.x\Trisoft.InfoShare.Client.config

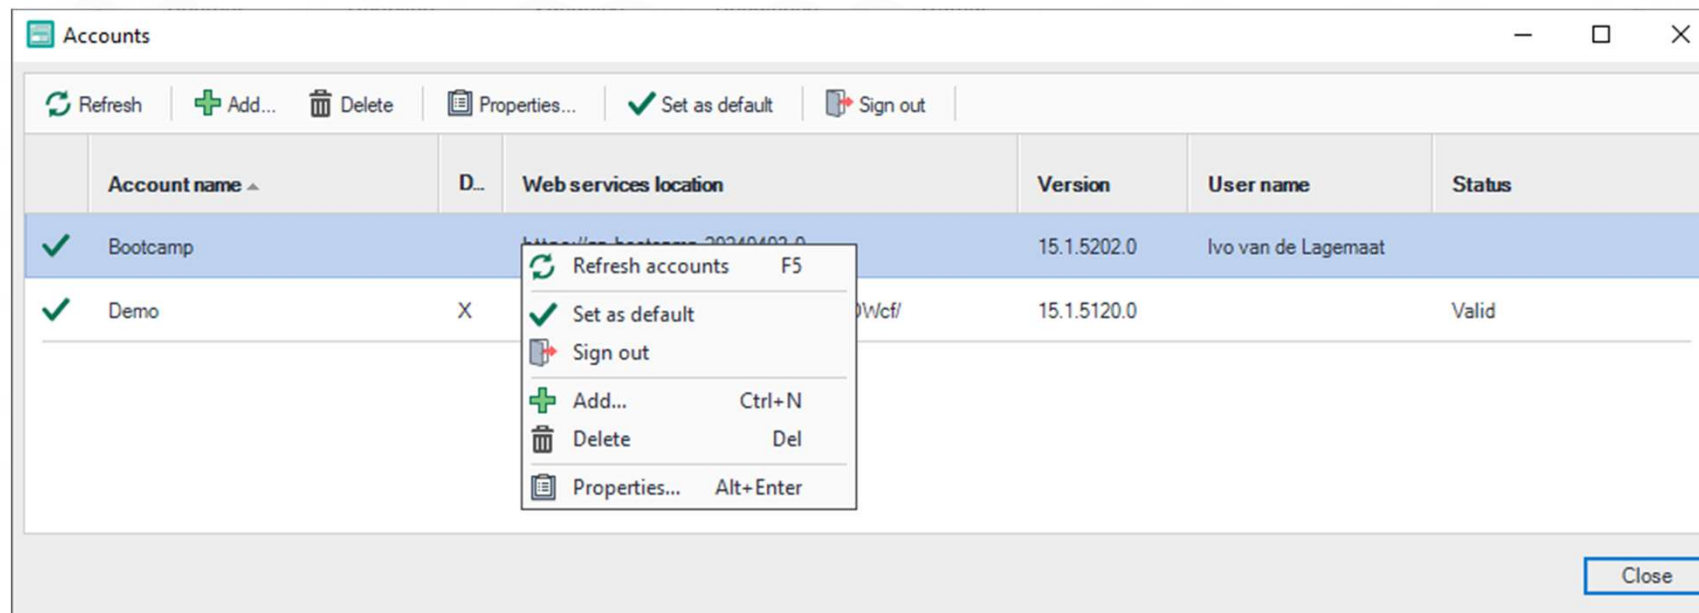

```
<connection id="UserName:admin@mecdev12qa01.global.sdl.corp/ishwsora19/infoshareauthorora19">  
<authenticationtype>UserName</authenticationtype>  
<username>admin</username>
```

```
<connection id="mecdevapp08.global.sdl.corp/ishwsora19/owcf/infoshareauthorora19" isdefault="true">  
<authenticationtype>AccessManagement</authenticationtype>
```

Client Tools – Sign In / Sign Out

- Enabling users to switch accounts in Client Tools by sign out / sign in.
- Only available in the Client Tools Accounts window
- Sign out is per Client Tool

Open in Publication Manager

Open in Publication Manager

Available on publications in "Lists", "Where used" and "Publication Hub"

Note: Publication Manager will always open on the root map

Open in Publication Manager

Open in Draft Space

Open in Review Space

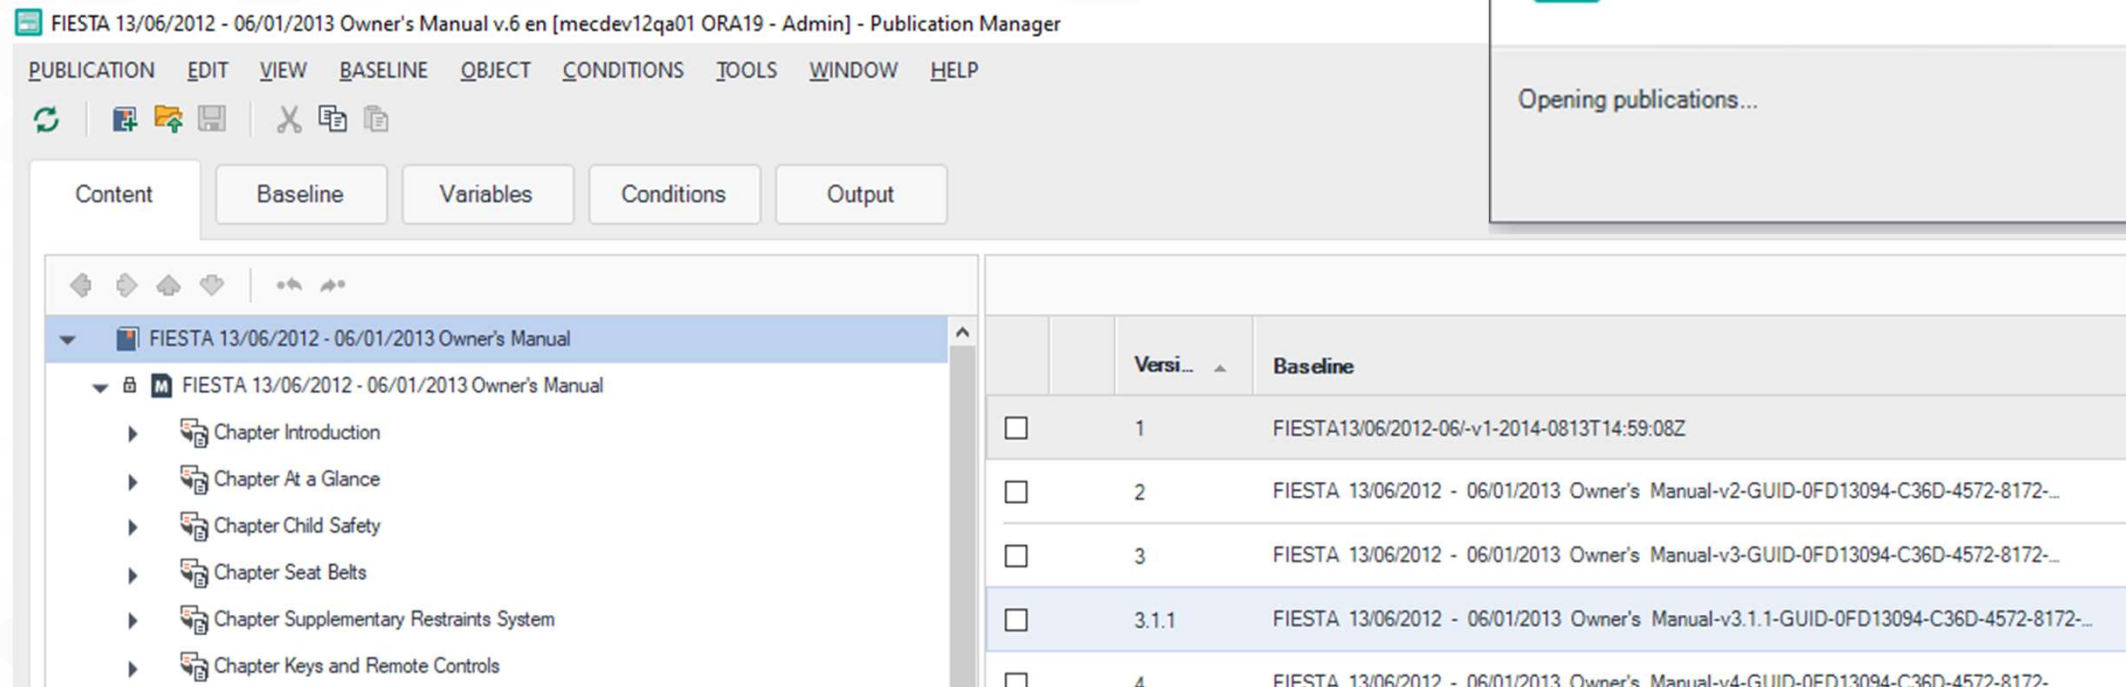

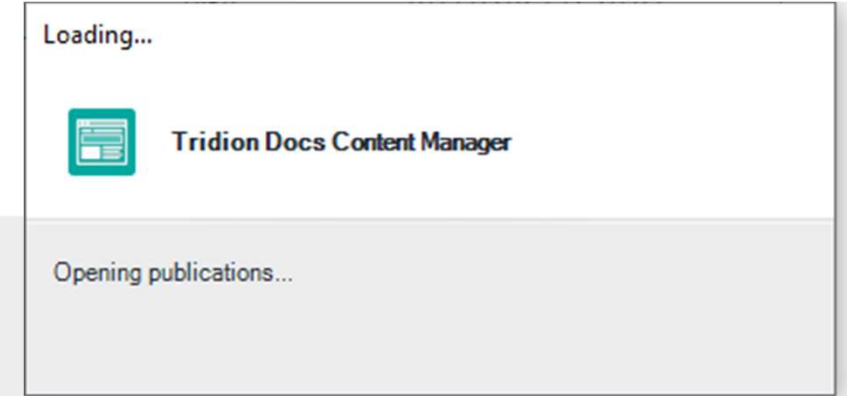

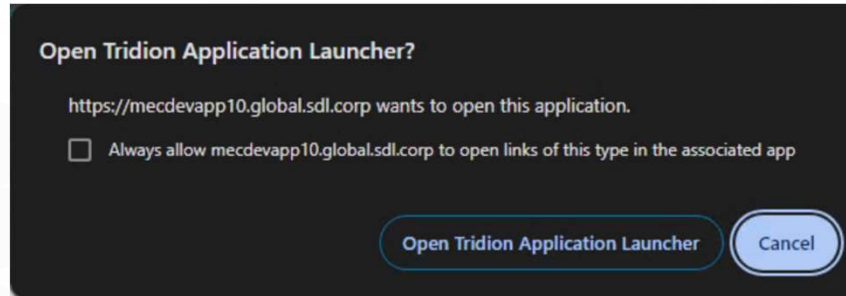

Open in Publication Manager - Prerequisites

- Publication Manager version 15.1 or higher should be installed
- When client tools are not installed, clicking the action button will not do anything (not even show a message)
- An account should be available in Publication Manager that matches the repository and has Authentication "Access Management"
 - If not, you might need to recreate the account as advised when upgrading to Tridion Docs 15 with Modern Authentication

Open in Publication Manager – Intermediate dialogs

- Some intermediate dialogs and a login screen might be shown before Publication Manager is opened

3 months agoMore

This feature will be available as part of Client Tools offering in the context of Tridion Docs 15.1 release

+53

Enable a right-click > “Where used” menu item on all XML objects

Proposed change to Browse Repository:

- (topics, images, maps). For efficient reuse and to ensure good and timely communication among reusers of an object, it is easiest for writers to see where an object is re-used and/or linked directly in the Repository.
- Ideally the right-click menu would contain one choice for “where referenced” and another choice for “where conref’d”/“where reused” to clarify the relationship and also allow for the separate xref and conref troubleshooting strategies.

Delete plugins similar to Write plugins

Proposed interface:

Current access model allows read or write access only on the folders. Child folders get the same access similar to the parent folder. In this way, we do not have the complete control on the child folder’s objects like graphics or topics. If we have the Delete plugins with the help of metadata on the items, delete action can be controlled more precisely.

Thank you for contributing your ideas. We’ve integrated the language field into the “Used by” tab within the Where Used section, making it more convenient for you to identify the different languages in the list view. This enhancement will be included in the upcoming 15.1 release of Tridion Docs.

+3

TD15: Where Used: Show language in the Search result

The use case is I used the **Where used** feature for a topic that appears in a bookmap that has been translated from English into Chinese and Japanese. The bookmap appears three times in the **Where used** results without any differentiation for the languages as shown in the screen shot below (English, Chinese, and Japanese). I must click the preview feature for each bookmap to determine the language. If an object has been translated into another language, it would be helpful to show the language so that the results can be easily differentiated.

TD 15: Add the Preview functionality for publications displayed in the Where used panel in Organize Space

We realize that currently only objects have the preview functionality in the **Where used** panel in Organize Space. It would be helpful if the preview functionality was also available to publications from the **Where used** panel in Organized Space.
