MultiTrans 7 Patch 7.0.20043.2 – 7.0.20051.1

New Features (MultiTrans)

1. (48142) Strict password requirements can be detailed by administrators including:
 - Minimum number of uppercase and lowercase characters
 - Minimum number of numeric characters
 - Minimum number of non-alpha-numeric charactersNewly set rules apply when new users are created or users change their passwords.
2. (48143) English and French dictionary words can be disallowed as passwords.
3. (48144) Due to the variety of possible password rules, when changing a password from anywhere within the MultiTrans software suite, the user is presented with a checklist that displays the rules the password must follow. As each rule is satisfied, the rules will be marked as satisfied in the checklist display.
4. (49546) Encryption of passwords stored on disk has been strengthened to SHA256.

New Features (SDL MultiTrans Plug-In for SDL Trados Studio)

1. MultiTrans TextBases, Team Server TMs and TermBases can be added or removed independently, as Trados Studio [Translation and Terminology Providers](#), from projects received through the MultiTrans workflow. New settings windows are available for each.
2. Independent plug-ins are available from the [SDL AppStore](#) for those requiring the full MultiTrans integration and for those who require only the MultiTrans [Translation and Terminology Providers](#).
3. Terminology Verification, with specific settings, is available using MultiTrans TermBases.
4. Concordance searching can be performed with selected MultiTrans TextBases and Team Server TMs.
5. (51561) TextBase, Team Server and TermBase results can be retrieved from [SDL Trados Studio](#) for MultiTrans custom languages.
6. The connection between MultiTrans and Trados Studio has been optimized, ensuring only one connection is made for each document instance and persisted for the duration of time that the document is open in the Trados Studio editor.

Notes

Due to the nature of the changes in this release, a patch is not available (a full installation must be done). With the strengthened MultiTrans password encryption, the SDL MultiTrans Plug-In for SDL Trados Studio must be updated in parallel if it is being used.

About SDL

SDL (LSE: SDL) is the global innovator in language translation technology, services and content management. For more than 20 years, SDL has transformed business results by enabling nuanced digital experiences with customers across the globe so they can create personalized connections anywhere and on any device.
