Contenta and Contenta S1000D v5.12.1 Released.

31 October 2023

Contenta and Contenta S1000D v5.12.1

We're pleased to announce that Contenta and Contenta S1000D 5.12.1 are now available for download, and a corresponding patch for LiveContent S1000D 5.12.1 is also available on request from Customer Support.

We released version 5.12 in 2022, and since then we've been working with you all to understand where we can improve performance and useability. This release embodies several UI improvements, fixes, and performance improvements to enhance your user experience, including enhancements to hot spotting in document preview as well as improvements to both CIR (Common Information Repository) handling and DDN (Data Delivery Note) export click here.

Staying secure is always of upmost priority to our customers, and staying ahead of evolving cyber threats is a constant challenge. We scan and monitor our software for vulnerabilities daily, to make sure that we're delivering a robust and secure system that protects your business. 5.12.1 addresses several vulnerabilities that have arisen since the release of 5.12.

We have also taken the opportunity to upgrade our platform support e.g., 5.12.1 adds support of Linux 9. Please review our platform changes for the full list of supported Operating Systems and OEM software.

You can find the current release status here: Current Product Version Release Status, along with a list of issues that this release addresses.

Following the release of v5.12.1 we will continue to support the same previous releases of the Contenta suite as before, but we strongly encourage you to upgrade to the latest version release so that you can benefit from the enhanced features, performance, and security it provides.

To initiate the ordering and delivery of any software upgrade, please open a support ticket through the RWS Customer Support Web Portal

If you have any questions concerning this announcement, please contact Customer Support.
