About SDL	7

MultiTrans 7 Patch 7.0.20283.3 – 7.0.20358.1

New Features

1. (59529) Custom document transformation Flow Machine Tasks can be configured, allowing the automation of any compatible third-party service via configuration. Create a Flow Machine Task that sends a document to a service and retrieves an updated document from that service and use that automated task within any workflow. The new [Custom Flow Machine Tasks](#) access right is required to see this area.
2. (60041) PDF quotations generated outside MultiTrans can be uploaded to projects in Flow. MultiTrans will not review, validate or report on the contents of the PDF files however this allows the storage, sending, tracking, voiding and auditing of any quote within MultiTrans.
3. (59408) The TermBase Agent is available in the new Beta MultiTrans Word Add-in.
4. (53515) The TextBase Agent and TermBase Agent apply only to the selected block of text where applicable in the new Beta MultiTrans Word Add-in.
5. (60880) An upperBand parameter has been added to the units in the getProjectDetails REST API response. This returns the high end of the unit matching band, except for No matches which returns the value directly below the lowest fuzzy lowerBand.
6. (59243) Direct links to various areas of the [MultiTrans Community](#) are available from Flow.
7. (60622, 60623) Some configuration changes have been made to Flow's web.config to enhance security.

Program Updates

8. (58928) Several obsolete settings have been removed from Flow. Please see Appendix 1 for details.
9. (59945) The link from Flow to Find has been removed, allowing the continued upgrade of Flow without affecting a current installation of Find.
10. (58557) The TAUS Data Association (TDA) plug-in has been removed from the MultiTrans desktop client following [TAUS's announcement](#) that the data cloud is being retired.
11. (58642) The MultiTrans Web can be accessed without a login for Active Directory single sign-on users.
12. (60596) If the MultiTrans Web is unable to communicate with Active Directory when connected, users are presented the standard login page.
13. (59406) TextBase languages display in the MultiTrans Web for users with Shared Profiles.
14. (59677) The [Created Date](#) and [Modified Date](#) are correct when Office or bilingual documents are added to TextBases.
15. (61246) Merged segments remain intact when closing XLIFF files.
16. (61442) Multiple merges can be done in XLIFF files without saving in between.
17. (53430) Bookmark hyperlink styles and inline styles are preserved on export from the XLIFF Editor.
18. (55250) Word documents can be opened correctly after using duplicating individual segments in the XLIFF Editor.
19. (58959) All translatable content in Word textboxes is exported to XLIFF for translation.

20. (59264) Office documents with complex field characters can be translated correctly in XLIFF format.
21. (60137) The Web Editor spellchecker detects errors in formatted text.
22. (54841) Deselecting [Match full paragraphs](#) allows the return of individual segments in the Web Editor.
23. (58978) Tags are inserted automatically where applicable in the Web Editor when using the Translation Agent.
24. (59036) Text between double curly brackets in Word documents is extracted for translation.
25. (59037) Text between triple curly brackets in IDML is extracted for translation.
26. (53790) Dynamic workflow templates can be applied regardless of the number of source documents in a project.
27. (54951) A project source document can be deleted when it shares a final workflow step with other documents.
28. (47068) Project-specific pre-translation settings are preserved when other project metadata is changed.
29. (58553) [Update TextBase](#) can be deselected in a project template.
30. (58812) The proper time lapse is displayed in the [My Recent Activity](#) section of the Project Manager dashboard.
31. (61001) The month selections in the Project Manager Portal advanced search display side by side when selecting a date range.
32. (61002) At least one criterion must be selected to use the Project Manager Portal advanced search.
33. (61138) The non-selectable [Time](#) field is not displayed in the Project Manager Portal advanced search.
34. (61170) Project Managers can scroll through multiple pages of search results with no errors.
35. (60581) Project Managers can find customers with no business units when searching by customer number.
36. (60961) Unit groups can be selected when initially creating a new unit in the Project Manager Portal [List Administration](#) settings.
37. (60578) Duplicate teams are not created when refreshing the page while creating a Contact Team from the Project Manager Portal.
38. (60139) Workflow tasks are not duplicated when adding a new target language to a project for which a workflow has already been assigned to the original target language.
39. (58304) The machine translation connector to MT Edge and MT Cloud times out correctly when unsupported language combinations are configured.
40. (58591) The character limits for Direct Text Translation from the Customer Portal are enforced.
41. (60499) The difference between the server and end user time zones are considered when calculating whether the due date and time for a project submitted through the Customer Portal is in the future.
42. (59522) Customer contacts can enter a delivery time when [Allow input of hours for Target Date in PCF](#) is active.
43. (61437) The [Projects List](#) can be exported from the Customer Portal.
44. (58840) Files of size 0 (empty files) cannot be added to projects either via drag and drop or by browsing.
45. (60609) Project dates are saved correctly immediately after a customer contact changes their date format.
46. A variety of usability issues related to the initial release of the Beta MultiTrans Word Add-in have been corrected.
47. (60496, 60497) Email subject lines are correct for Spanish notifications.

48. (60537) List of choice fields with a single selection are populated automatically when creating projects through the Customer Portal.
49. (60682) The lowerBand value for Fuzzy Repetitions in the REST API's getProjectDetails response is 0.
50. (59248) Users are prevented from entering invalid Bill(h) and Pay(h) values.
51. (60962) Users can enter Bill(h) and Pay(h) values while adding services to an in-progress workflow.
52. (60794) The weighted word count is updated correctly when users manually update **To Be Done** units for **Language=ALL**.
53. (58686) The invoice total value for uploaded invoices is used in projects' **Profit/Loss** and reports.
54. (59429) Providers can open tasks they've been granted access to by another provider without errors.
55. (60034) Some unnecessary log file entries have been removed from the MultiTrans Server logs for easier troubleshooting.
56. (59947, 60723, 60873) Some unnecessary log file entries have been removed from the MultiTrans Flow logs for easier troubleshooting.
57. Additional input sanitization has been added to prevent potential SQL and blind SQL injections in various locations of the Project Manager Portal.
58. Additional filtering and encoding have been added to prevent cross-site scripting (XSS) attempts in various locations.
59. (59983) Additional input validation has been added to prevent potential parameter fuzzing.
60. (60506) HSTS is disabled by default for Tomcat, preventing duplication of header values.
61. (59106) Identical messages are displayed regardless of the validity of the username, password or email address when logging into Flow to prevent malicious retrieval of valid login IDs.
62. A variety of WCAG accessibility issues have been corrected, primarily in the Customer Portal.
63. Some French and Spanish localization issues have been corrected.

Note

All contents of *Hotfix 7.0.20283.3_7.0.20315.1*, as detailed in the hotfix release notes available in the [MultiTrans Community](#), are included in this release in addition to the **New Features** and **Program Updates** listed above.

Appendix 1: Settings Removed from MultiTrans Flow

The following settings are no longer in use and have been removed from MultiTrans Flow:

1. System Parameters > General
 - Keep folder hierarchy in project
 - FTP Server name
 - Http Upload Fields QTY
 - Show Billing Account (WA)
 - Activate Echo Options
 - Echo Connection Path
 - Echo External Connection Path
2. System Parameters > Miscellaneous
 - Use Alternate Project List (Possible Values : 0, 1, 2 and 3)
 - Use Alternate Project Quotations List
 - Show management quick navigation
 - Show nb. doc. with workflow in project workflow overview
 - Allow fast status update in Project module
 - Show Workflow Names in Project module
3. System Parameters > Label
 - Entire section removed
4. System Parameters > Licensing
 - Entire section removed
