

The background of the slide is a reproduction of Michelangelo's famous fresco, "The Creation of Adam," from the ceiling of the Sistine Chapel. The central figure, Adam, is reclining on his left side, his body stretched out in a dynamic pose. He has a long, flowing white beard and is wearing a pinkish-purple robe. His right arm is extended, with his index finger pointing towards the right. Surrounding him are several other figures, including a woman with blonde hair and a child, all depicted with the characteristic anatomical detail and expressive style of Michelangelo. The scene is set against a light, aged background with visible cracks and texture.

Tridion Sites Roadmap

Q2 2025

Changes in quarterly update

- 10.1.1 is scheduled for June 2025
- 10.1.2 is scheduled for December 2025
- Both will be available as standalone or as hotfixes (at least that's the plan for now 😊)...so join the customers who are in the process of upgrading to 10.1!
- The travel/leisure/hospitality innovation live series has moved to <https://www.linkedin.com/showcase/rws-tridion/> . Go to the URL and follow the page for updates.

Congratulations to Rabobank!

Rabobank

Sometimes it's hard to keep track of which customer has upgraded first, but it looks like for 10.1, Rabobank is the winner!

Congrats to Rabobank and Trividion who gave them a helping hand.

And thank you Ron for pointing out my earlier error saying that ABN AMRO was the first 🙄

Product Releases

Sites 10.1 Recap

BluePrinting 3.0

“ The changes related to BluePrinting in 10.1 mark the first changes in this area since the possibility of promotion and demotion of items in the BluePrint hierarchy, introduced in Web 8 in 2015. Allowing non-localizable fields will significantly enhance managing content for localized digital experiences. ”

- Ron Grisnich, Trivident (RWS Partner)

BluePrinting for Site and Content Management

Organization

Governance / Workflow
Central Content

Brand

Design

Product

Scheduling

Market

Regional Adaptations
Product Availability

Localization

Translation
Transcreation

...

Thousands of variations can be managed by
BluePrinting without duplication.

"Don't repeat yourself"

DRY Principle

Now with Granular BluePrinting ...!

Field Level Inheritance on both the content and meta data fields

Common use cases:

- Lock down immutable information like product SKUs
- Mesh HQ specific and Brand specific information in a single component
- Cascade parent changes to children
- Simplify content model and remove work arounds

Also applies to Pages and Regions!

And don't worry...your existing schemas will continue to work as is!

BluePrinting 3.0

- Granular BluePrinting:
 - Region
 - Page
 - Component
- Promote / Demote in new UI. Important feature because it makes it easier for innovations lower level regional innovations to be rolled up into the parent organization.
- Easier UI for choosing to localize items in child folder.

Benefits of Granular BluePrinting

- Much better control and governance
 - Vast improvement over current
 - Can eliminate processes and workarounds
- Auto cascade of the parent field to the child components
- Can allow a much more efficient content model
 - Will allow for a consolidation of multiple components into a single one

Translator Context View

Translator Context View

Solution to provide translators with a way to see the site context

Feature 1: Direct Links to Preview site for Translators

The screenshot displays the Trados Online Editor interface. The top bar shows the project name 'preview_url_example.its' and buttons for 'Accept task' and 'Download translated file'. The main workspace is divided into a left sidebar with navigation and view options, a central translation table, and a right sidebar titled 'Tridion TranslationManager preview urls'.

Navigation and View Options:

- Home, Review, View (selected)
- Layout: Vertical, Horizontal
- Navigation: Show Navigation, Show Document Structure
- Adapt Colors
- Fonts: Enable Text Zoom, Larger, Smaller
- Tags: Show Formatting Tags, Show Tag Details
- Lookups: Filter Lookups, Alternative view
- Theme: Light
- Preview, Settings

Translation Table:

	Source Text	Target Text	MT	MT

Focus but don't select first item

When browsing an organizational item, the first item in the list was automatically focused and selected.

We updated this behavior to focus but not select the first item.

This will reduce the likelihood that users unintentionally perform actions on the first item (see [SRQ-25640](#)).

This screenshot shows the 'Content' interface with a table of items. The first item, '_Cloneable C...', is highlighted with a green background and has a checked checkbox in the first column. The interface includes a search bar, a toolbar with icons, and filter buttons for Schema, Shared from, Status, and Type. The table has columns for NAME, STATUS, SCHEMA, SHARED FROM, APPROVAL STATUS, DATE CREATED, LOCALE, DATE MODIFIED, and LOCKED BY.

	NAME	STATUS	SCHEMA	SHARED FROM	APPROVAL STATUS	DATE CREATED	LOCALE	DATE MODIFIED	LOCKED BY
<input checked="" type="checkbox"/>	_Cloneable C...			(Local copy)		8/1/2024 10:57 A...	en-AU	8/1/2024 10:57 A...	
<input type="checkbox"/>	_Structure			(Local copy)		7/22/2024 2:05 PM	en-AU	7/22/2024 2:05 PM	
<input type="checkbox"/>	About			200 Example Content		7/10/2024 11:17 ...	en-AU	7/10/2024 11:17 ...	

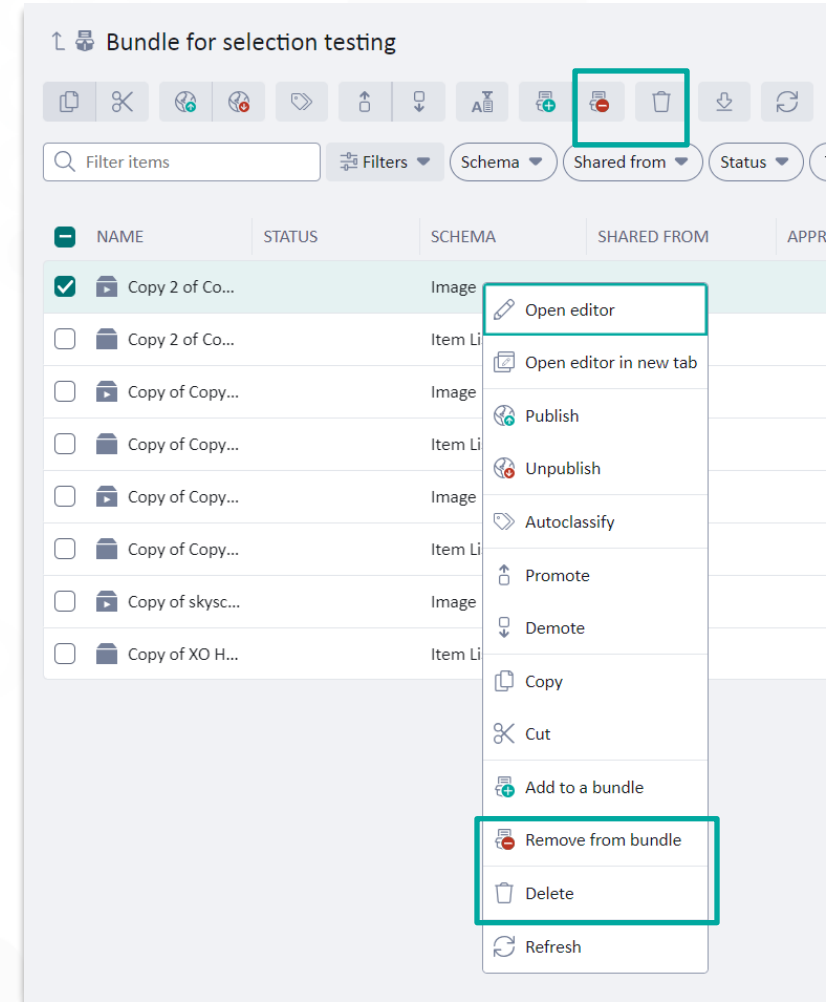

This screenshot shows the same 'Content' interface, but the first item, '_Cloneable C...', is now highlighted with a green background and has an unchecked checkbox in the first column. The rest of the interface, including the search bar, toolbar, and filter buttons, remains the same.

	NAME	STATUS	SCHEMA	SHARED FROM	APPROVAL STATUS	DATE CREATED	LOCALE	DATE MODIFIED	LOCKED BY
<input type="checkbox"/>	_Cloneable C...			(Local copy)		8/1/2024 10:57 A...	en-AU	8/1/2024 10:57 A...	
<input type="checkbox"/>	_Structure			(Local copy)		7/22/2024 2:05 PM	en-AU	7/22/2024 2:05 PM	
<input type="checkbox"/>	About			200 Example Content		7/10/2024 11:17 ...	en-AU	7/10/2024 11:17 ...	

The delete action is now available in bundles and search folders

Introduced a new icon for the Remove from bundle action.

Now displaying the delete action when inside a bundle or search folder.

Copy/paste fix

Copy/paste behavior is now aligned with the behavior in Classic UI and Windows Explorer.

When pasting into a folder (or other container item) via the context menu, the item(s) will be pasted inside the folder.

Previously, the items would be pasted at the same level as the folder.

This change applies to both the tree and the table.

Filter out non-applicable activities

The screenshot displays the Tridion Sites interface with a list of workflow activities. A modal dialog titled "Finish activity" is open, prompting the user to select the next activity from a dropdown menu. The dropdown shows "Accept" and "Reject" options. The background shows a table of activities with columns for Activity Definition, Date Assigned, Assigned To, Publication, Performer, Primary Item, Date Started, Status, and Name. The status of the activities varies, including "IN PROGRESS" and "ASSIGNED".

On the right side, a network request log is visible, showing a request to the URL `tcm:12-1190-131104`. The request is a POST method with a payload containing a "DELETE" action. The response is a JSON object with a "NextActivityDefinitions" array, which includes a link to the "Accept" activity.

The "Finish activity" dialog has the following fields:

- Activity: 3. Translation Review
- Next activity: Select the next activity (dropdown menu)
- Accept (button)
- Reject (button)
- Comment (text area)
- Finish (button)
- Cancel (button)

The network request log shows the following details:

- Name: tcm:12-1190-131104?useDynamicVersion=f...
- Method: POST
- Headers: Content-Type: application/json
- Payload: {"type": "DELETE", "href": "http://10.100.92.199:81/ui/api/v3.0/items/tcm:12-61-131088", "rel": "tcm:edit", "type": "PUT"}

CoreService REST Get items improvements

Added additional filter options

- ***rloItemTypes*** filters by item type
- ***recursive***, set to ***true*** returns items from all levels of the nested organizational items
- ***details***, controls the details level such as ***Contentless***, ***IdAndTitle***, ***WithApplicableActions*** must be returned for each item

GET /api/v3.0/items/{escapedContainerId}/items Gets a list of items inside a specified container item (Publication or Organizational Item). ^

Name	Description
escapedContainerId * required string (path)	The TCM URI or ECL URI of a container item: either a Publication or an Organizational Item such as a Bundle, Category, External Container, Folder or Structure Group. Escape the colon by replacing it with an underscore. For example: "tcm_0-1-1". <input type="text" value="escapedContainerId"/>
useDynamicVersion boolean (query)	Loads a dynamic version (if available for the current user) <input type="text" value="false"/>
rloItemTypes array[string] (query)	The item types of all repository-local objects that you want to include in the response. <input type="text" value="Page, PageTemplate, TargetGroup, Category, Keyword"/>
recursive boolean (query)	If false, only items directly inside the given container are returned. If true, items in nested Organizational Items (recursively) are also returned. For External Containers this parameter is ignored. External Content Library does not support recursive lists. <input type="text" value="false"/>
details string (query)	Specifies the level of details of list entries. <input type="text" value="Contentless"/>

Additional Items (also available as hotfixes for 10)

- Display a notification if there's an error when attempting to publish an item
- Misc UI
 - Various improvements to component template selection
 - Differentiate activity filter options by including the publication
 - Focus but don't select the first item in the table/grid on browse
 - Add delete action for items in bundles and search folders
- Pasting via the context menu on a container should paste inside the container
- Improved stability of rich text editor when running extensions
- Filter out non-applicable next activities in translation workflows
- Allow users to select the assignee for the next activity

10.1 Platform Updates

Content Manager

- ✓ Support of TLS 1.3
- ✓ Java 21 support
- Tridion Search Upgrade – work in progress
 - SOLR to v 9.6
 - Apache Tomcat to v 9

Content Delivery

- Java 21 LTS
- Spring 6
- SpringBoot 3
- Hibernate 6
- Tomcat 10
- Jakarta namespace switch

Long-Term Support for 10.1

Moving to .NET 8 required some significant code changes and therefore we have decided not to backport those changes to 10.0. Instead those changes are going to be rolled in 10.1 where we will be able to do more exhaustive testing than with a backport hotfix.

But to help our customers with their planning, we have decided to make 10.1 into a Long-Term Support release.

Note that 10.0 LTS customers can still stay on the older versions of .NET if they need more time before upgrading to 10.1.

Sites 10.1.1

Coming June 2025!

Experience Space Search

New Advanced Search feature

Parity with Classic UI supporting:

- ✓ Searching in all content (everywhere) or limit to item names or descriptions only
- ✓ Search within a certain context (folder) with or without including subfolders
- ✓ Filter search results by using same filter options as provided in Classic UI
- ✓ Option to save your search query and reset

Experience Space Search

Extras in Experience Space:

- Columns:
 - Re-ordering (drag and drop)
 - Additional sort options
 - Change visible columns per user via Column configurator
 - Settings saved
 - Reset to default
- Export

Sites 10.1.2

Coming December 2025!

Features in 10.1.2

Main theme is Translation updates in Experience Space

- New Experience Space Translation Queue
- Create Translation Jobs but “Save for Later”

...and stay tuned for more info on 10.1.2 in the coming months!

Platform Upgrade Considerations

Upgrade overview

The updated documentation is not yet available for Sites 10.1 but the process will largely be the same:

<https://docs.rws.com/1099765/100494/tridion-sites-10-main-documentation/upgrading-----tridion-sites>

The 2 most common upgrade types are Staged and Rolling

The most important consideration is that if you wish to do a rolling upgrade it is always from the immediately preceding version. So for a rolling upgrade, you will have to go from **Sites 10 --> Sites 10.1**

Upgrade paths – Staged Upgrade

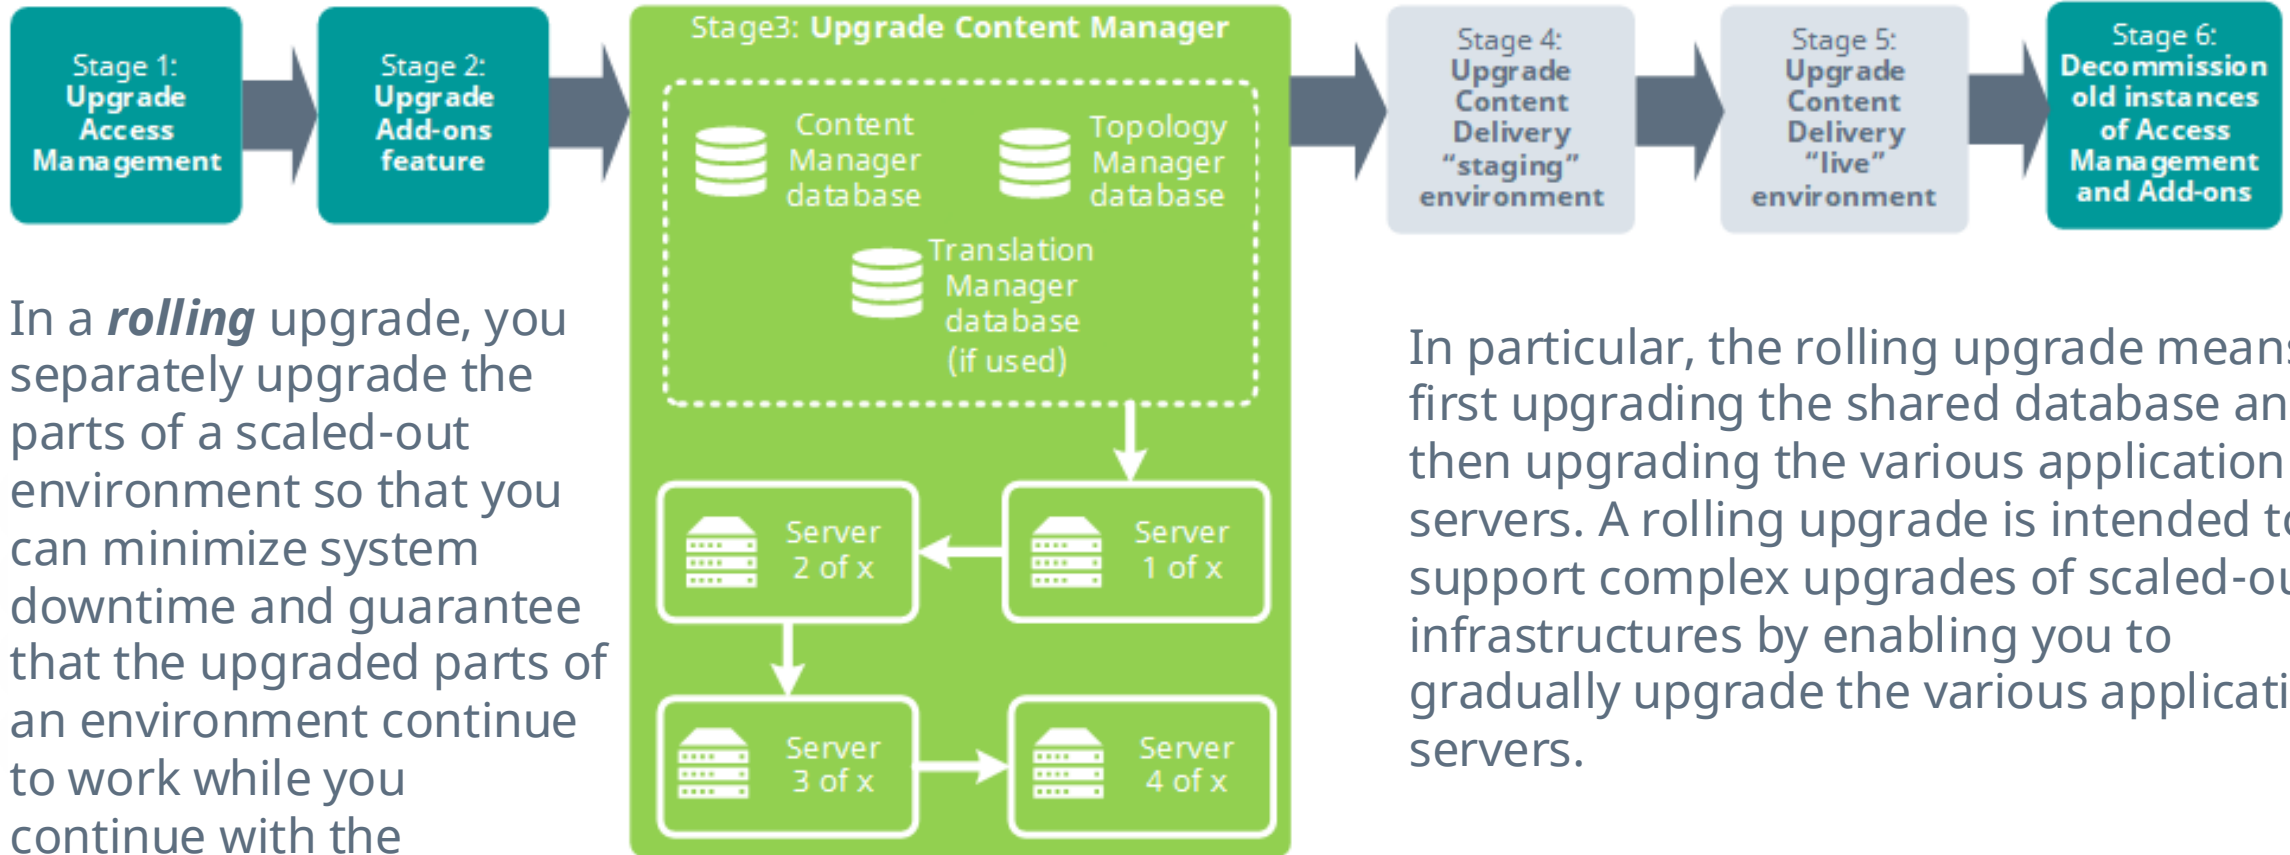

A ***staged*** upgrade is where you upgrade the different parts of your infrastructure at different times.

In a staged upgrade, you must upgrade Content Manager environment before you upgrade your Content Delivery environments.

After that, you can upgrade the individual Content Delivery environments in any order you wish.

Most organizations upgrade the product using a staged upgrade.

Upgrade paths – Rolling upgrade

In a **rolling** upgrade, you separately upgrade the parts of a scaled-out environment so that you can minimize system downtime and guarantee that the upgraded parts of an environment continue to work while you continue with the upgrade.

In particular, the rolling upgrade means first upgrading the shared database and then upgrading the various application servers. A rolling upgrade is intended to support complex upgrades of scaled-out infrastructures by enabling you to gradually upgrade the various application servers.

Upgrade Considerations

Dynamic Experience Accelerator (DXA) Customers

For customers that are using the reference delivery application (DXA) there are some considerations:

- Sites 10 and Sites 10.1 require DXA 2.3
- Recommendation is to upgrade DXA 2.3 first and then update Content Management and then Content Delivery
- DXA 2.3 is backwards compatible with 9.1 and above
- Code:
 - <https://github.com/RWS/dxa-web-application-dotnet>
 - <https://github.com/RWS/dxa-web-application-java>

Move to Experience Space

In Sites 9.5, we introduced a brand new visual interface for content authors called, **Experience Space**. The old **Classic UI** is still available but we recommend that customers consider moving users to the new visual interface. It provides a modern editing experience and new features are being release only in **Experience Space**.

One factor to consider is that some customers have GUI extensions on the **Classic UI**. Our recommendation is to analyze:

1. Which extensions are no longer needed because the feature is supported natively
2. Which extensions are rarely used and can continue to live in the **Classic UI**
3. Which extensions should be migrated to **Experience Space** using the Extensions Framework that was introduced in Sites 10.

Streamlining the Content Model with BluePrinting 3.0

One consideration after your platform has been upgraded to Sites 10.1 is that BluePrinting 3.0 is going to allow for a far more efficient and simplified content model.

Our recommendation is to upgrade to 10.1 first but then leave some time to analyze which schemas can be streamlined using the new feature.

Our goal is that the conditional inheritance feature of BluePrinting 3.0 will allow for multiple schemas to be consolidated into a single one and will optimize scenarios for components that have both centralized and localized fields.

Moving to Trados Enterprise for Translations

While Tridion Sites 10.1 is still going to support integrations to TMS and WorldServer, we recommend moving to Trados Enterprise. It is a very modern platform that easily incorporates with AI linguistic tools like RWS Language Weaver.

Moving forward new features are going to be developed on Trados Enterprise so we recommend that customers start to make the move to the platforms. Some benefits of making the move:

1. Trados Enterprise has many **more features** for both translators and managers.
2. Trados Enterprise can better take advantage of machine translation (with or without human post-edit) to **lower translation costs**.
3. Trados Enterprise with the new Evolve capability can increase the **translation quality** by using AI tools.

Going Headless

Although Tridion has had a headless content hub since 9.0, it was really with the 9.6 release which introduced Semantic Content Models and Template-less Publishing that paved the way for a new and simpler way to work with Tridion's JSON output and the JavaScript frameworks like React, Vue, and Angular.

To go headless, customer will need to install the Dynamic Experience Delivery (DXD) content hub and then ensure that schema fields are set to publishable.

Access Management

If your organization has not yet migrated to the Access Management platform, you may consider doing so as part of the upgrade. This will allow you to take advantage of the new features allowing you to connect to various Identity Providers and better manage security across your Tridion Sites eco-system.

Documentation on how to proceed here:

<https://docs.rws.com/1099765/805637/tridion-sites-10-main-documentation/migrating-security-to-----tridion-access-management-during-an-upgrade>

Integration Framework and Extensions

The Integration Framework was released in Tridion Sites 9.1 and the Extension Framework was released in 10. One of Tridion's key benefits is that it is a platform that can be extended to provide a unique solution for your organization.

As part of the upgrade we recommend taking a look to see if there is any "low-hanging fruit" that could be integrated into the platform.

Professional Services

Additional Professional Services for Sites 10.1

As part of the Tridion Sites 10.1 offering we are pleased to introduced an expanded set of solutions from our worldwide team.

Customers can now use our Professional Services for technology adjacent solutions.

Tridion Sites on AWS Marketplace

The screenshot shows the AWS Marketplace interface for the product 'Tridion Sites'. At the top, the 'aws marketplace' logo is on the left, a search bar is in the center, and 'Sign in or Create a new account' is on the right. Below the header is a navigation bar with links: 'About', 'Categories', 'Delivery Methods', 'Solutions', 'AWS IQ', 'Resources', and 'Your Saved List'. The main content area features the 'RWS' logo, the product name 'Tridion Sites', and the seller 'RWS Holdings Plc'. A description reads 'Tridion Sites - Web CMS with embedded translation'. Two buttons are visible: 'View purchase options' (orange) and 'Save to list' (blue). At the bottom, a horizontal menu contains tabs for 'Overview', 'Pricing', 'Usage', 'Support', and 'Reviews', with 'Overview' being the active tab.

Product Overview

Tridion Sites is a state-of-the-art web CMS that allows you to manage and deliver superb digital experiences across multiple channels - using traditional or headless (GraphQL) publishing.

You can start with a single language and single website and then scale as your business grows - adding more websites and languages as needed. This way you can easily and cost-effectively provide customers with content in their own language, choosing from a spectrum of options: machine translation, human-in-the-loop or fully expert translation

Highlights

- Translation integration - stop copying and pasting content into emails to send it off for translation. Tridion has it all integrated, making it really easy to create local country sites.
- The best of both worlds: publish content to any
