

**Tridion Sites
2025 Q4
Roadmap**

Changes in quarterly update

- 10.1.2 is still scheduled for December 2025 - available as standalone or as a hotfix
- 10.5 (scheduled 2026) has a new video illustrating how you can use a Model Context Protocol (MCP) Server in conjunction with Tridion Sites to greatly simplify multiple actions. This is going to be a key feature of the 10.5. release

Tridion Sites Product Releases

01.

Product Releases

Recap of 10.1

- Granular BluePrinting
- Translator Context View

02.

Benefits of Granular BluePrinting

Much better control and governance

Vast improvement over current

Can eliminate processes and workarounds

Auto cascade of the parent field to the child components

Easier make content changes at scale

Can allow a much more efficient content model

Will allow for a consolidation of multiple components into a single one

“The changes related to BluePrinting in 10.1 mark the first changes in this area since the possibility of promotion and demotion of items in the BluePrint hierarchy, introduced in Web 8 in 2015. Allowing non-localizable fields will significantly enhance managing content for localized digital experiences.”

– Ron Grisnich, Trident (RWS Partner)

BluePrinting for Site and Content Management

Organization
Governance / Workflow
Central Content

Brand
Design

Product
Scheduling

Market
Regional Adaptations
Product Availability

Localization
Translation
Transcreation

Thousands of variations can be managed by BluePrinting without duplication.

"Don't repeat yourself"
DRY Principle

Now with Granular BluePrinting ...!

Field Level Inheritance on both the content and meta data fields

Common use cases:

- Lock down immutable information like product SKUs
- Mesh HQ specific and Brand specific information in a single component
- Cascade parent changes to children
- Simplify content model and remove work arounds

Also applies to Pages and Regions!

And don't worry...your existing schemas will continue to work as is!

Feature 2: PDF/Image Attachments for Translators

The screenshot shows the Trados web interface. The top navigation bar includes 'Trados' and menu items: 'Dashboard', 'Inbox', 'Projects', 'Resources', 'Customers', 'Vendors', 'Users', and 'Terminology'. Below this, the 'Projects' section is active, showing 'Project Groups'. The main content area is titled '< PDF Example for 10.1' and has sub-tabs: 'Dashboard', 'Stages', 'Workflow', 'Reports', 'Costs', 'Files', 'Task History', 'Notes', 'Conversations', and 'Settings'. The 'Files' tab is selected, displaying a table of files with the following columns: FILE NAME, FILE PATH, LANGUAGE, TYPE, ROLE, WORDS, and TASK. A 'Filter' button is on the left. The table contains four rows:

FILE NAME	FILE PATH	LANGUAGE	TYPE	ROLE	WORDS	TASK

Additional
10.1 Features

Component template field updates

Increased field width and sorting templates alphabetically

Differentiate activity filter options

The publication title has been included to differentiate the filter options for:

- activity definition,
- process,
- process definition.

The image displays two screenshots of the Tridion Sites interface, illustrating the workflow activity filter options. The top navigation bar includes 'Content', 'Activities', and 'Publishing'. The user 'Nick Hill' is logged in.

Left Screenshot: Shows the 'Workflow Activities' list with a search bar and filter options. The 'Filters' dropdown is open, showing 'Activity definition' selected. The filter list includes 'Approve' (checked) and 'Clear filter'.

ACTIVITY DEFINITION	DATE ASSIGNED	ASSIGNED TO	PUBLICATION

Focus but don't select first item

When browsing an organizational item, the first item in the list was automatically focused and selected.

We updated this behavior to focus but not select the first item.

This will reduce the likelihood that users unintentionally perform actions on the first item (see [SRQ-25640](#)).

The screenshot shows a content management interface for a folder named "Content". At the top right, there is a search bar labeled "Search Content" and a "+ Add new" button. Below the search bar is a row of icons for various actions. A "Filter items" search box is followed by several filter buttons: "Filters", "Schema", "Shared from", "Status", and "Type". To the right of these filters is a "Sort by" dropdown menu set to "(None)".

<input checked="" type="checkbox"/>	NAME	STATUS	SCHEMA	SHARED FROM	APPROVAL STATUS	DATE CREATED	LOCALE	DATE MODIFIED	LOCKED BY
<input checked="" type="checkbox"/>	_Cloneable C...			(Local copy)		8/1/2024 10:57 A...	en-AU	8/1/2024 10:57 A...	
<input type="checkbox"/>	_Structure			(Local copy)		7/22/2024 2:05 PM	en-AU	7/22/2024 2:05 PM	
<input type="checkbox"/>	About			200 Example Content		7/10/2024 11:17 ...	en-AU	7/10/2024 11:17 ...	

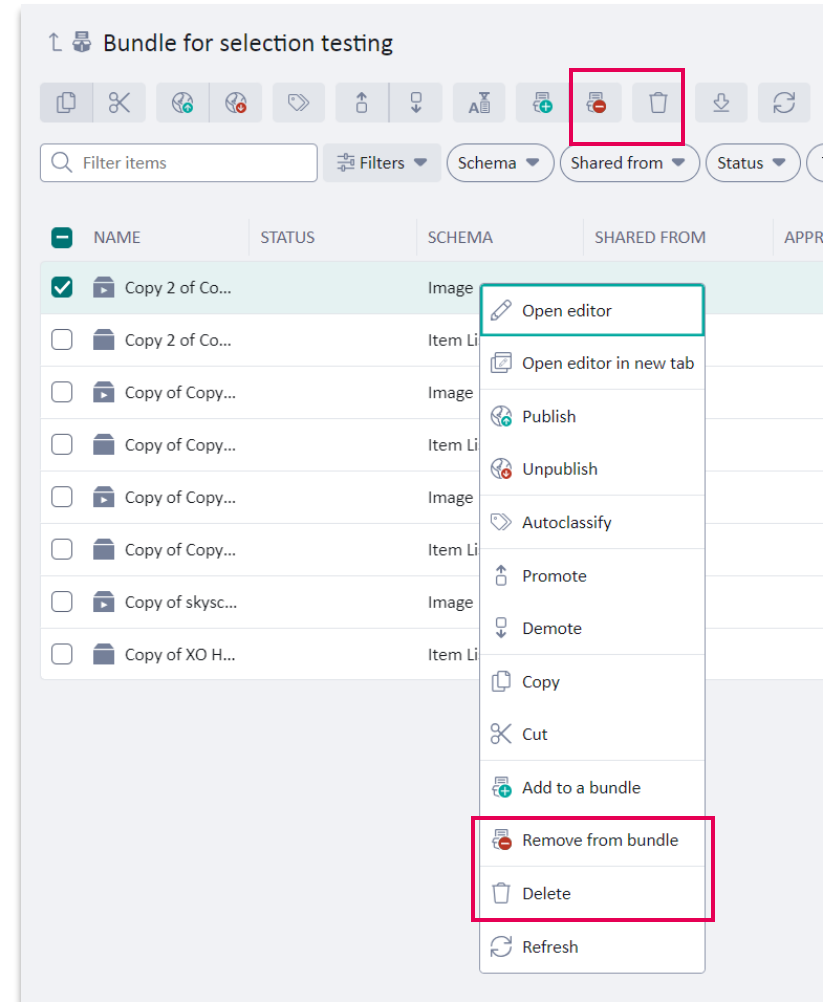

This screenshot shows the same content management interface as above, but with the first item, "_Cloneable C...", focused (highlighted in light blue) and its selection checkbox unchecked. The rest of the interface, including the search bar, filters, and table headers, remains identical.

<input type="checkbox"/>	NAME	STATUS	SCHEMA	SHARED FROM	APPROVAL STATUS	DATE CREATED	LOCALE	DATE MODIFIED	LOCKED BY
<input type="checkbox"/>	_Cloneable C...			(Local copy)		8/1/2024 10:57 A...	en-AU	8/1/2024 10:57 A...	
<input type="checkbox"/>	_Structure			(Local copy)		7/22/2024 2:05 PM	en-AU	7/22/2024 2:05 PM	
<input type="checkbox"/>	About			200 Example Content		7/10/2024 11:17 ...	en-AU	7/10/2024 11:17 ...	

The delete action is now available in bundles and search folders

Introduced a new icon for the Remove from bundle action.

Now displaying the delete action when inside a bundle or search folder.

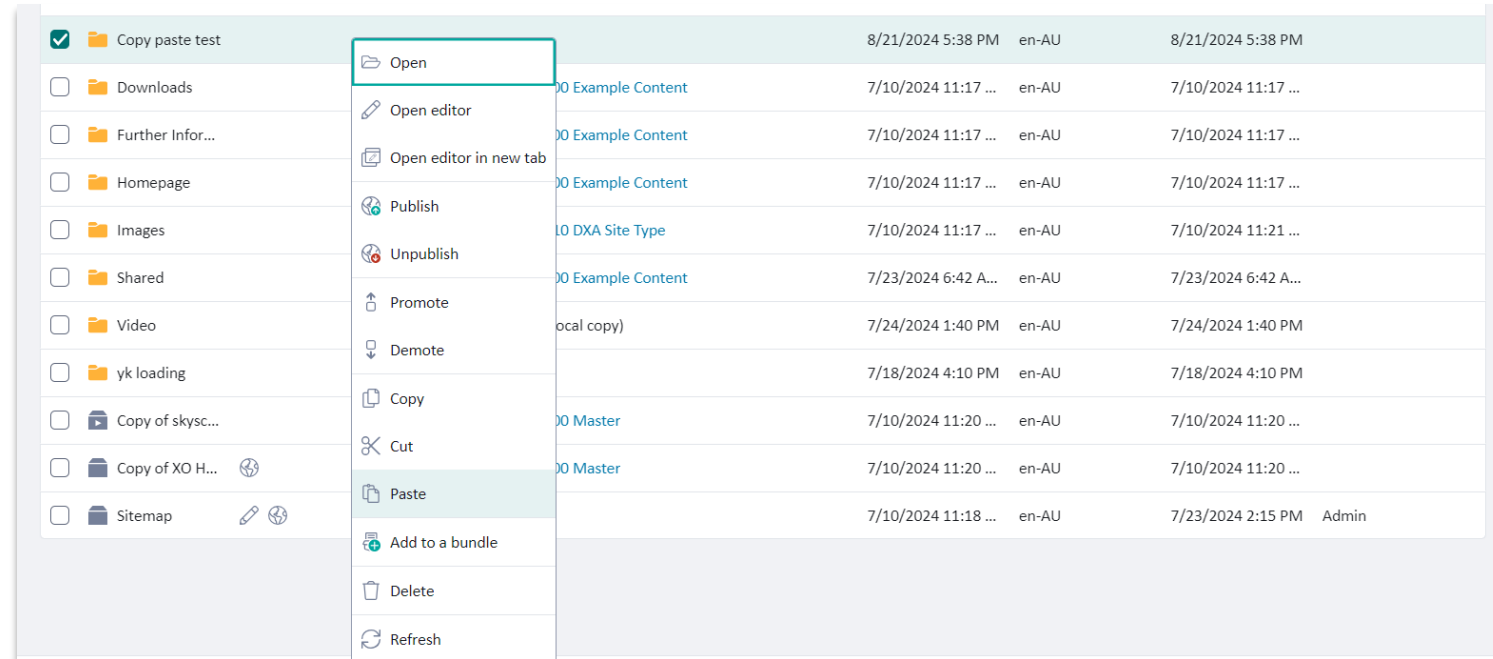

Copy/paste fix

Copy/paste behavior is now aligned with the behavior in Classic UI and Windows Explorer.

When pasting into a folder (or other container item) via the context menu, the item(s) will be pasted inside the folder.

Previously, the items would be pasted at the same level as the folder.

This change applies to both the tree and the table.

Filter out non-applicable activities

The screenshot displays the Tridion Sites interface with a list of workflow activities. A 'Finish activity' dialog is open, allowing the user to select the next activity. The network inspector on the right shows a REST API response with a 'NextActivityDefinitions' array containing 'Accept', 'Obsolete', and 'Reject' options.

CoreService REST Get items improvements

Added additional filter options
rlolItemTypes filters by item type
recursive, set to *true* returns items from all levels of the nested organizational items
details, controls the details level such as *Contentless*, *IdAndTitle*, *WithApplicableActions* must be returned for each item

GET /api/v3.0/items/{escapedContainerId}/items Gets a list of items inside a specified container item (Publication or Organizational Item) ^

Name	Description
escapedContainerId * required string (path)	The TCM URI or ECL URI of a container item: either a Publication or an Organizational Item such as a Bundle, Category, External Container, Folder or Structure Group. Escape the colon by replacing it with an underscore. For example: "tcm_0-1-1".
useDynamicVersion boolean (query)	Loads a dynamic version (if available for the current user)
rlolItemTypes array[string] (query)	The item types of all repository-local objects that you want to include in the response.
recursive boolean (query)	If false, only items directly inside the given container are returned. If true, items in nested Organizational Items (recursively) are also returned. For External Containers this parameter is ignored. External Content Library does not support recursive lists.
details string (query)	Specifies the level of details of list entries.

escapedContainerId

false

Page
PageTemplate
TargetGroup
Category
Keyword

false

Contentless

Additional Items (also available as hotfixes for 10)

- Display a notification if there's an error when attempting to publish an item
- Miscellaneous UI
 - Various improvements to component template selection
 - Differentiate activity filter options by including the publication
 - Focus but don't select the first item in the table/grid on browse
 - Add delete action for items in bundles and search folders
- Pasting via the context menu on a container should paste inside the container
- Improved stability of rich text editor when running extensions
- Filter out non-applicable next activities in translation workflows
- Allow users to select the assignee for the next activity

10.1 Platform Updates

Content Manager

- ✓ Support of TLS 1.3
- ✓ Java 21 support
- Tridion Search Upgrade – work in progress
 - SOLR to v 9.6
 - Apache Tomcat to v 9

Content Delivery

- Java 21 LTS
- Spring 6
- SpringBoot 3
- Hibernate 6
- Tomcat 10
- Jakarta namespace switch

Long-Term Support for 10.1

Moving to .NET 8 required some significant code changes and therefore we have decided not to backport those changes to 10.0. Instead those changes are going to be rolled in 10.1 where we will be able to do more exhaustive testing than with a backport hotfix.

But to help our customers with their planning, we have decided to make 10.1 into a Long-Term Support release.

Note that 10.0 LTS customers can still stay on the older versions of .NET if they need more time before upgrading to 10.1.

03.

**Recap of
Tridion Sites 10.1.1
Launched June 4, 2025**

Primary Feature:

- Advanced Search in Experience Space

Experience Space Search

New Advanced Search feature

Parity with Classic UI supporting:

- ✓ Searching in all content (everywhere) or limit to item names or descriptions only
- ✓ Search within a certain context (folder) with or without including subfolders
- ✓ Filter search results by using same filter options as provided in Classic UI
- ✓ Option to save your search query and reset

Experience Space Search

Extras in Experience Space:

Columns:

Re-ordering (drag and drop)

Additional sort options

Change visible columns per user via Column configurator

Settings saved

Reset to default

Export

Experience Space Search

Content Manager << ↑ 100 Master (7)

Experience Space Search

The screenshot displays the Tridion Sites Content Manager interface. On the left is a navigation pane with 'Content Manager' and a search box. Below it are sections for 'Favorites', 'Items in progress', and 'Publications', with a tree view showing various content folders like '100 Master' and '200 Global Content'. The main area shows 'Search results (4)' with a table of items:

NAME	STATUS	SCHEMA	PARENT	MODIFIED
bitcoin		Image	000 Empty	6 May 2019
Homepage Bitcoin		Page	000 Empty	27 Nov 2019
Research about bitcoin		Article	000 Empty	20 Apr 2020
bitcoin		Video	000 Empty	3 Mar 2020

Below the table are filter controls for 'Filter table', 'Filters', 'Status', and 'Schema', along with a 'Sort by' dropdown set to 'None'. On the right, a 'Search' sidebar is open, showing search settings: 'Search in' (100 Master), 'Include subfolders' (checked), 'Search term' (bitcoin), and various search scope options. It also includes fields for 'Author', 'Keywords', 'Publish status', 'BluePrinting', 'Types', 'Based on Schema', 'Workflow', and 'State'. A green 'Apply' button is visible at the top of the sidebar.

Apply the search filters and display results

Save search query to new search folder

Return all filters to default states, but doesn't clear results table

Get user back to search context (100 Master)

04.

Tridion Sites 10.1.2 Coming December, 2025

Primary Features:

- Translations view in Experience Space
- Translation Job improvements
- Workflow Activity Revert
- Custom Defaults
- REST API

Translations view in Experience Space

- ❖ Similar to Activities and Publishing
- ❖ Only appears when Translation Manager is installed
- ❖ Same columns as Classic UI (by default) + "Created by"
- ❖ Optional columns (via configurator)
 - Modified by
 - Date Created
 - Date due
 - Action
- ❖ Filters (Including free text filter)
- ❖ Sort (Including quick sort by clicking on headers)

The screenshot displays the 'Translations' view in Tridion Sites. The interface includes a search bar, filters, and a table of translation jobs. The table has the following columns: NAME, DATE MODIFIED, TYPE, LANGUAGE, PUBLICATION, PROGRESS, STATUS, and CREATED BY. The table contains 20 rows of data, each representing a translation job with various details such as source and target languages, publication names, progress percentages, and status indicators (e.g., DEFINITION, PENDING FOR TRANSLATION, ERROR RETRIEVAL, COMPLETED, CANCELLED).

NAME	DATE MODIFIED	TYPE	LANGUAGE	PUBLICATION	PROGRESS	STATUS	CREATED BY

Translation Job Editor

Updated existing translation job modal dialog to support

- ❖ Creation of jobs in definition state
- ❖ Adding items for translation to an existing job
- ❖ Editing and viewing of existing translation jobs
- ❖ Send items for translation

AG Grid was replaced with our own table to ease development and reduce technical debt.

Still to do

- ❖ Tabs: added items, resolved items and notification

The screenshot shows a 'Translate' modal dialog with two tabs: 'General' and 'Workflow'. The 'General' tab is active. It contains a form for 'Translation job name*' with a text input field containing 'Content'. Below it is a 'Date required' section with a 'Select date' button and a calendar icon. There are three checkboxes: 'Include previously translated items' (unchecked), 'Translate components and keywords' (checked), and 'Translate pages and organizational items' (unchecked). A table with two columns, 'TARGET PUBLICATION' and 'LANGUAGE', is displayed. The table has two rows of data, both with a checkmark in the first column. The first row shows 'Diamond Blueprint - 03 Source-Target B' and 'Dutch (Netherlands)'. The second row shows 'Diamond Blueprint - 03 Source-Target A' and 'French (France)'. At the bottom right, there are three buttons: 'Save', 'Send for translation' (highlighted in green), and 'Cancel'.

"Task Process A" has been successfully reverted.

Custom defaults

Different customers have different requirements when it comes to default dialog values and general UI behavior.

Starting in 10.1.2, admin users will be able to use the Rest API to customize: defaults for the Publish/unpublish dialogs, open behavior for item editors (same versus new tab), whether the link to Classic UI is displayed

In this PI, we've added support for four fields in the publish/unpublish dialogs.

Additional customization options will be added in the upcoming PI and future releases.

Custom defaults

Here's an example configuration showing how to set defaults for the four publish dialog settings currently implemented.

```
{
  "$type": "Settings",
  "Data": {
    "defaults": {
      "publishing": {
        "publishNewContent": false,
        "includeComponentLinks": false,
        "includeItemsInProgress": false,
        "targetTypeIds": [
          "tcm:0-2-65538",
          "tcm:0-2-65538"
        ]
      }
    }
  }
}
```

Note that these defaults always override the user's last selection. We might add an option to allow customers to specify whether these defaults can be overridden.

The background of the slide is a close-up, artistic photograph of numerous red fiber optic cables. The cables are bundled together and fan out, creating a dense, textured pattern of fine lines. The lighting is dramatic, highlighting the individual strands and creating a sense of depth and movement. The overall color palette is a rich, vibrant red.

**Content Manager
REST API
10.1.2 Changes**

Translation Manager resolved items

New endpoints

GET resolved items for existing job

POST resolved items for new (unsaved) job

Processes a list of added items and returns those that are eligible for translation - either already sent or ready to be sent to translation

For example, you send a bundle to translation. Resolved items will help you to check which items from this bundle will be sent to translation such as bundle itself, or components, pages, or organizational items

GET /api/v3.0/translationJobs/{jobId}/resolvedItems Get resolved items for existing translation job.

This operation returns an instance of 'TmResolvedItem' type.

Parameters Cancel

Name	Description
jobId * required integer(\$int32) (path)	The ID of the translation job to get resolved items for. <input type="text" value="jobId"/>
includeItemsInvalidForTranslation boolean (query)	Include items that is not valid for translation. (Tridion.TranslationManager.OpenApi.V3.Dto.TmResolvedItem.Comment) property explains why item considered to be not valid for translation. <input type="text" value="false"/>
details string (query)	Specifies the level of details in the returned items. <input type="text" value="IdAndTitleOnly"/>

POST /api/v3.0/translationJob/resolveItems Get resolved items for new (unsaved) translation job.

This operation returns an instance of 'TmResolvedItem' type.

Parameters Cancel

Name	Description
translationJob * required object (body)	The translation job model to resolve items for. Edit Value Model <pre>{ "Id": 0, "Title": "string", "AddedItems": [{ "IdRef": "string", "Title": "string", "ItemTypeWithSubtype": "string", "ResolveOptions": ["TranslateContainerItems"] }], "ApplicableActions": [{ "Type": "HateoasLink", "Href": "string", "Rel": "string", "Type": "string" }] }</pre> Cancel

Support adding items to definition job

New endpoint *applicableJobs* added to support adding items into existing translation job in definition state

Returns list of jobs applicable for specified items

POST /api/v3.0/applicableJobs Gets an overview of translation jobs where a given set of items can be added to.

This operation returns an instance of 'TranslationJobOverview' type or one of the following inherited types:

- TranslationJob

Parameters Cancel

Name	Description
itemsIds * required array[string] (body)	The TCM/ECL URIs of items to add to a job. Edit Value Model
	<pre>["tcm:10-1653", "tcm:10-1654", "tcm:10-1655"]</pre>
	Cancel
	Parameter content type application/json
jobType string (query)	If specified (not None), only return jobs of this type (Push/Pull). None

Experience Space Application setting

Introduced *ExperienceSpace* Application setting

This setting will be used to store system wide customizable defaults for Experience Space, for example publish settings

Supports security where only system administrator can change or delete it

PUT /api/v3.0/applicationSettings Saves application settings with specified application Id

Parameters Cancel

Name	Description
applicationId * required string (query)	The id of an Application (case-insensitive). <input type="text" value="ExperienceSpace"/>
applicationSettings * required object (body)	Edit Value Model <pre>{ "\$type": "Settings", "Data": { "TestSetting": "Test value", "NestedSettings": { "TestNestedSettings": 555 } }, "PublishSettings": "RepublishOnly" }</pre> Cancel

Parameter content type

Force finish workflow process

New endpoint *forceFinishProcess*

Used to force finish workflow process of the given activity or process instance

Exposed *finishProcess* applicable action in activity instance, that is used to determine if the user can finish or revert the process

POST /api/v3.0/items/{escapedActivityOrProcessInstanceId}/forceFinishProcess Force finishes a Workflow Process.

This operation returns an instance of 'ProcessHistory' type.

Parameters Try it out

Name	Description
escapedActivityOrProcessInstanceId * required string (path)	The escaped TCM URI of the Process Instance to finish or of an Activity Instance for which to finish the Process Instance it is part of. <input type="text" value="escapedActivityOrProcessInstanceId"/>
approvalStatusId * required string (query)	The TCM URI of the Approval Status for all the items in the Workflow Process. <input type="text" value="approvalStatusId"/>
returnFullProcessHistory boolean (query)	If set to true, the full Process History which is created by finishing the Workflow Process is returned. If false (the default), only its identifier is returned. <i>Default value</i> : false <input type="text" value="false"/>

Responses Response content type

Preview rendered content

New endpoint *render*

Used to get rendered content source as it would be rendered during publishing

The screenshot shows an API documentation interface for a GET endpoint. At the top, the endpoint is identified as `GET /api/v3.0/items/{escapedItemId}/render` with a description: "Renders a given item." Below this, a note states: "This operation returns an instance of 'RenderedItem' type." The main section is titled "Parameters" and contains a table with three entries. Each entry includes the parameter name, its data type, and a description. The first parameter, `escapedItemId`, is marked as required and is a string path parameter with a text input field containing "escapedItemId". The second parameter, `templateId`, is an optional string query parameter with a text input field containing "templateId". The third parameter, `useDynamicVersion`, is a boolean query parameter with a dropdown menu set to "true". A "Try it out" button is located in the top right of the parameters section. At the bottom, the "Responses" section shows a dropdown menu for "Response content type" set to "application/json".

GET `/api/v3.0/items/{escapedItemId}/render` Renders a given item.

This operation returns an instance of 'RenderedItem' type.

Parameters Try it out

Name	Description
escapedItemId * required string (path)	The escaped TCM/ECL URI of the item to render. <input type="text" value="escapedItemId"/>
templateId string (query)	Optional TCM URI of a Template to render with. <input type="text" value="templateId"/>
useDynamicVersion boolean (query)	Specifies whether the dynamic version of the item should be rendered (if applicable). <i>Default value</i> : true <input type="text" value="true"/>

Responses Response content type `application/json`

Support workflow process definition editing

New endpoints

GET Workflow script types

GET Approval statuses

Rest API now has full support for workflow process definition editing

GET /api/v3.0/workflowScriptTypes Gets all workflow script types

This operation returns an instance of 'WorkflowScriptType' type.

Parameters Cancel

No parameters

Execute **Clear**

GET /api/v3.0/approvalStatuses Gets all Approval Statuses

This operation returns an instance of 'ApprovalStatus' type.

Parameters Cancel

Name	Description
details string (query)	Specifies the level of details of list entries. <input type="text" value="IdAndTitleOnly"/>

Execute **Clear**

Tridion Sites 10.5 Coming 2026

Primary Features:

- Agentic AI Extension Point
- Model Context Protocol Server

Everything TBD at the moment!

Model Context Protocol (MCP) Server

NEW

Context is: someone drops a bunch of unstructured images and text files on your desktop and now you've got to go through and figure out how to get the content into Tridion....

Could you help me to create news articles in Tridion using the data from my Text directory? Ask me for each step you will take.

Click to Edit

> Used 1 reference

I'd be happy to help you create news articles in Tridion using the data from your Text directory! Let me first understand what we're working with and then outline the steps I'll take.

Let me examine the text files in your Text directory to see what content we have:

✓ Read Text

I can see you have several text files that could be converted into news articles. Before proceeding, I need to understand your Tridion setup better. Here are the steps I propose to take:

Proposed Steps:

1. **Get available Tridion Publications** - I'll list the publications in your Content Manager to understand where to create the articles
2. **Identify the target Schema** - I'll need to find an appropriate Schema for news articles (or ask you to specify one)
3. **Identify the target Folder** - Determine where in the publication structure to create these articles
4. **Read the text file content** - Examine the content of each text file to understand the structure and format
5. **Create Components** - Convert each text file into a Tridion Component using the appropriate Schema
6. **Provide summary with links** - Show you the created articles with Experience Space links

Questions before I proceed:

1. **Which Publication** should I use for creating these news articles?
2. **Do you have a specific Schema** for news articles, or should I look for an appropriate one?
3. **Which Folder** should I create the articles in?
4. **Should I process all text files** (Air pollution.txt, Brewing Company.txt, Broadway Jones (performer).txt, Japan Air Lines Flight 123.txt, SMS Hindenburg.txt) or do you want to start with specific ones?

Should I start by listing your available publications to help answer these questions?

🔄 🔍 📄 🗑️

- Analyze new content
- Match with appropriate schemas
- Propose a plan
- Validate with one case
- Repeat for the other cases

Pluggable Intelligence (PI)

Allow customers to incorporate their own AI systems in the Content Lifecycle

Organizations have concerns about data privacy, customization, compliance, and cost control. This has led many to adopt self-hosted LLMs with enterprise standardized AI tools.

Today, using the Extension Framework, customers have been able to integrate AI into the platform. In Tridion Sites 10.5 we are going to expand the number of possible connection points and we will be shipping examples of how to incorporate enterprise standard AI solutions:

- Secure Generative AI for content authors to improve content and productivity
- Automated analysis of content to flag issues as part of workflow
- Deployer Extensions to notify AI systems of new enterprise content
- MCP Server

Why

- Content management is an **ideal** domain for the application of generative AI.
- **Strongly** aligns with RWS strategy and market trends.
- Will increase editor **efficiency** and boost ROI for our customers.
- Addresses a **wide range** of use cases offering better value than were we to invest in specific product features (e.g., find and replace, reporting).

What

- Agents (digital colleagues) mapped to user accounts in Tridion.
- Agents assigned tasks via Tridion Sites Workflow.
- Directed via natural language prompts and item metadata.
- Human-in-the-loop review/approval OTB.
- Limited set of OTB agents/workflows optimized and fine-tuned for specific tasks (e.g., Authoring Agent, Compliance Agent, Classification Agent).
- Customers can fine-tune agents and workflows for a wide variety of tasks.

Platform and Product Upgrade Considerations

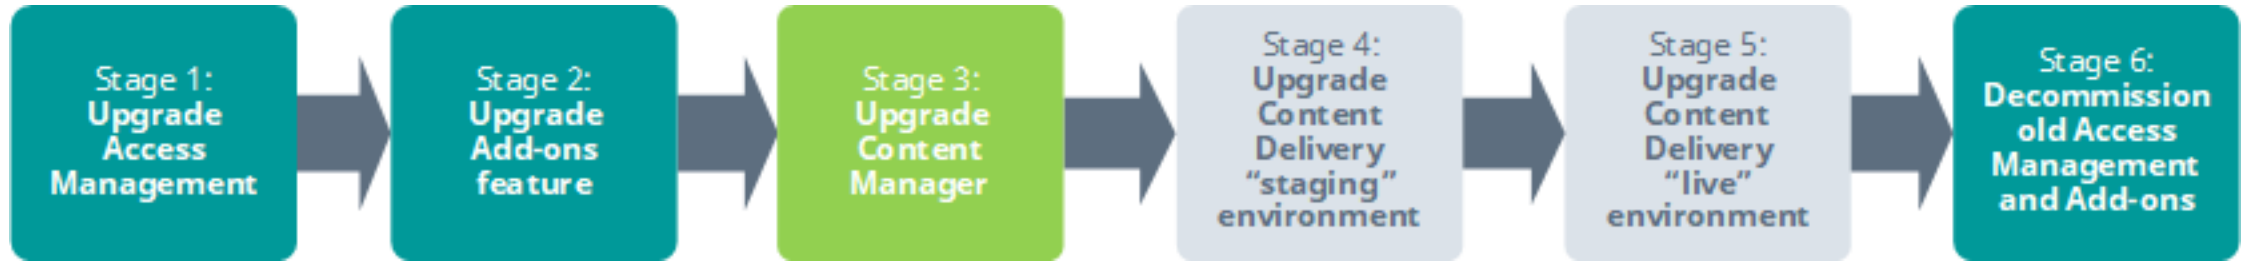

Upgrade overview

<https://docs.rws.com/en-US/tridion-sites-10-1-main-documentation-1174622/upgrading-tridion-sites-100494>

The 2 most common upgrade types are Staged and Rolling

The most important consideration is that if you wish to do a rolling upgrade it is always from the immediately preceding version. So for a rolling upgrade, you will have to go from **Sites 10 --> Sites 10.1**

Upgrade paths – Staged Upgrade

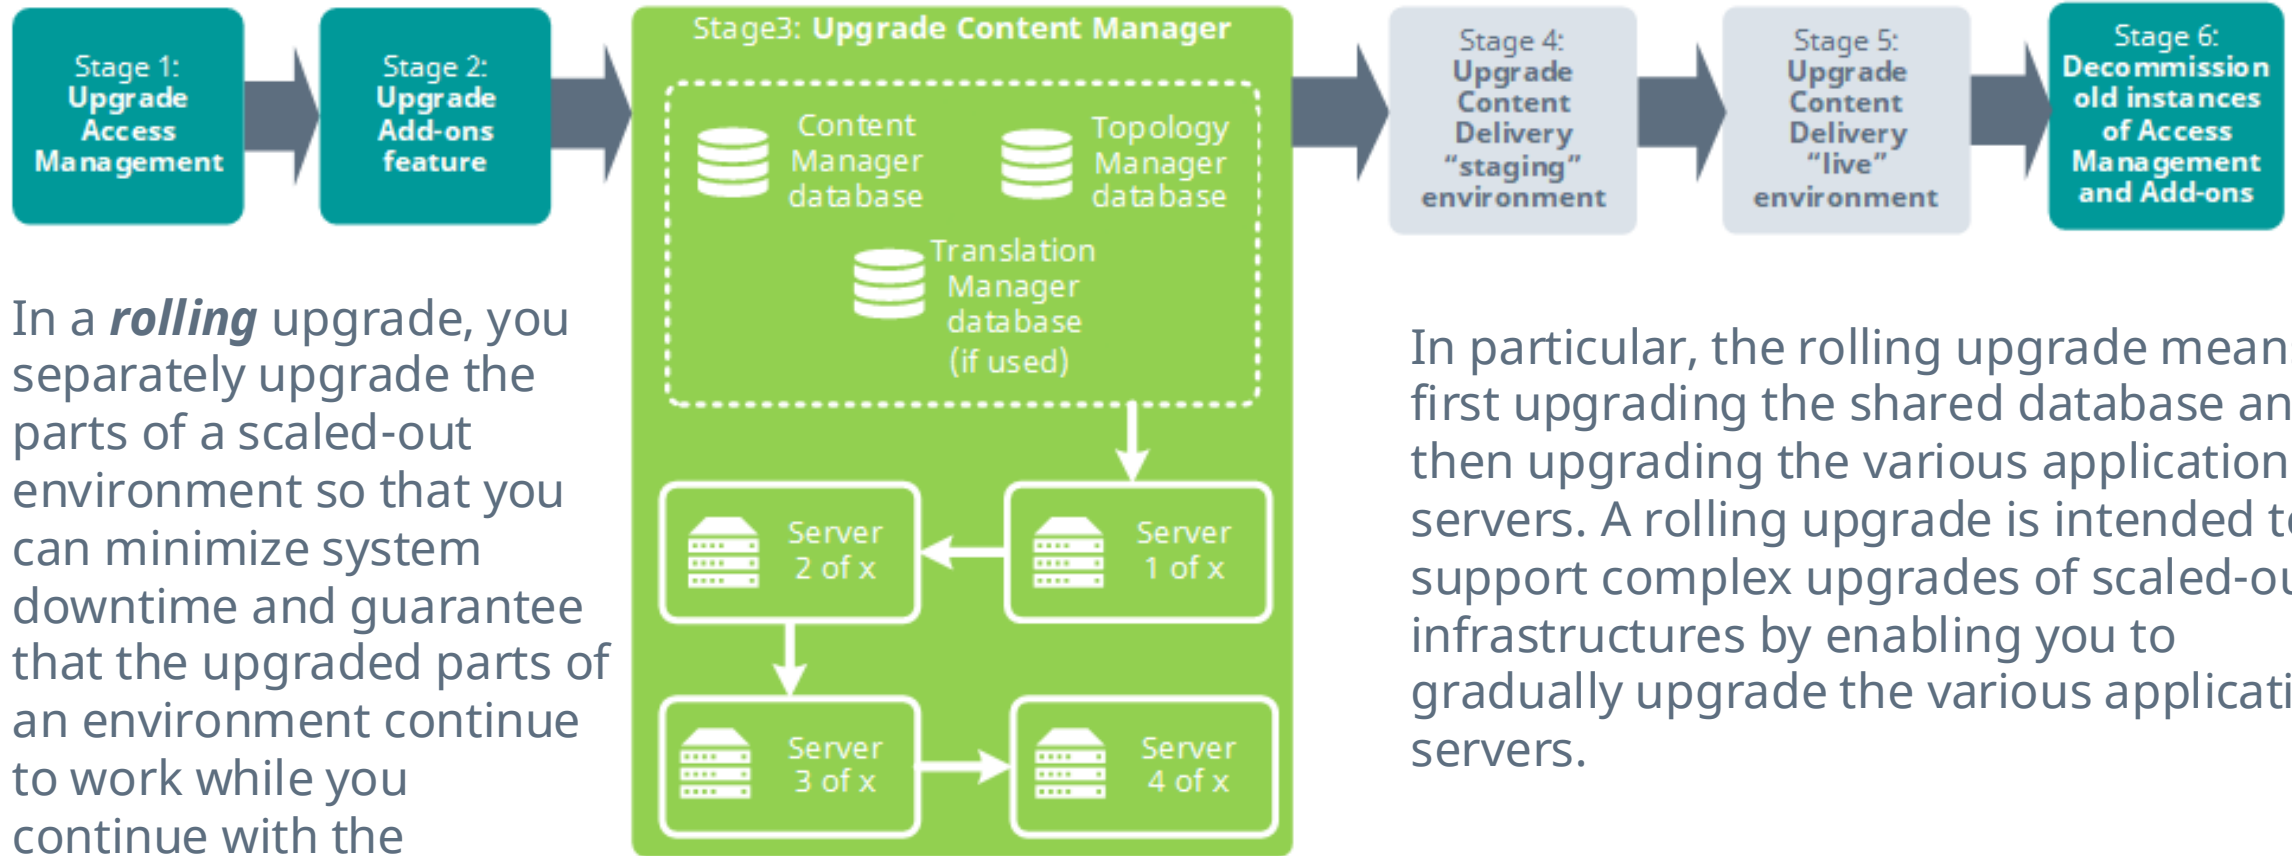

A ***staged*** upgrade is where you upgrade the different parts of your infrastructure at different times.

In a staged upgrade, you must upgrade Content Manager environment before you upgrade your Content Delivery environments.

After that, you can upgrade the individual Content Delivery environments in any order you wish.

Most organizations upgrade the product using a staged upgrade.

Upgrade paths – Rolling upgrade

In a **rolling** upgrade, you separately upgrade the parts of a scaled-out environment so that you can minimize system downtime and guarantee that the upgraded parts of an environment continue to work while you continue with the upgrade.

In particular, the rolling upgrade means first upgrading the shared database and then upgrading the various application servers. A rolling upgrade is intended to support complex upgrades of scaled-out infrastructures by enabling you to gradually upgrade the various application servers.

Functional and Technical Upgrade Considerations

Dynamic Experience Accelerator (DXA) Customers

For customers that are using the reference delivery application (DXA) there are some considerations:

- Sites 10 and Sites 10.1 require DXA 2.3
- Recommendation is to upgrade DXA 2.3 first and then update Content Management and then Content Delivery
- DXA 2.3 is backwards compatible with 9.1 and above
- Code:
 - <https://github.com/RWS/dxa-web-application-dotnet>
 - <https://github.com/RWS/dxa-web-application-java>

Move to Experience Space

In Sites 9.5, we introduced a brand new visual interface for content authors called, **Experience Space**. The old **Classic UI** is still available but we recommend that customers consider moving users to the new visual interface. It provides a modern editing experience and new features are being release only in **Experience Space**.

One factor to consider is that some customers have GUI extensions on the **Classic UI**. Our recommendation is to analyze:

1. Which extensions are no longer needed because the feature is supported natively
2. Which extensions are rarely used and can continue to live in the **Classic UI**
3. Which extensions should be migrated to **Experience Space** using the Extensions Framework that was introduced in Sites 10.

Streamlining the Content Model with BluePrinting 3.0

One consideration after your platform has been upgraded to Sites 10.1 is that BluePrinting 3.0 is going to allow for a far more efficient and simplified content model.

Our recommendation is to upgrade to 10.1 first but then leave some time to analyze which schemas can be streamlined using the new feature.

Our goal is that the conditional inheritance feature of BluePrinting 3.0 will allow for multiple schemas to be consolidated into a single one and will optimize scenarios for components that have both centralized and localized fields.

Moving to Trados Enterprise for Translations

While Tridion Sites 10.1 is still going to support integrations to TMS and WorldServer, we recommend moving to Trados Enterprise. It is a very modern platform that easily incorporates with AI linguistic tools like RWS Language Weaver.

Moving forward new features are going to be developed on Trados Enterprise so we recommend that customers start to make the move to the platforms. Some benefits of making the move:

1. Trados Enterprise has many **more features** for both translators and managers.
2. Trados Enterprise can better take advantage of machine translation (with or without human post-edit) to **lower translation costs**.
3. Trados Enterprise with the new Evolve capability can increase the **translation quality** by using AI tools.

Going Headless

Although Tridion has had a headless content hub since 9.0, it was really with the 9.6 release which introduced Semantic Content Models and Template-less Publishing that paved the way for a new and simpler way to work with Tridion's JSON output and the JavaScript frameworks like React, Vue, and Angular.

To go headless, customer will need to install the Dynamic Experience Delivery (DXD) content hub and then ensure that schema fields are set to publishable.

Access Management

If your organization has not yet migrated to the Access Management platform, you may consider doing so as part of the upgrade. This will allow you to take advantage of the new features allowing you to connect to various Identity Providers and better manage security across your Tridion Sites eco-system.

Documentation on how to proceed here:

<https://docs.rws.com/en-US/tridion-sites-10-1-main-documentation-1174622/tridion-access-management-768664>

Integration Framework and Extensions

The Integration Framework was released in Tridion Sites 9.1 and the Extension Framework was released in 10. One of Tridion's key benefits is that it is a platform that can be extended to provide a unique solution for your organization.

As part of the upgrade we recommend taking a look to see if there is any "low-hanging fruit" that could be integrated into the platform.

About us

RWS is a content solutions company, powered by technology and human expertise. We grow the value of ideas, data and content by making sure organizations are understood. Everywhere.

Our proprietary technology, 45+ AI patents and human experts help organizations bring ideas to market faster, build deeper relationships across borders and cultures, and enter new markets with confidence – growing their business and connecting them to a world of opportunities.

It's why over 80 of the world's top 100 brands trust RWS to drive innovation, inform decisions and shape brand experiences.

With 60+ global locations, across five continents, our teams work with businesses across almost all industries. Innovating since 1958, RWS is headquartered in the UK and publicly listed on AIM, the London Stock Exchange regulated market (RWS.L).
